# TABLE OF CONTENTS

|                                                                                                                                                             |    |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| Versatile Controller Architecture for a Universal DC Fast Charging Front-End .....                                                                          | 1  |
| <i>Anurag Singh, Sayan Paul, Tejas Bhuse, Trent Martin, Hien Nguyen, Inder Vedula, Nikola Milivojević, Dragan Maksimović, Luca Corradini</i>                |    |
| A 10 kV SiC MOSFET based Three-Phase Single-Stage Isolated MVAC/LVDC Converter for Solid State Transformer Applications .....                               | 9  |
| <i>Anup Anurag, Chi Zhang, Rudy Wang, Peter Barbosa</i>                                                                                                     |    |
| Direct Digital Control Applied to T-Type Vienna Rectifiers for Power Factor Correction.....                                                                 | 16 |
| <i>Jun-Yang Chang, Tsai-Fu Wu, Chien-Chih Hung, Jui-Yang Chiu</i>                                                                                           |    |
| Active Power Decoupling Method based on Dual Active Bridge Converter without Additional Components.....                                                     | 21 |
| <i>Kosuke Takeuchi, Takashi Ohno, Hiroki Watanabe, Yuki Nakata, Jun-Ichi Itoh</i>                                                                           |    |
| An ANPC-Based Building Block for Medium-Voltage Applications.....                                                                                           | 27 |
| <i>Ahmed Rahouma, Hui Cao, David A. Porras, Zhuxuan Ma, Yue Zhao, Juan C. Balda</i>                                                                         |    |
| Analog Control of a 2.5 kW GaN based CRM PFC with Input Filter Optimization .....                                                                           | 34 |
| <i>Naveed Ishraq, Ayan Mallik</i>                                                                                                                           |    |
| An iTHD and Efficiency Optimized Control Method for Triangular Conduction Mode Totem Pole Bridgeless PFC with Zero Current Detection.....                   | 42 |
| <i>Brent McDonald, Sheng-Yang Yu</i>                                                                                                                        |    |
| Resonance Current Suppression for AC-DC Active-Clamp Flyback Converter by Triangular Current Mode .....                                                     | 48 |
| <i>Yasuo Uchida, Hiroki Watanabe, Jun-Ichi Itoh</i>                                                                                                         |    |
| A Universal DC Fast Charging Front-End with Optimized Film Capacitor Design.....                                                                            | 54 |
| <i>Sayan Paul, Anurag Singh, Tejas Bhuse, Trent Martin, Hien Nguyen, Inder Vedula, Nikola Milivojević, Dragan Maksimović, Luca Corradini</i>                |    |
| Power Characterization of a 1200-V/800-V 22-kVA 30-kHz Unity-Gain Dual-Active-Bridge Converter Prototype.....                                               | 62 |
| <i>Radhika Sarda, Abishek Sethupandi, Madasamy Palavesha Thevar, Howe Li Yeo, Praveenkumar Palani, Vaisambhayana B. Sriram, Anshuman Tripathi</i>           |    |
| Design of Fully Soft-Switched Semi-Dual Active DC-DC Converter for Battery Charging Application .....                                                       | 69 |
| <i>Siva Prabhakar, Shiladri Chakraborty, Sandeep Anand</i>                                                                                                  |    |
| A ZCS-ZVS Strategy for Low Impedance Dual Active Bridges in MHz Range.....                                                                                  | 77 |
| <i>Pushkar Saraf, Michael Solomentsev, Alex Hanson</i>                                                                                                      |    |
| A 6.6 kW Highly Efficient Reconfigurable Dual Active Bridge Converter Designed using Planar Transformer, SiC-Fets and Monolithic Bidirectional Devices..... | 90 |
| <i>Reza Barzegarkhoo, Fabian Groon, Arkadeb Sengupta, Marco Liserre</i>                                                                                     |    |
| Interleaved Switched-Inductor-Based SIPO Partial Power Converter Module for Battery Management Systems.....                                                 | 98 |
| <i>Fengwang Lu, Henry Shu-Hung Chung</i>                                                                                                                    |    |

|                                                                                                                                                                                          |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Single Sensor-Based Fault Localization and Detection in GaN Three-Phase Dual Active Bridge Converters .....                                                                              | 103 |
| <i>Satyam Sa, Yi Han, Cheng Feng Wang, Olivier Trescases</i>                                                                                                                             |     |
| Enhanced Cocharge Operation Scheme in Bidirectional PhaseShift Full-Bridge Converters with Eliminated Voltage Overshoot and Reduced Freewheeling Current.....                            | 111 |
| <i>Tien-Sheng Li, Minh Ngo, Rolando Burgos, Dong Dong</i>                                                                                                                                |     |
| DC Bias Elimination in Isolated DC-DC Converters using Fundamental-Frequency Ripple .....                                                                                                | 118 |
| <i>Arkadeb Sengupta, Thiago Antonio Pereira, Marco Liserre</i>                                                                                                                           |     |
| Tunable Matching Network with Dual Phase-Switched Impedance Modulation Actuators.....                                                                                                    | 124 |
| <i>Alexander Jurkov, David Perreault</i>                                                                                                                                                 |     |
| Soft-Switched Pulsed Bias Plasma Supply System .....                                                                                                                                     | 132 |
| <i>Julia Estrin, Alexander Jurkov, David J. Perreault</i>                                                                                                                                |     |
| Analysis and Design of a Cyclo-Active-Bridge Inverter for Single-Stage Three-Phase Grid Interface.....                                                                                   | 139 |
| <i>Mian Liao, Tanuj Sen, Yang Wu, Minjie Chen</i>                                                                                                                                        |     |
| Modular Nanosecond Pulse Generator Leveraging GaN and SiC for Versatility and Performance .....                                                                                          | 147 |
| <i>P. Briz, H. Sarnago, O. Lucía</i>                                                                                                                                                     |     |
| A Variable Frequency Technique for EMI and Efficiency Improvements in High-Level Count Flying Capacitor Multilevel Converters .....                                                      | 151 |
| <i>Francesca Giardine, Sahana Krishnan, Logan Horowitz, Robert C. N. Pilawa-Podgurski</i>                                                                                                |     |
| Analysis and Implementation of Minimum-Sensor Capacitor Voltage Estimators for Flying Capacitor Multilevel Converters .....                                                              | 157 |
| <i>S. Tahmid Mahbub, Rahul K. Iyer, Ivan Z. Petriæ, Robert C. N. Pilawa-Podgurski</i>                                                                                                    |     |
| Single-Stage Bidirectional High-Frequency Link DC to Three-Phase AC (4-Wire) Grid-Tied Microinverter.....                                                                                | 164 |
| <i>Aniruddh Marellapudi, Satish Belkhode, Joseph Benzaquen Sune, Deepak Divan</i>                                                                                                        |     |
| Analysis and Design of a Constant Current LCC Class-E Inverter.....                                                                                                                      | 171 |
| <i>Ju Gao, Ziheng Liu, Jiayin He, Hongjie Peng, Chengkang Ao, Jinyan Wang</i>                                                                                                            |     |
| Series Connected Class-E Push-Pull Converters using GaN HEMT for High-Efficiency RF Generators in Float Zone Silicon Production .....                                                    | 175 |
| <i>Faheem Ahmad, Thore Stig Aunsborg, Jannick Kjær Jørgensen, Stig Munk-Nielsen</i>                                                                                                      |     |
| State of the Art 1.7kV Lateral GaN HEMTs, an Alternative to SiC .....                                                                                                                    | 180 |
| <i>Karthick Murukesan, Robert Yang, Kamal Varadarajan, Sorin Georgescu, Doug Kang</i>                                                                                                    |     |
| Modeling and Characterization of Current and Future 1.2 kV Wide Bandgap Semiconductor-Based MOSFETs.....                                                                                 | 185 |
| <i>Sushanta Gautam, Austin M. Szczublewski, Samuel K. Atwimah, Aidan P. Fox, William M. Collings, Tolen Nelson, Daniel G. Georgiev, Raghav Khanna, Andrew D. Koehler, Karl D. Hobart</i> |     |
| 2.5-kV 6.4-ns 100-kHz Repetitive GaN Marx Generator.....                                                                                                                                 | 192 |
| <i>Ruize Sun, Ci Pan, Wanjun Chen, Bo Zhang</i>                                                                                                                                          |     |
| Novel Dual Output LDO Architecture in 650-V GaN Technology for Power ICs .....                                                                                                           | 195 |
| <i>Plinio Bau, Thanh Hai Phung, Deniz Aygun, Bart Coomans, Mike Wens</i>                                                                                                                 |     |

|                                                                                                                                                                                        |     |
