Contents

Classification, RPEEE and reporting

Improving transparency in mineral resource classification using multi criteria decision analysis 3
C Barton and J Dalrymple

Application of Quantile Regression Forest for resource classification 19
K Maxwell

Culture, failures/learnings, case studies

Peer accountability and communication through a critical checkpoint framework – driving a culture of critical thinking 35
J M Clark, C Fiddes and M Roux

Rethinking the world's largest gold producing complex through geologic improvements to mineral resource estimates 45
J M Clark, M Samson, C Le Cornu, C Fiddes, M Vandelle, A Williams and M Roux

You're so vein – cognitive bias in the resource estimation process 57
D A Sims

Data science, input data, machine learning and AI

Dare to transform – leveraging new orebody knowledge for next-generation resource estimation 75
J Coombes, P Hodkiewicz and M Mattingley-Scott

Use of machine learning to predict recovery of alumina involving multiple analytical methods at Worsley Alumina 87
J Dangin, P Soodi Shoar, T Wilson, J Harvey and C Cavelius

Building on the shoulders of giants – geostatistics and geodata science 101
G Nwaila and S Zhang

A practical use of machine learning to aid gold recovery studies at Liberty Gold's Black Pine Oxide Gold Project in Southern Idaho 119
V Wilson, C Gomes and A Barrios

Domaining and geological modelling

The importance of geologically driven estimation domaining on resource estimation – an example from the Turquoise Ridge Gold Mine within the Getchell Trend in Nevada 133
C Le Cornu, J M Clark, L Snider and J Pari

Advances in geologic and resource modelling methods for locally-varying controls on orogenic gold mineralisation 147
J A McDivitt, D Greene, E Hart, B Wilson and M Hadavand

Estimation

DIY – implementing customised Python workflows for flexible and effective mineral resource estimation 171
L Bertossi and D Carvalho

Spatial estimation with machine learning of multiple-fluid phase veining in shear-hosted intrusion-related deposits using geospatial features – a case study from Pogo Mine, Alaska 185
E Ramos, S Sen, M Matthews and J Machukera

Estimating recoverable resources – is it still hopeless? 209
O Rondón and W Assibey-Bonsu

Preg-robbing gold ores – an example of a non-linear estimation workflow when dealing with non-additive geometallurgical variables 227
M Samson, G Benthen, J M Clark, C Le Cornu and D Conn

Exploring tailings reprocessing options – from characterisation to preliminary block modelling of the Mount Isa Mines tailings storage facility 243
L Stefoni, A Wilhelmsen and D Ambach

Quantifying, integrating and modelling

Assessment of revenue uncertainty in life-of-mine planning at George Fisher deposit – Queensland, Australia 269
B C Afonseca

Combining geological and grade uncertainties in drill hole spacing studies 289
C Gomes

Onto copper-gold deposit, Indonesia – evaluation of geological and grade uncertainty in a block cave operation 303
R C Hague

Consuming *in situ* uncertainty into mine planning processes – from reserve calculation to dynamic decision-making 319
I Minniakhmetov and J Serjeantson

In situ uncertainty quantification and implications for risk mitigation – a case study from WAIO Newman Hub 333
C Williams and I Minniakhmetov

Novel stratigraphy simulation – a case study for ESG and mine planning application 357
B Wilson, S Sanchez, D Carvalho and S Horan

Author index 373
