SPIE

Volume 13338

Proceedings of SPIE, 1605-7422, V. 13338

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Frontiers in Biological Detection: From Nanosensors to Systems XVII*, edited by Amos Danielli, Benjamin L. Miller, Sharon M. Weiss, Proc. of SPIE 13338, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

SERS AND PLASMONICS I

- 13338 02 **Optomicrofluidic platforms for rapid and sensitive detection of biomarkers in medical diagnostics (Invited Paper)** [13338-1]

SERS AND PLASMONICS II

- 13338 03 **Beads-stacked nano-sieve for on-chip concentration and surface-enhanced Raman sensing of silver nanoparticles (Invited Paper)** [13338-6]

FLUORESCENCE AND MICROSCOPY

- 13338 04 **Single optical chemosensors for pattern-recognition-driven chemical sensing (Invited Paper)** [13338-9]
- 13338 05 **Printed paper-based optical sensor array devices (Invited Paper)** [13338-10]

NOVEL NANOMATERIAL-BASED SENSORS

- 13338 06 **Porous silicon-on-paper sensors: factors affecting biosensing performance** [13338-14]
- 13338 07 **Investigating angiotensin converting enzyme-2 and SARS CoV-2 spike protein interactions using a combined label-free and fluorescence detection approach** [13338-26]

INTEGRATED PHOTONIC SENSORS

- 13338 08 **PIC-based spectroscopic chemical sensing (Invited Paper)** [13338-15]
- 13338 09 **Photonic integrated circuit biosensors for sensing in complex media** [13338-16]
- 13338 0A **Study of foundry-compatible local evanescent array-coupled (LEAC) biosensor for COVID serology** [13338-17]

OTHER NOVEL OPTICAL SENSORS

- 13338 0B **Lambda theta reflectometry for protein biosensing** [13338-22]
- 13338 0C **Optical sensors for monitoring enzymatic activity (Invited Paper)** [13338-23]

POSTER SESSION

- 13338 0D **Enhanced fluorescence detection of tau protein using photonic crystal-based biochips: a novel tool for Alzheimer's disease diagnostics** [13338-27]
