

PROCEEDINGS OF SPIE

***Quantum Computing,
Communication,
and Simulation V***

Philip R. Hemmer
Alan L. Migdall
Editors

25–30 January 2025
San Francisco, California, United States

Sponsored and Published by
SPIE

Volume 13391

Proceedings of SPIE 0277-786X, V. 13391

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Quantum Computing, Communication, and Simulation V*, edited by Philip R. Hemmer, Alan L. Migdall, Proc. of SPIE 13391, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

ISSN: 0277-786X

ISSN: 1996-756X (electronic)

ISBN: 9781510685307

ISBN: 9781510685314 (electronic)

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii *Conference Committee*

QUANTUM COMMUNICATION (SPACE-, FREE-, AND FIBER-BASED)

- 13391 02 **Space quantum communication networks (Invited Paper)** [13391-1]
- 13391 03 **Arbitrary unitary transformation over time-binned optical modes and the demonstration of superadditive communication** [13391-2]
- 13391 04 **Phase stabilization of high-bandwidth squeezed and entangled states over 1km distributed optical fiber** [13391-3]
- 13391 05 **Enhancements to quantum communication performance utilizing prototype photonic lanterns and multiplexed single-photon detection** [13391-4]
- 13391 06 **Temperature-insensitive source of polarization-entangled photon pairs through noncritical phasematching in single-domain KTiPO₄** [13391-5]
- 13391 07 **Steps towards integrating isolated parts and developing a joint time and frequency distribution fiber infrastructure in Europe (Invited Paper)** [13391-7]
- 13391 08 **Picosecond clock synchronization across a 7-node metropolitan scale quantum network (Invited Paper)** [13391-8]

QUANTUM COMMUNICATION AND QUANTUM INTERNET I

- 13391 09 **Efficient multiparty entanglement distribution with DODAG-X protocol** [13391-17]

QUANTUM COMMUNICATION AND QUANTUM INTERNET II

- 13391 0A **Towards a quantum-classical augmented network** [13391-20]
- 13391 0B **Metropolitan-scale quantum network using multimode fiber** [13391-21]
- 13391 0C **Compact and efficient optical parametric sources for quantum networking** [13391-26]
- 13391 0D **Multiphoton interference and quantum teleportation coexisting with classical communications in optical fiber (Invited Paper)** [13391-28]

QUANTUM COMMUNICATION AND QUANTUM INTERNET III

- 13391 OE **Ultracompact, VCSEL-based photon source for prepare-and-measure QKD** [13391-29]
- 13391 OF **Ultra-compact payload for a LEO-orbit based entanglement QKD mission using cubesats** [13391-30]
- 13391 OG **Frequency-bin entanglement-based quantum key distribution** [13391-34]
- 13391 OH **Simple quantum state tomography of single-photon entanglement** [13391-35]

QUANTUM ENABLED SECURITY

- 13391 OI **Twin-field QKD over a deployed optical network enabled by long-range phase locking and semiconductor detectors** [13391-37]

QUANTUM COMPUTATION I

- 13391 OJ **Architectures for quantum data center networks** [13391-44]
- 13391 OK **Key technologies toward ultra-fast optical quantum computers (Invited Paper)** [13391-47]

QUANTUM COMPUTATION II

- 13391 OL **Optimized quantum circuit partitioning across multiple quantum processors** [13391-48]

QUANTUM COMPUTATION III

- 13391 OM **Independent optical control of co-located ^{85}Rb and ^{87}Rb ensembles for quantum information processing** [13391-55]

QUANTUM INTERFACES AND TECHNOLOGY I

- 13391 ON **Superconducting 2.5D interposer for quantum processors** [13391-59]

QUANTUM INTERFACES AND TECHNOLOGY II

- 13391 OP **Crystalline waveguides for efficient integrated quantum memories** [13391-62]

QUANTUM SIMULATION

- 13391 0Q **Large-scale 2D mode couplers via liquid crystal metasurfaces** [13391-65]
- 13391 0R **Simple measurements and efficient optimization of linear optical networks** [13391-66]
- 13391 0S **Photon culling: a new photon subtraction approach with application to non-classical light generation** [13391-67]
- 13391 0T **Quantum algorithm for modeling confinement in nanostructures** [13391-68]
- 13391 0U **Relaxation of an out-of-equilibrium closed quantum systems: experimental observations of decay of turbulence and the stages to reach equilibrium (Invited Paper)** [13391-69]

QUANTUM REPEATERS AND QUANTUM CRYPTO

- 13391 0V **Single-photon Raman interaction for realizing the photon-number splitting attack** [13391-72]
- 13391 0W **Colloidal quantum dots grown from singly-doped seed clusters: a spin-photon interface for quantum memories and quantum repeaters** [13391-70]
- 13391 0X **A fast and robust quantum random number generator with a self-contained integrated photonic randomness core (Invited Paper)** [13391-71]
- 13391 0Y **Over 40 Gbps tri-type quantum random number generator** [13391-12]

SINGLE-PHOTON DETECTION COMPONENTS I

- 13391 0Z **Accurately modeling the recovery time of superconducting nanowire single-photon detectors as a function of bias current** [13391-75]
- 13391 10 **Photon distillation with reduced resource costs for fault-tolerant quantum computation** [13391-79]

SINGLE-PHOTON DETECTION COMPONENTS II

- 13391 11 **Interfacing superconducting nanowire single photon detectors with cryogenic opto-electronics in lithium niobate for quantum photonic applications (Invited Paper)** [13391-80]
- 13391 12 **A 24-mode laser-written universal photonic processor in a glass-based platform** [13391-81]

SINGLE-PHOTON DETECTION COMPONENTS III

- 13391 13 **Classical and non-classical regimes in four-wave mixing from an ensemble of cold two-level atoms** [13391-86]

POSTER SESSION

- 13391 14 **High spectral purity polarization entanglement source based on dual-element PPKTP waveguides** [13391-92]
- 13391 15 **Toward entanglement swapping between moving platforms** [13391-93]
- 13391 16 **Adaptive optics for single photons with parametrically varied emulated turbulence** [13391-94]

DIGITAL POSTER SESSION

- 13391 17 **Image compression using quantum wavelet transforms** [13391-96]
