Volume 13322

Proceedings of SPIE, 1605-7422, V. 13322

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Polarized Light and Optical Angular Momentum for Biomedical Diagnostics 2025*, edited by Jessica C. Ramella-Roman, Hui Ma, Tatiana Novikova, Daniel S. Elson, I. Alex Vitkin, Proc. of SPIE 13322, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

THEORY AND COMPUTATIONAL APPROACHES

- 13322 02 **Isotropic depolarization filter: outperforming biological samples imaging visualization via polarimetric data processing (Best Student Paper Award) [13322-6]**
- 13322 03 **Towards improved visualisation of polarisation-sensitive optical coherence tomography optical axis fields [13322-8]**

CLINICAL APPLICATIONS OF POLARIMETRY

- 13322 04 **Validation of a handheld polarized hyperspectral imaging probe on intralipid phantom and mouse tissue [13322-9]**
- 13322 05 **Enhanced oral bacterial discrimination by using Mueller matrix polarimetry [13322-11]**
- 13322 06 **Towards the prediction of spontaneous preterm birth by cervical collagen imaging using polarization-sensitive OCT [13322-12]**
- 13322 07 **Multimodal imaging of cervical structures during pregnancy (Best Student Paper Award) [13322-13]**

NOVEL APPROACHES

- 13322 08 **Monte Carlo modeling and experimental terahertz polarimetric imaging of tumor budding due to Mie scattering [13322-17]**
- 13322 09 **Propagation of light carrying orbital angular momentum through a turbid tissue-like scattering medium [13322-26]**

MACHINE LEARNING MODELS

- 13322 0A **Machine learning approach to 3x4 Mueller polarimetry for complete reconstruction of diagnostic polarimetric images of biological tissues [13322-20]**
- 13322 0B **Uncertainty-aware Mueller matrix polarimetry using Gaussian process pipeline (Best Student Paper Award) [13322-21]**

CLINICAL APPLICATIONS OF POLARIMETRY

- 13322 0C **Mueller matrix polarimetry for mouse brain tissue analysis [13322-24]**
- 13322 0D **Generated polarization-sensitive optical coherence tomography image using contrastive unpaired translation [13322-25]**

DIGITAL POSTER SESSION

- 13322 0E **Systematic fusion of polarization indices for improved characterization of complex anisotropic media [13322-7]**
- 13322 0F **Skin tissue classification based on Mueller matrix polarization imaging and machine learning [13322-22]**
