SPIE

Volume 13435

Proceedings of SPIE 0277-786X, V. 13435

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:
Author(s), "Title of Paper," in *Sensors and Smart Structures Technologies for Civil, Mechanical, and Aerospace Systems 2025*, edited by Maria Pina Limongelli, Ching Tai Ng, Didem Ozevin, Proc. of SPIE 13435, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B … 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii *Conference Committee*

FIBER OPTIC SENSORS AND IMPLEMENTATION I

13435 04 **Fringe analysis of flexural beam as Fabry-Perot resonator for ultrasound attenuation characterization (Invited Paper)** [13435-1]

13435 05 **Extracting dispersion curve from frequency response function (FRF) of flexural beams: a Fabry-Perot resonator perspective** [13435-2]

13435 06 **Use of DFOS to monitor crack opening evolution in FRCM-strengthened reinforced concrete structures** [13435-3]

FIBER OPTIC SENSORS AND IMPLEMENTATION II

13435 09 **Applying Fabry-Perot resonator principle for physics-based understanding of bonded piezoelectric wafer active sensor (PWAS)** [13435-7]

13435 0A **Structural health monitoring of complex aerospace structures based on nonintrusive printed piezoelectric** [13435-8]

SENSOR DESIGN AND IMPLEMENTATION

13435 0B **Characterization and control of surface parallel mirror actuators (Invited Paper)** [13435-9]

13435 0C **Development of a reconfigurable infrasonic sensor array board for planetary exploration applications** [13435-10]

13435 0D **Advanced e-tattoo wireless strain sensors for smart structural health monitoring of composite structures** [13435-11]

13435 0E **Thickness gauging using a high-temperature electromagnetic acoustic transducer with optimized magnetic field** [13435-12]

13435 0F **Quantifying uncertainty in InSAR-derived displacement measurements for bridge monitoring** [13435-13]

13435 0G **Design of a variable-thickness morphing wing for enhanced UAV aerodynamic performance** [13435-52]

APPLICATIONS OF SMART SENSORY SYSTEMS TO CIVIL STRUCTURES I

13435 0H **Multitask learning for roof type and material segmentation toward digital twinning (Invited Paper)** [13435-15]

13435 0I **Autonomous conversion of point clouds to digital twins constructed from two-node line elements for simplified structural analysis** [13435-21]

13435 0J **An adaptive optics microscopy system based on a DMD-assisted lateral shearing interferometer** [13435-53]

APPLICATIONS OF SMART SENSORY SYSTEMS TO CIVIL STRUCTURES II

13435 0K **Digital twin technology for bridge structural health monitoring based on agent model (Invited Paper)** [13435-19]

13435 0L **Efficient repair of aging bridges through smartphone-assisted 3D reconstruction** [13435-20]

ADVANCES IN SENSING TECHNOLOGY

13435 0N **Influence of thin film geometry on the behavior of a piezoelectric acoustic emission sensor (Invited Paper)** [13435-23]

13435 0P **Coplanar capacitive sensing for nondestructive evaluation** [13435-25]

13435 0Q **Battery voltage level monitoring and prediction using SAWR-based sensor with machine learning algorithm** [13435-26]

13435 0S **Contact-free detection and visualization of guided waves in composites using an optical microphone** [13435-28]

13435 0T **A flexible sensor-based crack identification method for infrastructure structures** [13435-29]

ADVANCES IN SENSING TECHNOLOGIES FOR COMPOSITES

13435 0U **Low-cost biphasic DC data acquisition for monitoring cementitious self-sensing materials (Invited Paper)** [13435-30]

13435 0V **Strain-based damage detection using nonlinear cointegration theory: application to a masonry building model using smart bricks** [13435-31]

INNOVATIVE SENSOR MATERIALS I

13435 0X **Damage-sensitive electrically conductive mortars: a novel laboratory characterization method and initial numerical simulations (Invited Paper)** [13435-34]

13435 0Y **Embedded sensing system for shipboard damage control scenarios** [13435-35]

13435 0Z **Improving the self-sensing inverse problem displacement field recovery via sensor data fusion** [13435-36]

13435 10 **Investigation of 3D printed concrete for real-time monitoring of additive manufacturing process** [13435-38]

INNOVATIVE MATERIALS AND SENSORS II

13435 12 **Piezoresistive performance of 3D printed cementitious composites doped with carbon microfibers (Invited Paper)** [13435-39]

13435 14 **Transfer leaning using DAS for blasting event identification** [13435-42]

13435 16 **Optimized P(VDF-co-TrFE) annular array transducers for selective excitation of Lamb wave modes** [13435-45]

POSTER SESSION

13435 17 **Flexible temperature sensor using laser induced graphene (LIG) based on processing-controlled seebeck contrast** [13435-46]

13435 18 **Embedded optical sensing systems** [13435-47]

13435 19 **Bridge bearing fixity evaluation using ANN and low-cost wireless sensing systems** [13435-48]

DIGITAL POSTER SESSION

13435 1D **Structural health monitoring of Au Sable Light Station using distributed fiber optic sensing and 3D point clouds** [13435-4]
