Optical Architectures for Displays and Sensing in Augmented, Virtual, and Mixed Reality (AR, VR, MR) VI

Naamah Argaman Hong Hua Daniel K. Nikolov Editors

27–28 January 2025 San Francisco, California, United States

Sponsored and Published by SPIE

Volume 13414

Proceedings of SPIE 0277-786X, V. 13414

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings: Author(s), "Title of Paper," in Optical Architectures for Displays and Sensing in Augmented, Virtual, and Mixed Reality (AR, VR, MR) VI, edited by Naamah Argaman, Hong Hua, Daniel K. Nikolov, Proc. of SPIE 13414, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of fees. To obtain permission to use and share articles in this volume, visit Copyright Clearance Center at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher.

Printed in the United States of America by Curran Associates, Inc., under license from SPIE.

Publication of record for individual papers is online in the SPIE Digital Library.

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

• The first five digits correspond to the SPIE volume number.

• The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

ix Conference Committee

MATERIAL AND COMPONENTS FOR XR TECHNOLOGY

- 13414 02High-refractive-index and low-birefringence polymers for XR applications [13414-1]
- 13414 03 Addressing sunlight reactivity in high-refractive-index nano-imprint lithography (NIL) resins [13414-3]
- 13414 04 Top-down fabrication of InGaN-based nano light-emitting diodes [13414-5]

METROLOGY AND INSPECTION I

13414 06	Minimizing stray light and crosstalk in wafer-level image quality measurements [13414-7]
13414 07	Process control metrology solutions for extended reality (XR) optical components [13414-8]
13414 08	Optical metrology for boresight and image quality of AR projectors [13414-9]
13414 09	A compact modulation transfer function colorimeter module [13414-10]

- 13414 0A Surface roughness of waveguide sidewalls measured by AFM [13414-12]
- 13414 OB Optimal measurement system for VR pancake optics [13414-13]
- 13414 0C Modified conoscopes for XR display inspection [13414-14]

DIFFRACTIVE WAVEGUIDES FABRICATION

- 13414 0D Scalable AR waveguide production via integrated inkjet printing and large-area nanoimprinting [13414-16]
- 13414 OE Inkjet coating combined with nanoimprinting for complex 3D patterns with nonlinear height and low residual layer [13414-20]

XR SYSTEM ARCHITECTURES

- 13414 OF High-efficiency light field synthesis by laser beam scanning [13414-23]
- 13414 0G Projection LCD backlighting for improved VR display contrast through a pancake lens while using much less power [13414-24]
- 13414 0H Design and demonstration of a varifocal occlusion-capable optical see-through headmounted display [13414-25]
- 13414 01 Large-view-volume cylindrical volumetric displays with anisotropic screen [13414-27]
- 13414 0J e-Tint lenses in augmented reality [13414-28]

COMBINER COMPONENTS, MATERIALS, AND PROCESSES

- 13414 0K Design of a full color single-plate waveguide combiner with high FOV [13414-29]
- 13414 OL Active eyebox waveguide combiner for augmented reality driven by electrowetting actuation [13414-31]

QUALITY, PERCEPTION, AND UTILITY

- 13414 0M MTF degradation of folded optic virtual reality and augmented reality systems due to lens/film surface quality and form error [13414-34]
- 13414 0N Addressing the quality challenges of prescription lensing for AR/MR devices [13414-35]
- 13414 00 Towards zero-th order free, full field of view, computer generated holography [13414-36]
- 13414 OP Usability of hyperstereo in stereoscopic imagery [13414-37]
- 13414 0Q XR for office productivity requirements specifications [13414-95]

COMBINER OPTICAL DESIGN AND SIMULATION

- 13414 OR Breaking in-coupling efficiency and uniformity tradeoff in waveguide-based AR displays with polarization volume gratings [13414-38]
- 13414 05 Enhancing augmented reality experience: minimizing p-polarized light reflectance in birdbath optics for AR glasses [13414-40]

- 13414 0T First-order waveguide design for AR [13414-41]
- 13414 0U A comparative study of global optimization algorithms in diffractive waveguide design [13414-42]
- 13414 0V Effective Mueller matrix analysis in VR systems using Ansys Zemax OpticStudio [13414-43]

EYE TRACKING, HEAD TRACKING, AND DEPTH

- 13414 0W Bifocal polarization-sensitive metalens for rapid BRDF estimation [13414-44]
- 13414 0X vHOE gratings for eye tracking module integration in waveguides [13414-45]
- 13414 0Y Eye position prediction using adaptive and scaled motion information for low-crosstalk 3D display [13414-46]
- 13414 0Z Recent advances in deflectometric eye tracking: a novel concept for fast and accurate gaze estimation [13414-47]
- 1341410 High-precision six DOF head tracking using deep-learning-based ellipse detection [13414-49]
- 13414 11 An iToF/triangulation depth sensor for mixed reality applications [13414-50]

TRANSPARENT CMOS, ULEDS, AND OLEDS

- 13414 12 Semi-transparent CMOS backplane for advanced near-to-eye micro-displays [13414-51]
- 13414 13 Ultrahigh definition and color-crosstalk-addressing AR/VR/MR displays using innovative micro-LED technology [13414-52]
- 1341414 Optimizing quantum dot color conversion efficiency for AR displays: analysis of pattern geometry, film thickness, and reflective structures [13414-53]
- 1341415 Multiple stacked monochrome OLEDs for high-brightness micro-display applications [13414-54]

LCOS AND LBS

13414 16Addressing crosstalk in spatial-multiplexing light field displays using polarization [13414-55]13414 17Software-defined laser beam scanner display for high-volume augmented reality
applications [13414-60]

	POSTER SESSION
13414 18	Integration of wafer and plate-based NIL for scalable manufacturing of high-quality AR waveguides [13414-64]
13414 19	Impact of wafer wedge and layout on AR waveguide image quality [13414-65]
13414 1B	Content-adaptive targeting scheme for holographic displays [13414-67]
13414 1C	PVH waveguides for commercial smart glasses [13414-71]
13414 1D	Diffractive AR waveguide made by injection molding [13414-73]
13414 1E	Wireframe holography as a new method for augmented reality projection [13414-75]
13414 1F	Comprehensive latency testing for head-mounted displays [13414-79]
13414 1G	Additive full-wafer fabrication of all-inorganic metalenses, waveguides, and diffractive optics for visible and IR applications via direct nanoimprint lithography [13414-80]
13414 1H	Simulation tool for holographic-based augmented reality eyewear [13414-81]
13414 11	Real-time LBS pixel timing synchronization [13414-82]
13414 1J	Large field-of-view in LBS systems [13414-83]
13414 1K	Small and scalable laser source for AR glasses by flip-chipping of bare laser diode in silicon nitride PIC technology [13414-84]
13414 1L	Dimensional stability in UV imprint resins of working stamp for producing augmented reality waveguides: from a master mold to final products [13414-85]
13414 1M	Expanding perception: repurposed passthrough VR goggles for UV-NIR visualization in optical research [13414-86]
13414 1N	Aspheric and freeform metrology solutions for production control of virtual reality head- mounted displays [13414-88]
13414 10	Demonstration of unified metalens workflow through design and manufacture of example eye-tracking meta-optic [13414-89]
13414 1P	Critical dimension metrology and fitting models for polarization volume hologram grating based on liquid crystal polymer [13414-92]
13414 1R	Self-aligned double-sided grating diffractive waveguide with enhanced efficiency [13414-99]

- 13414 15 Wave-guide couplers based on holograms recorded in high-environmentally-compatible photopolymer comparison with other materials [13414-100]
- 13414 1W Contact lens with moiré labels for precise eye tracking [13414-105]
- 134141X Expanding field-of-view for XR technology: 120-140° [13414-108]
