Volume 13535

Proceedings of SPIE 0277-786X, V. 13535

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Research Using Extreme Light Infrastructures: New Frontiers with Petawatt-Level Lasers VI*, edited by Bedrich Rus, Daniele Margarone, Victor Malka, Proc. of SPIE 13535, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

TUESDAY PLENARY SESSION

- 13535 02 **Facility requirements for laser-plasma interaction studies and advanced schemes of direct drive inertial fusion (Plenary Paper)** [13535-600]

ULTRARELATIVISTIC REGIMES OF LASER-MATTER AND LASER-VACUUM INTERACTION

- 13535 03 **Collimated γ -flash emission along the target surface at oblique incidence** [13535-7]

LASER ACCELERATION OF PARTICLES I

- 13535 04 **Effects of laser pointing fluctuations on carbon ion acceleration with the peeler scheme** [13535-12]

LASER ACCELERATION OF PARTICLES II

- 13535 05 **Laser-driven proton acceleration with multi-PW pulses and single- and double-layer targets by 3D PIC simulations** [13535-16]

NUCLEAR PHYSICS WITH ULTRAINTENSE LASERS

- 13535 06 **Nuclear physics under the low-energy, high-intensity frontier (Invited Paper)** [13535-18]
- 13535 07 **Preliminary studies on laser-driven production of nuclear isomeric states for fundamental and applied research at ELI-NP** [13535-19]

ULTRAINTENSE LASER-MATTER INTERACTION AND LASER TECHNOLOGIES

- 13535 08 **Optical probing by Faraday rotation of target-guided laser-driven discharge pulses** [13535-30]
- 13535 09 **The influence of flashlamp water cooling on long-term aberrations in large aperture Nd:glass amplifiers** [13535-31]

POSTER SESSION

- 13535 0A **First measurement of neutrons at the ELIMAIA-ELIMED laser-driven ion beamline** [13535-32]
- 13535 0B **Advanced scintillator stack detectors for real-time analysis of energetic x-rays and proton bunches from laser-driven plasmas** [13535-36]
- 13535 0C **Development of ultralow density double layer targets for laser-plasma interaction** [13535-37]
