PROGRESS IN BIOMEDICAL OPTICS AND IMAGING Vol. 26 No. 38

Quantitative Phase Imaging XI

Yang Liu YongKeun Park Editors

25–27 January 2025 San Francisco, California, United States

Sponsored and Published by SPIE

Volume 13329

Proceedings of SPIE, 1605-7422, V. 13329

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings: Author(s), "Title of Paper," in *Quantitative Phase Imaging XI*, edited by Yang Liu, YongKeun Park, Proc. of SPIE 13329, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

ISSN: 1605-7422 ISSN: 2410-9045 (electronic)

ISBN: 9781510684065 ISBN: 9781510684072 (electronic)

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of fees. To obtain permission to use and share articles in this volume, visit Copyright Clearance Center at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher.

Printed in the United States of America by Curran Associates, Inc., under license from SPIE.

Publication of record for individual papers is online in the SPIE Digital Library.

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

• The first five digits correspond to the SPIE volume number.

• The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii Conference Committee

METHOD I

- 13329 02 Holographic incoherent-light-source quantitative phase imaging: an alternative to holographic tomography [13329-3]
- 13329 03 Exploiting spatiotemporal priors for motion-resolved computational microscopy (Gabriel Popescu Award) [13329-4]

ALGORITHM/AI I

- 13329 04 Wavelength-multiplexed multiplane quantitative phase imaging using a diffractive optical processor [13329-21]
- 13329 05 Single-shot quantitative phase gradient microscopy using physics-based untrained neural network phase retrieval [13329-22]

APPLICATION I

13329 06 Three-dimensional quantitative phase imaging for the evaluation of glioblastoma targeting CAR T-cell efficacy [13329-25]

APPLICATION II

- 13329 07 Intelligent holographic imaging flow cytometry for advanced single-cell analysis (Invited Paper) [13329-28]
 13329 08 Tracking ciliary development in three-dimensional airway organoids with reversed bipolarity with epi-mode 3D quantitative phase imaging [13329-29]
 13329 09 Evaluation of drug responses in acral melanoma cell lines using quantitative phase imaging [13329-33]
- 13329 0A Analysis of single cell nanoparticle uptake utilizing tomographic phase imaging and fluorescence microscopy [13329-36]

ALGORITHM/AI II

13329 OB Advances in lensless imaging based on machine learning using ray tracing [13329-39]

APPLICATION III

13329 OC	Label-free characterization of live migrasome using quantitative phase imaging [13329-42]
13329 OD	Direct quantitative phase retrieval in full-field transmission optical coherence tomography [13329-43]
	POSTER SESSION
13329 OE	Super-resolved digital in-line holography by a dielectric microsphere [13329-45]
13329 OF	Integrated quantitative phase microscopy for comprehensive cell analysis [13329-47]
13329 0G	Fourier imaging with a single-pixel correlation [13329-48]
13329 OH	Accelerated high-resolution 3D refractive index reconstruction using holographic incoherent-light-source QPI and deep learning [13329-50]
13329 01	Refractive index correlated pseudocoloring: enhanced visualization of thyroid cytology by merging holotomography with bright-field microscopy [13329-53]
13329 OJ	Deformable mirror characterization using novel phase tilted interferometry method [13329-55]
13329 OK	Quantitative assessment of chondrocyte response to inflammatory cytokines using interferometric quantitative phase microscopy [13329-60]
13329 OL	Novel characterization of borosilicate transparent wafers by using wave front phase imaging [13329-63]
13329 OM	Resolution enhancement of quantitative phase microscopy with vortex beam illumination [13329-66]
13329 ON	Time-lapsed analysis of organoid infection via epi-mode quantitative phase imaging [13329-67]
13329 00	Prospects and challenges of multiwell plates in automated high-throughput quantitative phase imaging with digital holographic microscopy [13329-69]
13329 OP	Quantitative phase estimation in 2D optical diffraction imaging using iterative blind deconvolution [13329-81]

- 13329 0Q Phase imaging through a single multimode fiber [13329-82]
- 13329 OR Nanoscale motion tracing and correlation analysis between cell parameters in human spermatozoa [13329-85]
- 13329 0S Advanced single-shot Moiré approach for high-resolution measurement [13329-89]
- 13329 0T High-resolution blind-phase retrieval technique for color interferometry [13329-90]
