Volume 13406

Proceedings of SPIE, 1605-7422, V. 13406

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:
Author(s), "Title of Paper," in *Medical Imaging 2025: Image Processing*, edited by Olivier Colliot, Jhimli Mitra, Proc. of SPIE 13406, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B … 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

xi *Conference Committee*

VISION-LANGUAGE AND FOUNDATION MODELS

13406 02 **Reinforcement-learning-based proactive medical dialogue system for health status and medical image collection** [13406-1]

13406 03 **Memorizing SAM: 3D medical Segment Anything Model with memorizing transformer** [13406-2]

13406 04 **CXR-DINO: paving the way for a medical vision foundation model through self-supervised learning in chest x-ray analysis** [13406-3]

13406 05 **ProtoSAM-2D: 2D semantic Segment Anything Model with mask-level prototype-learning and distillation** [13406-4]

BRAIN

13406 06 **TauFlowNet-V: predicting tau spreading dynamics and its implications in Alzheimer's disease pathology** [13406-5]

13406 07 **A 4D atlas of diffusion-informed spatial smoothing windows for BOLD signal in white matter** [13406-6]

13406 08 **Approximate diffusion tractography from FLAIR MRI and anatomical context using recurrent neural networks** [13406-7]

13406 09 **Tractography enhancement in clinically-feasible diffusion MRI using T1-weighted MRI and anatomical context (Best Student Paper Award)** [13406-8]

13406 0A **Counterfactual brain amyloid pathology image synthesis** [13406-9]

SEGMENTATION

13406 0B **PRISM Lite: a lightweight model for interactive 3D placenta segmentation in ultrasound** [13406-12]

13406 0C **Semi-supervised bone marrow lesion detection from knee MRI segmentation using mask inpainting models** [13406-11]

13406 0D **EPSCL: zero-shot segmentation with embedded pre-trained model and supervised contrastive learning on NIR-II vessel images** [13406-13]

13406 0E **coDice: connectivity-preserving dice loss for 2D/3D tubular structure segmentation** [13406-14]

TUESDAY MORNING KEYNOTES

13406 0F **Integrating computational approaches to unravel Alzheimer's disease and co-pathologies: a biomarker-driven approach to precision medicine (Keynote Paper)** [13406-504]

IMAGE SYNTHESIS AND GENERATIVE MODELS

13406 0G **Synthetic CT image generation for CBCT-guided lung radiotherapy using a diffusion model** [13406-15]

13406 0H **Robust body composition analysis by generating 3D CT volumes from limited 2D slices** [13406-16]

13406 0I **AdverX-Ray: ensuring x-ray integrity through frequency-sensitive adversarial VAEs (All-Conference Best Student Paper Award - Runner-Up)** [13406-17]

13406 0J **Beyond the lungs: extending the field-of-view in chest CT with latent diffusion models** [13406-18]

13406 0K **Feature extractor sensitivity in synthetic medical image evaluation** [13406-19]

TRANSFORMERS

13406 0L **Deep-learning-based outcome prediction from endoscopic videos for robot-assisted radical prostatectomy** [13406-20]

13406 0M **Reconstructing physiological signals from fMRI across the adult lifespan** [13406-21]

13406 0N **Advancing reliability in self-supervised transformer models through hierarchical mask attention heads** [13406-22]

13406 0O **Polyhedra encoding transformers: enhancing diffusion MRI analysis beyond voxel and volumetric embedding** [13406-23]

13406 0P **A novel attention-based network for geometry reconstruction with error estimation from medical images** [13406-24]

CARDIOVASCULAR IMAGING

13406 0Q **Attenuation artifact detection and severity classification in intracoronary OCT using mixed image representations** [13406-25]

13406 0R **Mitigating population drift in MACE risk prediction using causal reasoning** [13406-26]

13406 0S **Temporally consistent mitral annulus measurements from sparse annotations in echocardiographic videos** [13406-27]

DEEP DIVE

13406 0U **Self-supervised Mamba-based mastoidectomy shape prediction for cochlear implant surgery (Invited Paper)** [13406-29]

13406 0V **Multiple instance learning: attention to instance classification (Invited Paper)** [13406-30]

13406 0W **Bi-directional MS lesion filling and synthesis using denoising diffusion implicit model-based lesion repainting (Invited Paper)** [13406-31]

IMAGE RECONSTRUCTION AND ENHANCEMENT

13406 0X **Tiered sampling step sharing strategy for accelerating diffusion-based image restoration of multi-phasic CT** [13406-32]

13406 0Y **Boost the adversarial learning with Fourier regulator: bias-field correction on MRI** [13406-33]

13406 0Z **Rapid reconstruction of extremely accelerated liver 4D MRI via chained iterative refinement** [13406-34]

13406 10 **Enhancing retinal SELFF-OCT image quality: a deep-learning-based pipeline** [13406-35]

13406 11 **SRMapping: a super-resolution network with multi-level fine-grained feature fusion for cardiac MR T1 mapping** [13406-36]

EXPLAINABLE AND TRUSTWORTHY AI

13406 12 **Learning multimodal explainable AI models from medical images and tabular data: proof of concept** [13406-37]

13406 13 **Multi-factor debiasing for correlating confounders for fair diagnostic model** [13406-38]

13406 14 **Joint image clustering and self-supervised representation learning through debiased contrastive loss** [13406-39]

13406 15 **iCBIR-Sli: interpretable content-based image retrieval with 2D slice embeddings** [13406-40]

POSTER SESSION

13406 16 **Prediction of axillary lymph node metastasis in breast cancer using intraoperative fluorescence dual-modal imaging** [13406-41]

13406 17 **Segmentation of kidney ablation zone using deep learning in CT images** [13406-42]

13406 18 **Multi-objective deep-learning-based biomechanical deformable image registration with MOREA** [13406-43]

13406 19 **GaSpCT: Gaussian splatting for novel brain CBCT projection view synthesis** [13406-45]

13406 1A **Self-supervised learning for automated image quality assessment in endoscopy** [13406-46]

13406 1B **Enhanced prostate zone segmentation with multi-timepoint MRI: a cross-attention augmented 3D U-Net approach (Honorable Mention Poster Award)** [13406-47]

13406 1C **Divide to conquer: a field decomposition approach for multi-organ whole-body CT image registration (Best Student Paper Award - Runner Up)** [13406-48]

13406 1D **Self-supervised deformable registration of digital tomosynthesis and 3D CT images for surgical navigation** [13406-49]

13406 1E **Optimizing 3D UNet for real-time kidney segmentation in 3D ultrasound: a comparative study of loss functions** [13406-50]

13406 1F **CT cardiac image and label generation by a 3D latent diffusion model** [13406-51]

13406 1G **Segment Anything Small for ultrasound: enhanced segmentation of small anatomical structures using iterative point prompts and image transformations** [13406-52]

13406 1H **Domain-invariant feature learning in brain MR imaging for content-based image retrieval** [13406-53]

13406 1I **Evaluating the interpretability of prototype networks for medical image analysis** [13406-54]

13406 1J **Diffusion-based lung nodule synthesis for advanced evaluation of deep learning models** [13406-55]

13406 1K **Region of interest detection for efficient aortic segmentation** [13406-56]

13406 1L **Hybrid contour and distance-based loss for enhanced bladder and prostate segmentation in CT images** [13406-57]

13406 1M **Predicting anatomical structures from 2D depth images of patients** [13406-58]

13406 1N **Swin transformers are robust to distribution and concept drift in endoscopy-based longitudinal rectal cancer assessment** [13406-59]

13406 1O **Bridging the gap: enabling PyTorch3D and advanced dental imaging tools on Windows through WSL2** [13406-60]

13406 1P **MRI-derived skull parameters for early, normative, pediatric cranial evaluation using image synthesis** [13406-61]

13406 1Q **Domain-adaptive myocardial segmentation using multi-platform cine magnetic resonance images** [13406-62]

13406 1R **Multi-site segmentation of breast and fibroglandular tissue in MRI with a focus on clinical practicality** [13406-63]

13406 1T **MR-to-CT synthesis for cross-modality model adaptation** [13406-65]

13406 1U **End-to-end MPI image reconstruction with dual-task generative adversarial network** [13406-66]

13406 1V **Difference-map-enhanced dice loss for fetal brain segmentation** [13406-67]

13406 1W **Quantitative analysis of dynamic tau brain positron emission tomography (PET) imaging using cluster initialized factor analysis** [13406-69]

13406 1X **Localization of ear landmarks in head CT images using self-supervised anatomical embeddings** [13406-70]

13406 1Y **Deep-learning detection of phase-binning artifacts in 4DCT images** [13406-71]

13406 1Z **Longitudinal analysis of cerebellum volume changes in a multiple sclerosis cohort** [13406-72]

13406 20 **Diffusion semantic segmentation: a generative segmentation model based on joint distributions** [13406-73]

13406 21 **A technical assessment of latent diffusion for Alzheimer's disease progression** [13406-74]

13406 22 **Vasculature-informed spatial smoothing of white matter functional magnetic resonance imaging (All-Conference Best Student Paper Award - Finalist)** [13406-75]

13406 23 **Uncertainty-aware semi-supervised learning for enhanced multi-organ segmentation in CT volumes** [13406-76]

13406 24 **Introducing cosine similarity into the loss function: application to 3D vertebra segmentation** [13406-77]

13406 25 **Does SAM dream of EIG? Characterizing interactive segmenter performance using expected information gain** [13406-78]

13406 26 **Semi-supervised medical image segmentation based on cross-pseudo-supervised guidance with high-confidence pseudo labeling** [13406-79]

13406 27 **SemiOrth: a novel orthogonal dual network architecture for enhanced semi-supervised medical image segmentation** [13406-80]

13406 28 **Video-inspired lesion segmentation algorithm for OCT retinal images** [13406-81]

13406 29 **Spectral pixels as images: CNN-based pixel classification of 4D hyperspectral data for nerve and ligament differentiation** [13406-82]

13406 2A **SAM3D: zero-shot semi-automatic segmentation in 3D medical images with the segment anything model** [13406-84]

13406 2B **Recovery of GLRLM features in degraded images using deep learning and image property models** [13406-85]

13406 2C **Calibrating CT slice location and body part in body part regression** [13406-86]

13406 2D **Unique MS lesion identification from MRI (Cum Laude Poster Award)** [13406-87]

13406 2E **Score-based-diffusion-model-based synthetic CT generation from MR images and post-hoc uncertainty analysis** [13406-88]

13406 2F **A pseudo-3D multi attention mechanism for prostate zonal segmentation** [13406-89]

13406 2G **NCF: neural correspondence field for medical image registration** [13406-90]

13406 2H **Intermediate-image-guided unsupervised deformable image registration using a latent diffusion model** [13406-91]

13406 2I **Static and dynamic edge convolution for PointNet-based white matter fiber segmentation** [13406-92]

13406 2J **Automatic image unfolding and stitching framework for esophageal lining video based on density-weighted feature matching** [13406-93]

13406 2K **Heat residual U-Net: segmenting anatomical tissue layers depicted on 3D ultrasound images for cLBP** [13406-94]

13406 2L **Expanding training data for endoscopic phenotyping of eosinophilic esophagitis** [13406-95]

13406 2M **Automatic detection of standard anatomical planes of the fetal brain from 3D ultrasound volumes** [13406-96]

13406 2N **Is SAM 2 better than SAM in medical image segmentation?** [13406-97]

13406 2O **Synthetic data generation for modality-agnostic zero-shot promptable medical image segmentation** [13406-98]

13406 2P **OTID: optimal transport-based low-dose CT image denoising** [13406-99]

13406 2Q **Reliability of deep learning models for anatomical landmark detection: the role of inter-rater variability** [13406-100]

13406 2R **An intrinsically explainable approach to detecting vertebral compression fractures in CT scans via neurosymbolic modeling** [13406-101]

13406 2S **Self-supervised ultrasound video frame interpolation based on conditional latent diffusion model** [13406-102]

13406 2T **Centerline dice metric implementation is not streamlined** [13406-103]

13406 2U **Diffusion-based MR-to-CT translation of head and neck images** [13406-104]

13406 2V **Zero-shot surgical tool segmentation in monocular video using Segment Anything Model 2** [13406-105]

13406 2W **Zero-shot swift lung 4D CT segmentation via optimized Segment Anything Model** [13406-106]

13406 2X **Deep-learning-based automatic patient motion correction for 18F-flurpiridaz PET-MPI** [13406-107]

13406 2Y **TTT-Vnet: a 3D vision test-time training model for medical image analysis** [13406-108]

13406 2Z **Sparse measurement medical CT reconstruction using multi-fused block matching denoising priors** [13406-109]

13406 30 **Enhancing skin lesion classification using segmentation-based global-local feature fusion** [13406-111]

13406 31 **Exploring connections of spectral analysis and transfer learning in medical imaging** [13406-112]

13406 32 **Correlation ratio for unsupervised learning of multi-modal deformable registration** [13406-113]

13406 33 **Content-consistent adaptation network for substantia nigra segmentation in cross-modalities and -datasets scenarios without retraining** [13406-114]

13406 34 **Deep-learning framework for analysis of longitudinal MRI studies** [13406-115]

13406 35 **Semi-automatic anatomy segmentation in thoracic dynamic MRI based on Segment Anything Model** [13406-116]

13406 36 **PyCellMech: a shape-based feature extraction pipeline for use in medical and biological studies** [13406-83]

13406 37 **Improved detection of RPD using a network with multi-head attention layer** [13406-110]
