Volume 13413

Proceedings of SPIE, 1605-7422, V. 13413

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Medical Imaging 2025: Digital and Computational Pathology*, edited by John E. Tomaszewski, Aaron D. Ward, Proc. of SPIE 13413, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii *Conference Committee*

SEGMENTATION OF CELLULAR AND TISSUE STRUCTURES I

- 13413 02 **Prior-guided diffusion model for cell-level segmentation in quantitative phase imaging**
[13413-1]
- 13413 03 **Semi-supervised semantic segmentation of cell nuclei with diffusion model** [13413-2]
- 13413 04 **Automated segmentation of intracranial carotid atherosclerosis in histological images:
assessing the effect of staining** [13413-3]
- 13413 05 **AI-based pipeline for automatic quantification of tissue ingrowth in histopathology images
of cerebral aneurysm** [13413-4]
- 13413 06 **Temporal resolution enhancement for cell tracking in microscopy image sequences**
[13413-5]

SEGMENTATION OF CELLULAR AND TISSUE STRUCTURES II

- 13413 07 **Towards fine-grained renal vasculature segmentation: full-scale hierarchical learning with
FH-Seg (All-Conference Best Student Paper Award - Finalist)** [13413-6]
- 13413 08 **Cell type prediction for intestine tissue samples from brightfield histology via deep learning**
[13413-7]
- 13413 09 **Cross-species data integration for enhanced layer segmentation in kidney pathology**
[13413-8]
- 13413 0A **Automated organ subregion segmentation in whole slide images using deep learning**
[13413-9]

AUTOMATED QUANTIFICATION OF TISSUE BIOMARKERS

- 13413 0B **Computational quantification of inflammatory impact in preclinical models via digitized
murine histopathology** [13413-10]
- 13413 0C **Comparative analysis of multiplex microscopy images of human renal biopsy tissue**
[13413-11]

- 13413 OD **A machine learning approach for analyzing texture and morphometry markers of glioblastoma TERT promoter mutations in DAPI fluorescence images** [13413-12]
- 13413 OE **Automated quantification of TP53 using digital immunohistochemistry for acute myeloid leukemia prognosis** [13413-13]
- 13413 OF **Region of interest detection on breast immunohistochemistry images for end-to-end Ki-67 biomarker quantification** [13413-14]

GRADING, CLASSIFICATION, AND DIAGNOSIS

- 13413 OH **Renal cell type and state estimation in brightfield histology images: a pilot study on diabetic nephropathy** [13413-15]
- 13413 OI **Enhancing predictive accuracy of allograft outcomes: beyond traditional clinical and biopsy scoring methods** [13413-16]
- 13413 OJ **Unravelling the topographical organization of brain lesions in variants of Alzheimer's disease progression** [13413-17]
- 13413 OK **Outcome prediction of prostate cancer patients on active surveillance using weakly supervised deep learning** [13413-18]
- 13413 OL **Instruction tuning for colorectal histopathology: a multimodal vision-language assistant on human-evaluated data** [13413-19]

MODEL INTERPRETABILITY

- 13413 OM **Explainable feature embeddings from histopathology foundation models: a case study for end stage kidney disease risk analysis in diabetic nephropathy patients** [13413-20]
- 13413 ON **A human-in-the-loop framework for refining deep learning models in pathology segmentation** [13413-21]
- 13413 OO **Hand-crafted feature-guided histologic image classification via weak-to-strong generalization** [13413-22]
- 13413 OP **Clinically interpretable imaging biomarker discovery in BCG-vaccinated *mycobacterium tuberculosis*-infected diversity outbred mice using deep learning** [13413-23]

MULTISTAIN AND MULTISPECTRAL IMAGING AND ANALYSIS

- 13413 OQ **Identifying cellular neighborhood phenotypes differentiating normal and quiescent Crohn's disease via MxIF (All-Conference Best Student Paper Award - Finalist)** [13413-24]
- 13413 OR **Exclusive loss in segmentation for the virtual multiplex immunohistochemistry using multiple singleplex masks** [13413-25]

- 13413 OS **Optimization of transfer learning of foundation models for hyperspectral histologic imaging** [13413-26]
- 13413 OT **A spatial-spectral vision transformer model for head and neck cancer detection with hyperspectral, RGB, and synthesized RGB histologic images** [13413-27]
- 13413 OU **Quantitative analysis of colonic epithelial cell aging in a cell-cycle-like model: changes in nucleus and cytoplasm along the crypt axis** [13413-28]

STANDARDIZATION, MULTIMODAL ANALYSIS, AND SYNTHETIC DATA GENERATION

- 13413 OV **Out-of-distribution generalization based on normalization techniques in histopathology whole slide imaging** [13413-29]
- 13413 OW **Quantification and mitigation of site-specific differences in digital pathology datasets** [13413-30]
- 13413 OX **Texture analysis of lung cell surface morphology after nanoparticle exposure** [13413-32]

POSTER SESSION

- 13413 OY **Bright-field dark-field hyperspectral imaging for pixel-wise classification of adenocarcinoma of the colon in the liver** [13413-34]
- 13413 OZ **GLAM: glomeruli segmentation for human pathological lesions using adapted mouse model** [13413-35]
- 13413 IO **Cross-organ deployment of EOS detection AI without retraining: feasibility and limitation** [13413-36]
- 13413 I1 **Initial study toward three-dimensional visualization of histopathological annotation of prostate cancer** [13413-37]
- 13413 I2 **Integration of spatial transcriptomics and immunofluorescence staining to enable colocalized multiomics analysis in chronic liver disease** [13413-38]
- 13413 I3 **SLRBC: self-supervised learning for red blood cell segmentation and classification with a biased contrastive loss** [13413-39]
- 13413 I4 **Effect of neutrophil extracellular traps on thrombolysis by tPA characterized by clot mechanical properties and CT radiomics** [13413-40]
- 13413 I5 **Evaluating deep learning models for breast cancer classification: a comparative study** [13413-41]
- 13413 I6 **Replicability of large-scale studies in computational pathology** [13413-42]

- 13413 17 **An automatic processing framework for hyperspectral histologic images and benchmark dataset (Cum Laude Poster Award) [13413-43]**
- 13413 18 **ComPrePS 2.0: enabling massive-scale distributed computing on high-performance computing cluster for histopathological data processing (Honorable Mention Poster Award) [13413-44]**
- 13413 19 **The IPATH dataset: training CLIP models with histopathology-based image-caption pairs from Instagram [13413-45]**

DIGITAL POSTER SESSION

- 13413 1A **Multimodal pretraining for histology-gene joint representation learning [13413-31]**
