Volume 13382

Proceedings of SPIE 0277-786X, V. 13382

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *MOEMS and Miniaturized Systems XXIV*, edited by Hans Zappe, Wibool Piyawattanametha, Yong-Hwa Park, Proc. of SPIE 13382, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii *Conference Committee*

CHIP-BASED PHOTONICS

- 13382 02 **Planar light valve: an 8192-channel MEMS-based spatial light modulator for high-speed amplitude and phase modulation (Invited Paper, Best Paper Award)** [13382-1]
- 13382 03 **A miniature photonic integrated pressure sensor based on a suspended waveguide Bragg grating** [13382-2]
- 13382 04 **A compact 2×2 optical gate using a silicon photonic MEMS dual-drive directional coupler** [13382-3]
- 13382 05 **Fabrication process of RF-photonic device with micro-transfer printing of III-V photodiode** [13382-4]

MICRO-IMAGING SYSTEMS

- 13382 09 **Self-written micro-lenses on fiber tips: investigation of the material parameters and optical behaviour** [13382-9]

LIDAR AND 3D IMAGING

- 13382 0A **MEMS scanners for integrating an optical cavity in a segmented ion trap for enhanced qubit readout** [13382-10]
- 13382 0B **Piezoelectric MEMS mirror based SPAD LiDAR system enabling real-time monitoring across large covered areas for smart factory applications** [13382-11]
- 13382 0C **Fast structured light engine for 3D image capture based on high-frequency MEMS scanning mirror** [13382-7]
- 13382 0D **Towards the modeling and control of a quasi-static 2D-MEMS vector scanner with a hybrid-integrated moving magnet drive** [13382-13]

SPECTROMETERS

- 13382 OE **Integrated, waveguide-based spectrometer for high-performance applications (Invited Paper)** [13382-14]
- 13382 OG **Modeling and compensation of backreflection signal in diffuse reflection optical MEMS spectrometers** [13382-16]
- 13382 OH **Miniaturized tuneable light source based on a digital micromirror device** [13382-17]

NOVEL MICRO-OPTICAL COMPONENTS

- 13382 OI **Integrated 512×320 micromirror array with novel lever-type piston-tip-tilt actuator (Invited Paper)** [13382-18]
- 13382 OJ **Wide-scanning-angle/diffraction-free quasistatic MEMS mirrors with back-side double-circular ribs** [13382-19]
- 13382 OK **Waveguide-coupled, broadband thermal emission enabled by a bulk-micromachined trench undercut** [13382-20]
- 13382 OL **An electromagnetic indirect-driving scanning mirror for wide-field coaxial LiDAR applications** [13382-21]

TUNABLE MICRO-OPTICS

- 13382 OM **Miniaturized electro-optical modulator based on substrate-free thin films** [13382-23]
- 13382 ON **Holographic photo-morphing of polymer surfaces for reprogrammable diffractive optics** [13382-26]

NOVEL MATERIALS AND PROCESSES

- 13382 OO **Light-orchestrated microdroplet reactors for enhanced solid-phase synthesis** [13382-27]
- 13382 OP **Structural coloring with low-index polymer meta-pixels by multipole-based design** [13382-28]
- 13382 OQ **Low-frequency spring-like MEMS for photoacoustic trace gas detection** [13382-29]
- 13382 OR **Glass-based micro-opto electromechanical systems manufactured by laser induced deep etching** [13382-30]

MEDICAL APPLICATIONS

- 13382 0S **Micromechanically bending membrane for curved SERS [13382-31]**
- 13382 0W **Nonlinear vibration-enhanced fiber-optic MEMS scanner and shape memory polymer catheter for potential microscopy application [13382-35]**

POSTER SESSION

- 13382 0Z **High-sensitivity colorimetric humidity sensor using nanostructured Fano resonator with ultra-wide color gamut (Best Student Paper Award) [13382-40]**
- 13382 10 **Design and development of a novel miniaturized 2D electro-optic scanner based on liquid crystal for potential micro display and head-mounted display applications [13382-41]**
