SPIE

Volume 13428

Proceedings of SPIE 0277-786X, V. 13428

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Advances in Patterning Materials and Processes XLII*, edited by Ryan Callahan, Anuja De Silva, Proc. of SPIE 13428, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

ix *Conference Committee*

AWARDS, KEYNOTES AND EUV RESISTS

- 13428 03 **An integration engineering approach to material design and development (Keynote Paper)** [13428-2]
- 13428 04 **A comprehensive analysis to quantify the performance evolution of EUV photoresists** [13428-3]

NOVEL PATTERNING MATERIALS I

- 13428 06 **Next-generation EUV photoresists-based on chain-unzipping polymers** [13428-5]
- 13428 07 **Synthesis of polystyrene-block-poly(3-hydroxy-1-methacryloyloxyadamantane) (PS-b-PHAdMA) via RAFT polymerization and application for next generation lithography** [13428-6]
- 13428 08 **Positive-tone tin-oxo nanoclusters for extreme UV lithography** [13428-7]
- 13428 09 **High-performance metal organic cluster resists for high-NA extreme ultraviolet lithography** [13428-8]
- 13428 0A **New generation spin on carbon for device scaling** [13428-78]

NOVEL PROCESSES

- 13428 0B **Evaluation of developers based on automatic classification of line-and-space pattern SEM images** [13428-10]
- 13428 0D **Logic patterning and roughness improvement applications with directional ion beam etch** [13428-13]
- 13428 0F **Functional surface treatment primer (FSTP®) meet on new advanced lithographic technologies** [13428-15]

LOW-NA EUV

- 13428 0G **The impact of polymer compositional homogeneity on lithography and defects** [13428-16]

- 13428 OH **Tight-pitch contact-hole patterns in EUV lithography** [13428-17]
- 13428 OI **Exploring stochastic reduction and lithographic performance by using EUV CAR-NTD**
[13428-18]
- 13428 OJ **Low-NA EUV extension technology of contact patterning using MOR process** [13428-19]
- 13428 OK **NA0.33 EUV extension for HVM: single-patterning 28nm metal pitch logic technology**
[13428-20]

NON CAR AND METAL OXIDE RESISTS

- 13428 OM **EUV lithography using multi-trigger resist: performance improvements** [13428-22]
- 13428 OO **A novel platform of positive-tone organoantimony resists for EUV** [13428-24]
- 13428 OP **Metal oxide resist formulation and process advancements towards high-NA EUV lithography** [13428-25]
- 13428 OQ **Development of a negative EUV photoresist system** [13428-26]

EFFORTS TOWARDS HIGH-NA EUV

- 13428 OR **Overlay distortion caused by backside defects: needs for improved track integrated backside cleaning towards high-NA EUV** [13428-27]
- 13428 OT **Patterning optimization for single exposure BLP and SNLP DRAM layers with 0.33NA and 0.55NA EUV lithography** [13428-29]
- 13428 OV **Improvement of non-PFAS biomass EUV resist for high-NA EUV lithography** [13428-31]

PROGRESS IN PFAS FREE MATERIALS

- 13428 OW **PFAS free materials and resist for ArF immersion photolithography** [13428-32]
- 13428 OX **PFAS substitution in photolithography materials: strategies and progress** [13428-33]
- 13428 OY **Treatment of PFAS substances in lithography** [13428-34]
- 13428 OZ **Evaluation of a non-PFAS and non-fluorine KrF resist used in semi-conductor manufacturing**
[13428-35]

- 13428 11 **Patterning performance of perfluoroalkyl substances (PFAS) free EUV chemically amplified resists: a step towards environmentally friendly lithographic chemicals** [13428-37]

TOP COATS AND UNDERLAYERS

- 13428 12 **Novel post treatment process to enhance spin-on carbon film properties** [13428-38]
- 13428 14 **Light-curing as an energy-efficient alternative for thermal underlayer processing in ArF immersion lithography** [13428-40]
- 13428 15 **Understanding the role of underlayers in enhancing EUV resist sensitivity** [13428-41]
- 13428 16 **Functional underlayers and primers improving dose and defectivity after lithography and after etching** [13428-42]

RESIST FUNDAMENTALS I

- 13428 18 **Impact of plasma vacuum ultraviolet photons on ultrathin resists for EUV lithography** [13428-44]
- 13428 1A **Effects of polymer molecular weight and monomer concentration variations on resist stochastics and molecular segregation** [13428-46]
- 13428 1B **Investigating crosslinking mechanisms in metal oxide photoresists for EUV lithography: a first principles study** [13428-47]

RESIST FUNDAMENTALS II

- 13428 1C **Fundamental understanding of exposure and process chemistry for enhanced lithography and stability of metal oxide resists (Invited Paper)** [13428-48]
- 13428 1D **Unraveling the reaction mechanisms in a chemically amplified EUV photoresist from a combined theoretical and experimental approach** [13428-49]
- 13428 1F **Effect of composition uniformity in the polymer chain of EUV photoresist on lithographic performance** [13428-51]

TECHNOLOGY OVERVIEW AND NOVEL PATTERNING MATERIALS II

- 13428 1H **Semiconductor technology roadmaps and lithography implications** [13428-53]
- 13428 1J **New insights into high electron affinity photoacid generators and their impact on EUV chemically amplified resist performance** [13428-56]

- 13428 1K **Sequence-defined polypeptoids facilitating stochastics control and EUV patterning study** [13428-57]
- 13428 1L **Polypeptoids as promising EUV photoresists: a study of total electron yield and outgassing under EUV exposure** [13428-107]

RESIST FUNDAMENTALS III

- 13428 1N **Consideration on segregation behavior of the surface localization material and the pattern roughness degradation in EUV lithography** [13428-58]
- 13428 1O **Modeling photoacid diffusion in chemically amplified resists via proximity effect correction in electron beam lithography** [13428-86]
- 13428 1P **Chemical stochastic variability in compact stochastic e-beam mask writing and EUVL models** [13428-60]
- 13428 1R **High precision monitoring of outgassing species in model EUV photoresists with a cavity ring-down spectrometer** [13428-62]

POSTER SESSION

- 13428 1T **Chemistry-informed machine learning model for EUV photoresist development** [13428-64]
- 13428 1U **Boron and metal removal technology from PGMEA and NMP** [13428-65]
- 13428 1V **A point of use filter with new pleats design for lithography applications** [13428-66]
- 13428 1W **Dual-function filtration to improve on-wafer defectivity performance for EUV applications** [13428-68]
- 13428 1X **Non-fluorine photoacid generator performance: physical property and matrix effect impacts** [13428-70]
- 13428 1Y **Development of a new thinner for the next-generation EUV** [13428-71]
- 13428 1Z **Fluorine-free i-line thick film photoresist for advanced semiconductor packaging** [13428-72]
- 13428 20 **Non-ionic photo-acid generators for next-generation EUV photoresists** [13428-73]
- 13428 21 **Development of ancillary photochemical bulk filters to improve particle removal and start up time in automated delivery systems** [13428-74]
- 13428 22 **Commercialization of non-PFAS KrF and development of non-PFAS EUV photoresists** [13428-75]

- 13428 23 **NTD CARs purity developments toward single-print capability in EUV scanners** [13428-76]
- 13428 24 **Latest approaches toward high volume manufacturing with high numerical aperture EUV** [13428-77]
- 13428 25 **Next generation PI filter for advanced lithography process** [13428-79]
- 13428 26 **New development technology for EUV tight pitch patterning** [13428-80]
- 13428 27 **Novel wet cleaning solutions for EUV masks** [13428-81]
- 13428 28 **New photoacid generators designed for advanced EUV patterning** [13428-82]
- 13428 29 **Exploration of UPE membrane technology in point-of-use EUV CAR photoresist filtration** [13428-83]
- 13428 2A **New molecular resist design for advanced patterning** [13428-84]
- 13428 2B **Application of new development technology to ultra-narrow pitch patterns formed by electron beam lithography** [13428-85]
- 13428 2C **Effect of thermal process for biomass EUV/EB resist** [13428-87]
- 13428 2D **Spatially resolved spectroscopy for electron beam patterned metal-organic-based materials** [13428-88]
- 13428 2E **Iodinated underlayer for enhanced chemically amplified resist performance** [13428-89]
- 13428 2F **Innovative optical crosslinking process on PFAS-free underlayers for enhanced sustainability in EUV lithography** [13428-90]
- 13428 2G **BEFORCE: An advanced, versatile platform for unravelling and quantifying EUV photoresist chemistry during exposure, processing, and interaction with the environment** [13428-92]
- 13428 2H **Embedded Barrier Layer (EBL) development for high scan speed ArF immersion application** [13428-95]
- 13428 2I **Development of underlayers for MOR sensitivity improvement** [13428-96]
- 13428 2J **Photolithography process optimization: insights into negative tone resists and spray coating** [13428-97]
- 13428 2K **Extreme ultraviolet induced chemistry in polymer thin films** [13428-98]
- 13428 2L **Mechanistic studies of positive-tone organoantimony resists** [13428-99]

- 13428 2M **Line edge roughness of indium nitrate hydrate resist determined from electron beam lithography line-space patterns** [13428-100]
- 13428 2P **Printability test results of a positive tone organometallic resist by EUV and EB lithography** [13428-104]
- 13428 2Q **Dissolution mechanism of color resist materials** [13428-105]
- 13428 2S **Improving developability for application of iodine-containing materials to EUV lithography** [13428-108]
- 13428 2T **Impact of developer chemistry on EUV photolithography defects: PFAS vs. PFAS-free surfactants** [13428-109]
- 13428 2U **Metal reduction from highly viscous microelectronics fluids** [13428-110]
- 13428 2V **Edge coat applications in 3D memory processes** [13428-111]
