SPIE

**Volume 13458**

Proceedings of SPIE 0277-786X, V. 13458

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Real-Time Image Processing and Deep Learning 2025*, edited by Nasser Kehtarnavaz, Mukul V. Shirvaikar, Proc. of SPIE 13458, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

ISSN: 0277-786X

ISSN: 1996-756X (electronic)

ISBN: 9781510687059

---

**Paper Numbering:** A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

v *Conference Committee*

---

## REAL-TIME DEEP LEARNING APPLICATIONS I

---

- 13458 02 **Learnable 2D Gaussian filters for computationally efficient abdominal organ classification**  
[13458-2]

---

## REAL-TIME DEEP LEARNING APPLICATIONS II

---

- 13458 06 **A batch-mode real-time enhanced-CycleGAN data augmentation approach for detection of IC surface defects** [13458-6]
- 13458 07 **Agri-NET UAV: a drone-captured dataset and model exploration for enhanced plant recognition using low-cost drones** [13458-7]
- 13458 08 **IoT devices with image processing and AI for plastic debris detection** [13458-9]
- 13458 09 **Enhancing object detection with event-based vision sensors and point cloud processing: autonomous systems applications** [13458-10]

---

## REAL-TIME METHODS AND ALGORITHMS I

---

- 13458 0A **Satellite edge AI for automated training data collection, transfer learning, and synthetic training data generation** [13458-11]
- 13458 0B **A comparative study of the AV1, HEVC, and VVC video codecs** [13458-12]
- 13458 0D **Lightweight TransUNet with knowledge distillation for efficient medical image segmentation**  
[13458-14]

---

## REAL-TIME METHODS AND ALGORITHMS II

---

- 13458 0E **Real-time computer vision and deep learning for 3D environment modeling, camera network calibration, and human-robot interaction using a robot dog** [13458-15]
- 13458 0F **Vidpak: high speed lossless scientific video compression** [13458-16]
- 13458 0G **Assessing deep learning techniques for human driving behavior prediction and analysis**  
[13458-17]

---

#### REAL-TIME DEEP LEARNING APPLICATIONS III

---

- 13458 0I **Coaxial drone system for real-time detection, geolocation, and reporting of runway damage on the edge** [13458-22]
- 13458 0J **Efficient stroke lesion segmentation in MRI using a modified deep learning model** [13458-23]

---

#### REAL-TIME METHODS AND ALGORITHMS III

---

- 13458 0M **Guided super-resolution of time-of-flight imaging using multimodal deep learning** [13458-26]
- 13458 0N **Real-time detection and tracking by an array camera with distributed neural processing** [13458-27]

---

#### POSTER SESSION

---

- 13458 0O **Towards the generative model-based synthetization and latent space level analysis of 3D MRA dataset** [13458-29]
- 13458 0Q **Challenges and solutions in automatic detection of Swiss cheese features on Mars using remote sensing techniques** [13458-32]

---

#### ON-DEMAND POSTERS

---

- 13458 0R **Improved deep learning dataset generation and processing for synthetic aperture radar image enhancement** [13458-28]
- 13458 0S **Distributed computing system for preprocessing of multichannel and multirange images** [13458-31]
