Volume 13453

Proceedings of SPIE 0277-786X, V. 13453

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Window and Dome Technologies and Materials XVIII*, edited by W. Howard Poisl, Proc. of SPIE 13453, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v Conference Committee

OPTICAL CHARACTERIZATION TECHNIQUES

- 13453 02 **Honoring Daniel C. Harris' contributions to the window and dome community (Invited Paper)** [13453-1]
- 13453 03 **A generalized wave-propagation-based measurement model for photothermal common-path interferometry (PCI)** [13453-2]
- 13453 04 **Absorption of optical materials measured with photo-thermal common-path interferometry** [13453-3]
- 13453 05 **Absorption measurements of optical window materials at elevated temperatures via photothermal common-path interferometry with laser heating** [13453-4]

OPTICAL MATERIALS FOR WINDOW APPLICATIONS

- 13453 07 **Film with adjustable light conspicuity coating for optical neutralization** [13453-6]

PROCESSING AND PROPERTIES OF OPTICAL MATERIALS

- 13453 0A **Scaling fabrication of random anti-reflective structured surfaces to large windows for high laser power applications** [13453-21]
- 13453 0B **Effect of surface finishing on the continuous wave laser damage threshold of common chalcogenide glass** [13453-10]
- 13453 0C **The optomechanical properties of calcium lanthanum sulfide** [13453-11]
- 13453 0D **Glass formation and properties of multispectral chalcogenide glass and glass ceramics of GeSe₂-Ga₂Se₃-CsCl composition** [13453-13]
- 13453 0E **The effects of sintering pressure and temperature on hot-pressed yttrium oxide** [13453-14]

MATERIALS FOR SENSORS

- 13453 OF **Practical guidelines for specifying germanium and silicon for IR windows and lenses**
[13453-9]
- 13453 OG **Sustainable chalcogenide hybrid inorganic/organic polymers (CHIPs) for short-wave and midwave infrared imaging and sensing** [13453-15]

POSTER SESSION

- 13453 OI **Electrochromic smart windows with visible-light modulation and radiation UV filter**
[13453-18]
