SPIE

Volume 13466

Proceedings of SPIE 0277-786X, V. 13466

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Advanced Optics for Imaging Applications: UV through LWIR X*, edited by Jay N. Vizgaitis, Peter L. Marasco, Jasbinder S. Sanghera, Proc. of SPIE 13466, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

MATERIALS AND FABRICATION

- 13466 02 **Feedstocks for chalcogenide glass optics (Invited Paper)** [13466-1]
- 13466 03 **Processing and properties of recycled germanium-based chalcogenide glass: a route to improved reclamation and reuse in advanced technologies** [13466-3]
- 13466 04 **Silicon carbide mirror fabrication at Optimax** [13466-4]
- 13466 05 **Broadband infrared coatings for defense and commercial applications** [13466-6]

METAMATERIALS/METASURFACES I

- 13466 06 **Direct design of a metasurface aberration corrector for a hybrid achromatic triplet using the dispersive Sweatt model** [13466-8]
- 13466 07 **Enhanced phase control in metalenses using overlapping nanohole designs** [13466-9]
- 13466 08 **Gaussian decomposition physical modeling applied to metasurface-refractive hybrid systems** [13466-10]

METAMATERIALS/METASURFACES II

- 13466 09 **Deep inverse modeling the near field response of optical metasurfaces** [13466-11]
- 13466 0A **Key considerations for robust near-field response prediction and optical metasurface inverse design** [13466-13]
- 13466 0B **Wavefront sensing in deep turbulence using metasurface optics and machine learning** [13466-14]
- 13466 0C **Towards autonomous design of metamaterial surfaces via two-photon polymerization printing** [13466-15]

ADVANCED OPTICS FOR SYSTEMS

- 13466 OE **Next-generation Anderson localization waveguides for high-resolution imaging** [13466-17]
- 13466 OF **Advancing freeform gradient index (GRIN) optics for vision correction** [13466-18]
- 13466 OG **Spherical aberration in paraxial calculation of optical cross section** [13466-19]
- 13466 OH **Wideband dispersion control achieved with multi-material gradient index optics** [13466-20]
- 13466 OI **A multi-spectral compact local geometric distortion measurement setup based on a two-axis rotation camera** [13466-21]
- 13466 OJ **The total standard uncertainty of prism coupling refractometry in the midwave and longwave infrared** [13466-22]
