

IABSE Congress Ghent 2025

The Essence of Structural Engineering for
Society

Ghent, Belgium
27-29 August 2025

Volume 1 of 4

ISBN: 979-8-3313-2592-3

Message from the President	17
Message from the Organising Committee	18
Organising Committee	19
Message from the Scientific Committee	20
Scientific Committee	21
About IABSE	22
Sponsors	23
Keynote speakers	24
Keynote papers	26
Structures with Meaning: Designing for Society	27
Avoiding Mistakes During Assessment, Design and Construction of Structural Repairs	33
On research, education, codes and practice related to structural integrity	39
Korean Bridge Design: 30 Years of Innovation for a Dynamic Society	47
Safety, reliability, and risk	57
Quantification of hidden safety reserves between different highway traffic load models based on probabilistic calibration analysis	58
Automated Rapid Post-Earthquake Safety Evaluation of Bridges	67
Risk Assessment of an Existing Cable-Stayed Bridge in Akita Compared to Girder Bridge	74
Effects of Bearing Deterioration on the Fatigue Performance of Rib-to-Diaphragm Welded Joints in Steel Box Girder	82
Repurposing of FRP Composite Decommissioned Wind Turbin Blades in a Footbridge Design	91
Assessing the Structural Integrity of Concrete Half-joints Using Sensor Data	99
Statistical Data Analysis of Inspection Outcomes of Post-Tensioned Concrete Bridges in Italy	108
Study on Energy Absorption Capacity of High-Strength Bolt Friction Joints with Slit Holes	116
Huixtla viaduct in Línea K, Mexico	125
Investigation on the effect of corrosion on testing data of reinforced concrete beams	134
A novel assessment of imposed floor loads in contemporary offices	143
Rational design of a four-tower steel continuous cable-stayed bridge in Kobe	151
Review of damage criteria and their validation for bridges: a uniform classification framework	159
Evaluation of load carrying capacity of gusset plates frictionally bonded with high strength bolts	168
The Essence of Integral Safety Engineering for Society	175
A Design Framework for a Safe Society in The Netherlands	184
Reliability-based Assessment of Existing Concrete Structures in ACI CODE-562-25	193
Iconic concrete open Spandrel arch bridges on the South African Wild Coast, highlights structural ingenuity dating back 70 years	201
First application of the Italian Guidelines on risk assessment to some existing bridges: critical analysis and future perspectives	208

Reliability-Based Assessment of Damaged Prestressed Concrete IGirder Bridges	217
Optimizing Fracture Toughness Estimates Using Bayesian Updating with Limited Test Data	226
Structural Rehabilitation of an Historic Masonry Building in Rome (IT)	235
Buckling-Restrained Braces as a sustainable and resilient retrofit strategy	243
Dynamic response of bridge in jacking under blast load	250
Seismic Performance of Steel Buildings in Indian Construction	260
Tancarville Bridge Approach Viaduct Strengthening Project	268
Flexural analysis of UHPC beams: nonlinear constitutive model and parametric study	278
Development and Implementation of a Computational Tool for Fidelity Assessment of a Real-Time Hybrid Simulation (RTHS)	287
Suicide Prevention at Motorway Bridges in Ireland	294
Combined GPS and MEMS Monitoring of Structural Collapse Mechanism Movements	306
Measuring dynamic amplification factors in railway bridges: a field test at Zaltbommel	315
Blast Protection for Critical Infrastructure: Experimental and Numerical Studies	323
Investigations into the tightening behaviour of weathered HV and HR bolting assemblies	332
Insights into the shear resistance of carbon and stainless steel bolts in oversized holes	341
Design Value of a Random Variable Defined as the Minimum of Two Other Statistically Independent Random Variables	349
Calibration of partial safety factors for the assessment of existing bridges	356
Calibration of partial safety factors for structural assessment of existing Italian bridges based on experimental data	357
Traffic models for Italian provincial roads	366
Graphical statics method for evaluating bearing capacity of indeterminate truss bridges	375
Deterioration, monitoring and maintenance	383
Optimization of Renewal Strategy for Railway Track Based on Remaining Useful Life Prediction	384
Advanced Methodology in Cable Inspection and Remediation: Ensuring Longevity and Integrity of External Post-Tensioning Systems	392
Monitoring, assessment and numerical analysis of the masonry bridge pier defects	401
Rehabilitation of Structures in India and Lessons Learnt	409
EDMD-based multi-sensor data fusion for longitudinal girder displacement of suspension bridges	417
Load testing of an arch bridge in order to optimize the FE model	425
Maintenance management of existing bridges: a brief comparison of some Western world strategies	432
A Multidisciplinary Framework for Prioritising Bridge Inspections using Random Forest and Network Analysis	440
Evaluation of Coating Thickness on Faying Surface in High-Strength Bolted Friction Joints Using Ultrasonic Techniques and Machine Learning	447
The non-contact assessment of the bridge expansion joint	456
The benefits to asset owners and engineers of a future-oriented asset-management approach to structural inspections	464
Inspection of bridge post-tensioning using modern non-destructive testing methods	472

Two-dimensional strain measurement and crack detection of reinforced concrete using fiber optic sensors	480
SANTUB – Renovation costs for road bridges and road tunnels through IoT + AI	490
Use of photogrammetry for displacement measurement in bridges	498
UAV-Assisted bridge displacement measurement	506
Application of IoT Acoustic Emission Technology in Monitoring Wire Breaks in Bridge Cables	515
Use of Digital Models in the Preservation of Concrete Bridges: A Case Study	525
A blockchain-based platform for real estate management	534
Advancing Bridge Deck Assessment: The Practical Application of Ground-Penetrating Radar in Structural Monitoring and Maintenance	543
Condition assessment of reinforced and prestressed concrete bridges using visual inspection and 3D modeling	553
In-situ and laboratory collapse testing in a proof loading perspective	563
Validation of proof loading methods: With a basis in collapse testing and stop criteria crack evaluation	572
First steps in predictive maintenance by linking real-time acceleration data onboard of a train to specific theoretical and real damage scenarios	581
The Effects Of Tamping On Railway Track Geometry Recovery	589
Sustainability and circularity	596
Optimizing Bridge Design: Parametric Modelling for Enhancing Efficiency	597
Characterization of Constitutive Response of Natural Fibers Reinforced Concrete under Flexural Loading	606
Innovation and Sustainability in Steel Composite Bridges – Recent Developments	614
ZIN (Brussels) - an example of sustainable transformation applied to high-rise building	623
Determination of Actual Yield and Tensile Strength of Existing Steel Structures by Testing on Small Specimens	632
Effects of Deicing Salt on Weathering Steel Bridge Details – Supported by FEM Calculations	642
The Lucie-Bréard Footbridge in Saint-Denis, France: Opportunities and Challenges of Bridge Reuse	651
The Use of High-Strength, High-Performance Concrete Deck Slabs Without Paving and Waterproofing for Low-Traffic Road Bridges	660
Reuse of 50 years old existing prestressed girders	668
From Equestrian Center to Recypark - Circularity Through Reused Glulam Structure	676
Stockholm Metro expansion: a Sustainable Urban Development in Structural Engineering	683
Recycled Materials in Road and Bridge Construction: Current Applications, Challenges and Innovations	692
Circular performance of small road bridges	702
How the sustainability of the built environment can be enhanced by high-tech structural inspection methods	710
Material choices and cost optimisation for 3,000m+ span bridges	719
Monitoring carbon based structural design for building Paris Proof	728

Proposal and experimental study of the Hybrid Post-Tensioned Timber Beams System (HPTTB)	736
SBE's Sustainable Bridge Tool: parametric analysis as a basis for sustainable trade-offs	743
Environmental Implications of Reusing Steel Bridges: A Case Study on the Keizersveerbrug	751
Hybrid I-Girder for Steel Bridges Stiffened with Timber Materials	759
Investigation of precast concrete and composite bridge girders for sustainability	766
Sustainable and economical bridge design through collaboration	775
All types of bridges	779
Crack formation and strengthening evaluation of concrete box girder bridges based on complete stress index system	780
Experiments on skewed reinforced concrete slabs failing in shear	789
Sustainable and economical spacing of steel girders in I girder bridges determined by parametric studies	797
Hybrid Steel Girders for Medium-Span Composite Highway Bridges	805
Design and Construction of An Open-deck PPC Langer Bridge Suitable for Regions of Heavy Snowfall	814
The new footbridge in Arquennes – One of the lightest deck per m ²	822
Conceptual Design Decisions for Optimised Network Tied-Arch Bridges	830
Numerical analysis of direct-shear behavior of HPC dry joints with different plastic damage parameters in precast concrete segmental bridges	839
Numerical and parametric investigation for shear performance of circular hollow RC column	848
Evolution of Precast Pier Cap in Elevated Structure: Case Study Ranchi Corridor, India	856
Structural rehabilitation of bridges using BIM techniques. A case Study	864
Comparative Analysis of Pedestrian Bridge Alternatives Using Steel, Ordinary Portland Concrete, and Geopolymer Concrete for Structural, Environmental, and Economic Performance	873
Urumea River Bridge at Epele	883
Analysis of Train-Bridge Coupled Vibration of Cable-Stayed Suspension Hybrid Bridge under Combined Wind and Wave Action	891
Considering the Soil-structure Interaction in the Seismic Analysis of Integral Abutment Bridges	898
Passerelle Cents-Neudorf-Weimershof (CNW) – Wind-tunnel tests assisted design	905
Ferreirinha Bridge – Aerodynamic Optimization and Verification	911
Bridge connecting buildings A and C set of the headquarters of the TRF1 Brasília DF	920
Parametric Analysis of Vertical and Lateral Stiffnesses of Long-span Road-rail Suspension Bridge	928
Analysis of Load-Bearing Characteristics, Collapse Behaviors, and Critical Conditions from a Maintenance Perspective of Modular Temporary Bridges	937
Erection by turning steel box girders of the crossing of motorway E42 and the 'Canal du Centre'	945
First flax fiber reinforced bio-based unsaturated polyester resin bridge for vehicles, Ulm Germany	951

Statistical analysis of the load-bearing capacity of reinforced concrete half-joints tested in laboratory conditions	960
Strengthening and retrofitting	966
Replacement or upgrading - experiences from the perspective of a German road bridge engineer	967
Restoration, retrofitting and strengthening of 21 bridges in the Vesdre basin following the terrible floods of July 2021 (BE)	975
Alternative use of an RC portal frame bridge built in 1941	982
Rehabilitation of the historical Boca del Cerro arch bridge	990
Design for the reinstatement of Barmouth Viaduct Metallic Spans	999
Study on Reinforcement Method of Upper Flange of Steel Girders Using CFRP Moulded plates	1009
Fatigue assessment and retrofitting of Vilvoorde viaduct in Belgium	1017
Strengthening of frame corners by post-installed concrete screws	1026
Pull-Out Testing of Titanium Alloy Bars in Near-Surface Mounted Retrofitting of Concrete Structures	1034
Case Study on the Design of Retrofit Strategies for Corroded Marine Bridge Pile Caps	1041
Experimental study on the ultimate strength and the mechanism of stress transfer of column members reinforced by using cover plates	1049
Study on the Cross-Sectional Shape of the Web Bypass Member for the Splice Plate	
Replacement of the Lower Flange Connection of Steel I-Girders	1056
Application of gap filling material MM1018 in connections with injection bolts for maintenance of bridge structures	1063
Study on repair methods for fatigue crack on intersection weld of Ushape closed rib and transverse rib in orthotropic steel deck	1071
SMA-based rocking dual-core braced-frame system for seismic retrofit of RC buildings	1081
Seismic resilient self-centering braces for orthogonal steel exoskeleton structures	1090
Adapting slender footbridges to the current requirements of bicycle traffic	1099
Behavior of a post-installed shear strengthening solution for RC elements under fatigue actions and higher temperatures	1107
Mesh Anchorage in Textile Reinforced Mortar – Development of a Structural Design Model	1116
Seismic assessment and strengthening of Dutch heritage churches with masonry vaults	1126
Probabilistic Analysis of Thermal Stresses in Architectural Marble Elements for Effective Strengthening	1135
Structural analysis and optimisation	1144
Deminishing classic steel arch bridges' horizontal bracings	1145
A new spring element for steel joints based on the components method	1152
Standardization of steel suspended gates with lateral movement for 4 new locks in the Walloon Region (Belgium, Canal du Centre and Canal Charleroi-Bruxelles)	1160
Streamlining Workflows in construction with Parametric Design	1168
Design of thin plated steel cross-sections: FEM vs. Reduced stress method	1176
Aero-structural design of bridges emulating shape- and frequencydependent flutter	

derivatives	1184
The use of complex FE-models to assess bolted connections of existing structures	1192
New Insights into Splitting Crack Behaviour in Concrete Beams with Pre-tensioned CFRP Strands using Distributed Fibre Optic Sensors	1199
For More Collaborative and Open-Source Structural Engineering	1207
Research on optimization method of reasonable arch axis of arch bridge based on Fourier series expansion	1215
Stability analysis of support for double-layer cast-in-situ girder in bare rock area	1223
Design and Optimization of Cast Steel Brackets to Connect Supplemental Viscous Damping and Special Moment Resisting Frames	1230
Structural Stability Analysis of Lunar Lava Tubes for Habitat Location on the Moon	1238
Lattice Modelling of a Substandard RC Frame Considering Localization Issues	1247
BowstringPRO – A new design tool for Tied-Arch Bridges	1255
Numerical analysis of stiffened curved panels under compressive load distributions	1263
Assessing the structural impact of existing cracks in a historical Vierendeel bridge using advanced modelling techniques	1272
Design of floating pedestrian bridge at Terhills, Belgium	1278
Numerical analysis of construction disturbance of dual-line shield tunnel parallel to an existing buried tunnel	1287
The optimal design of double-row capsule grouting to protect tunnel adjacent to excavation	1293
Buckling behavior of stiffened plate with flexural and torsional deformation for steel bridge towers	1299
Large span and light-weight structures	1307
Development of the roof structure for the new Everton F.C. Stadium	1308
Leirfjord suspension bridge, investigations of an unconventional suspension bridge solution	1317
Structural Behavior of Interlocking Façade Sandwich Panels as Substructure	1324
Investigating Blister Formation in PIR-Core Sandwich Panels	1333
The Sabiñánigo viaduct on the A-23 highway. Conception, design and construction	1342
Effects of the Location of a Bridge on its Wind Loading	1351
Zemplen 723 – the New World Record Pedestrian Catenary Bridge in Sátoraljaújhely, Hungary	1359
Impact of geometrical details on flutter stability of twin-box bridge decks	1368
Design Equation for the Distortional Buckling Load of Cold-Formed Steel Members Using Orthotropic Plate Theory	1377
Dynamic Behaviors and Loading of Steel Tied-arch Bridges due to Moving Vehicles	1386
Cable Replacement and Reprofiling of the Talmadge Memorial Bridge to Accommodate Taller Ships	1395
An Attention-Based LSTM Neural Network for Condition Prediction of Large-Span Cantilever Casting PC Continuous Box-Girder Bridges under Construction	1403
The Halsafjord crossing, an asymmetric two-span suspension bridge with deep-water gravity-based foundation	1411

Innovative and unique techniques used in tower construction of New Sotra Bridge	1418
Long-term extreme response of a long-span bridge accounting for parametric effects of wind turbulence: part I – methodology	1425
Long-term extreme response of a long-span bridge accounting for parametric effects of wind turbulence: part II – analyses and results	1432
Innovative suspension footbridge design in Spain: national record in span and height with tower-free geometry	1439
Research on Construction Technology of "Delayed Tensioning of Stay Cables"	1447
Structural health monitoring	1455
Operational stress estimation from limited output -only vibration measurement by using Kalman Filter	1456
Stop criteria for proof load testing using a traffic light system	1464
Continuous Bridge Monitoring at the scale of a whole country: the example of Greece	1472
Structural Health Monitoring of a 250m span extrados bridge, Rose Fitzgerald Bridge over the river Barrow	1481
Damage detection of civil structures through machine learning approaches	1490
Bridge structural assessment and health monitoring: the case study of the iconic Corso Regina Margherita Bridge in Turin, Italy	1499
A cost-effective approach for PZT-enable structural health monitoring of RC infrastructures	1508
Non-Structural Components in Isolated Medical Facilities During Seismic Demands	1516
Feasibility Study on Structural Health Monitoring for Cantilevered Highway Sign	1523
Seismic Performance of a Hybrid Semiactive and Passive Control System for a Low-Rise Structure Using Real-Time Hybrid Simulation	1531
Use of GPS monitoring to benchmark theoretical wind response calculations for Forth Road Bridge	1540
Monitoring the Concrete Slab Bridge on Balladelaan in the Netherlands using Embedded Ultrasonic Sensors	1549
Continuous Monitoring of Bridge Deflection Under Traffic Load	1558
Experimental Study of Cable Tension Force Identification Method Based on Effective Vibration Length	1567
Innovative structures	1575
Generic footbridges in Eupen	1576
Feasibility study of UHPC-NC composite structure in large cantilever system	1583
Study on Shear Behavior of MCL-shaped Composite Dowel Connectors of Steel-Concrete Composite Structure	1591
Conceptualisation of semi-precast elements for bridge construction using semi-embedded composite dowels	1601
Parametric sensitivity analysis on bending resistance of built-up coldformed steel-concrete composite system	1609
Temporal Evolution of Surface Roughness in Concrete: A Comparative Study of Base Mix and Admixture-Enhanced Mix	1618
Submerged Floating Tubes for Road Traffic - Will it Be Now?	1626

A novel multi-layer jamming (MLJ)-reinforced Tensairity beam for rapid construction in extreme environments	1634
Pioneering Spherical Concrete Sliding Hinges for the isostatic Double Decked Cut & Cover Tunnel of the Oosterweel Link	1641
Design and Construction of an Irregular Hyperboloid Observation Tower Supported by a Cable Net Structure	1651
Design, construction and analysis of a concrete shell using clay formwork, augmented reality and sprayed concrete	1659
Design of a challenging two span stress ribbon bridge over the Coruña Bay (Spain) and study of pedestrian comfort	1668
The Curved Cable-Stayed Footbridge of Santullano: A Novel Blend of Aesthetic and Structural Efficiency	1676
A Study in Spatial Curved Arch Design: The East Bridge over the Jiang Xi River	1684
Bolintxu viaducts: slender arch bridges crossing over an environmentally sensitive valley	1692
Fatigue and fracture	1700
Evaluation on Fatigue Performance of Offshore Steel Structures Considering Corrosion and Residual Stresses	1701
Automated Workflow of Local Fatigue Analysis on Steel Orthotropic Bridge Deck	1710
Constructional Details with Thermal Cut Edges in Steel Structures - Influence of the Surface Quality on the Fatigue Strength	1719
Application of the Potential Drop Method in Brittle Fracture Tests	1732
Fatigue resistance of hot-riveted double covered joints with complex lay-out	1741
Influence of Various Cutting Methods on the Fatigue Strength of Slip-Resistant Connections in Steel Structures	1750
Fatigue resistance of riveted steel bridge	1759
A variable amplitude database compilation of steel welded joints to compare various rulesets	1766
Derivation of partial factor for fatigue of rebars in concrete railway bridges	1776
Fatigue of Reinforced Concrete Railway Trough Bridges in Northern Sweden - Structural Safety and Reliability	1785
Fatigue degradation in concrete: A Review	1794
Design for earthquakes	1803
Design and Manufacturing Recommendations for Multi-Pendulum Bearings	1804
Key Lessons from Observed Earthquake Performance of Seismically Isolated Structures	1813
Low cycle fatigue performance of welded steel pier corner joint subjected to out-of-plane bending moment	1822
Seismic Isolator Qualification Testing Ensuring Long-Term Reliability	1831
Assessment and execution of the replacement of seismic isolators in the Tlapa Hospital, Mexico	1840
Reduction of the seismic response of bridges. Different behaviour factors in the longitudinal and transverse direction	1848
Seismic Design Review of Drilled Shafts with Isolation Casings	1857
Directional Variability of Ground Motion Components: Toward an Integrated approach	

for Seismic Hazard Assessment	1865
Analysis of the seismic response of a sandy soil by means of seismic table tests using a shear box	1874
Effects of climate change on infrastructures	1883
Framework for the seismic vulnerability assessment of reinforced concrete structures considering climate change effects	1884
Resilience of infrastructure in the climate change area	1894
Modelling Climate Change Effects on Bridges in Portugal: A Framework for Temperature and Strain Analysis	1903
A new prototype of Fibre Optic Sensor (FOSS) to monitor bridge scour	1912
The impact of demountable connections on effective use of materials in timber structures	1918
Review on experimental and numerical approaches to the combined effect of carbonation and chloride ingress in reinforced concrete	1927
Reliability-Based Design Criteria for Structures and Civil Infrastructure Subjected to Extreme Events in a Changing Climate	1936
Reconstruction plan for transport infrastructure in the flood-affected area (2024) in the Kłodzko Valley	1944
Modeling dynamical behaviors of bridge piers under scour: Comparative analyses of Winkler and simple discrete spring models	1952
Forensic Non-Linear Modelling of Torrent-Barriers against Natural Hazards	1962
All structural materials	1973
Research on Salt Freeze Thaw of Concrete Based on Multi Field Coupling Model	1974
On the influence of loading history on long-term behavior of concrete elements	1982
Seismic Performance of Conventional and Additively Manufactured UShaped Flexural Plates	1991
CE compliant modular bridge joints	1997
Numerical simulation on eccentric compression behavior of UHPFRC columns	2005
A cross-scale design approach for sustainable geopolymer concrete materials	2013
Nanoscale research on interfacial shear behavior between concretes cast at different times	2021
Projects, costs and pathologies of galvanized steel road bridges in Chile	2029
Case studies	2036
Structural Behaviour and FE Analysis of Zemplen 723, a Long Span Pedestrian Catenary Bridge	2037
Preload measurements of bolted connections in Ramspol storm surge barrier	2046
Fenix: Shaping a Tornado Structure in a Structured, Integral Approach	2054
Fenix Tornado: dynamic behaviour	2063
Sustainable Structural Design for Frankfurt Airport Terminal 3	2069
The Gordie Howe International Bridge – Superstructure construction engineering: design and control	2078
Sensitivity Analyses on a Monumental Building considering Soil- Structure Interaction	2087
Dynamics of structures	2096

Optimization-based design of tuned mass dampers for pedestrian bridges with multiple significant vibration modes	2097
A robust design of tuned mass dampers on the existing Lembeek viaduct as a part of the high-speed line L96N	2105
Comparison between full-scale measurements and numerical simulations of a long-span bridge during a non-synoptic event	2111
Research on the Seismic Performance of Belfry Using Vibration Tests and Analysis with a Vibration Exciter	2120
Structural vibro-acoustic coupling analysis of U-shaped girder based on PINN	2128
A Fast Computational Framework for Wind-Traffic-Bridge Dynamic Coupling Based on Neural Operators	2136
Parametric Study on a Floating Vertiport Anchored with Taut Mooring Lines	2145
Time-Domain Aerodynamic Analysis for Floating Bridges	2152
Traffic data for research, design, and assessment of bridges	2158
Traffic load model for the inner city of Amsterdam	2159
Using strain gauge measurements to predict load effects from traffic	2167
Modifications to FLM4 for one-way traffic based on WIMmeasurements	2176
Methodological framework for assessing the reliability indices of composite bridge superstructures considering the degradation of shear connectors: aspects of technical implementation	2185
Potentials of utilizing vehicle weight data for the calibration of national traffic load models for bridges	2193
Route specific fatigue load models for railway bridges based on WIMData– Derivation and example application	2201
Caballar Viaduct strengthening	2209
Refined Vehicle Classification for BWIM Traffic Data and the Effects on Traffic Load Modelling	2219
Assessment of the historical infrastructure in Amsterdam	2228
A multi-level structural assessment for historical composite bridge decks	2229
Experimental prediction of the remaining strength of timber foundations in Amsterdam with micro-drilling	2238
A reduced traffic load model for the inner city of Amsterdam	2247
Developing Eurocode Annexes for Assessment of Historical Bridges	2256
Advanced finite element modelling and material characterisation procedures in support to the structural assessment of urban masonry quay walls: the Amsterdam case study	2265
From reactive to proactive quay wall risk management	2274
Towards the practical application of the ‘proven-strength’ concept to historic quay walls in Amsterdam	2282
Serviceability of structures	2290
Evaluation of Flexural Strength of Concrete Filled Double-Layer Steel Tubular Column Considering Confinement Effect of Steel Tubes	2291
Condition assessment of a steel riveted road and railway bridge in Bulgaria	2299
Longitudinal cracking of the lower flange of precambered composite steel and concrete	

bridge girders	2306
Restrained shrinkage effect in reinforced UHPC elements	2314
Fault identification of bridge expansion joints based on vibration and acoustic signals	2320
Serviceability Performance of Port Lands Bridges under Vehicle- Induced Vibrations	2326
Ship collision with bridges	2335
Ship collisions: Types of aberrancy, collision models and calibration challenges	2336
AASHTO Vessel Collision Analysis & Pier Protection Alternatives	2345
Advances in bridge design for barge impacts	2354
Quantitative Risk Analysis of New Sea Sluice IJmuiden Estimation of Collision Probability	2363
Ship Impact on Bridges – In Design, Construction and Operation	2370
Codification of Ship Collision	2379
Architecture and high-rise	2387
Structural design of Vietnam Military History Museum	2388
Improving user comfort in metro stations through a structural dome	2396
Structural design and analysis of Triangle	2405
Structural Design of the Super-Tall building “Tour F” (>400 m) Abidjan – Ivory Coast	2414
Comparing the Life Cycle Assessments of a high-rise Building: Concrete vs. Concrete-Timber Hybrid Construction	2423
HALO: a new circular footbridge and elevator connection in Vigo, Spain	2433
Exceptional loading conditions and climate change	2440
Transport of heavy loads over M50 Westlink Bridge	2441
Evaluation of Low-Carbon technologies for Steel Bridges and Carbon emissions in the use Stage	2450
Stainless steel circular tubular stub columns infilled with seawater sea-sand concrete: Experiments and design	2458
Burning Bridges: Development of an integrated methodology to assess the thermal and structural (GMNIA) response of a bridge under fire loading using CFD and LS-DYNA	2467
Effect of exceptional road transports on bridges in Italy: review and application	2476
Thermo-mechanical Analysis on Bridge Suspender under Jet Fire Induced by Hydrogen Leakage	2484
Additive manufacturing	2491
Characterizing unrestrained drying shrinkage of 3-dimensional printed concrete	2492
3D printed concrete - applications for the industry: latest feedback from France	2500
3D Concrete Printing and Infill Patterns of Energy Efficient Structural Wall Elements	2510
3D Concrete Printing of Thin-Walled Load-Bearing Reinforced Structures	2518
Structural Steel and Advanced Manufacturing: a Collision Course in Need of a Vocabulary	2527
Modifications and bypass Viaduct Merksem	2535
Assessment of a statically indetermined existing box girder bridge subjected to settlements	2536
Viaduct of Merksem – Original construction and needs for adaption	2545
Parametric assessment of substructure subjected to settlements	2552
Viaduct Merksem - Elimination of transverse prestressing	2559

Preserving load bearing capacity of an existing foundation by retrofitting jet grout columns	2567
Viaduct of Merksem: Assessment of an existing steel-concrete bridge subjected to settlements	2576
Stay cable replacement in Galecopper Bridge	2585
Galecopper Bridge cable replacement: Environmental and mobility management and Collaborative Coordination in Bridge Maintenance	2586
Galecopper Bridge cable replacement: Resistance of corroded locked coil cables	2594
Galecopper Bridge cable replacement: Cable replacement methods, testing, sequencing and new cable system insights	2603
Galecopper Bridge cable replacement – managing structural safety	2612
Galecopper Bridge cable replacement: Enabling steelwork – challenges of installing steelwork within an existing structure	2621
Galecopper Bridge cable replacement – development of the cable replacement solution	2629
Galecopper Bridge cable replacement: Detailed analysis of the demand on the structure	2637
Forensic engineering and lessons learned	2644
Assessment of Corbel Damages in Concrete Parking Structures	2645
How to Avoid Damages and Collapse of Load-limited Bridges under Overloaded Trucks	2654
Forensic Engineering Case Studies: An Indispensable Source of Experience and Knowledge	2660
The University Bridge in Bydgoszcz: Technical Aspects of the Closure and the Decision to Reinforce the Bridge – Structural Calculations and Testing	2668
Forensic analysis of a RC building collapsed during the 1998 Sarno Landslides	2676
Learnings from the Collapse of the F.I.U. Pedestrian Bridge in Miami FL, 2018	2685
High Speed railway structures as part of the HS2	2694
High Speed 2 London Tunnels: Victoria Road Crossover Box and Shafts	2695
HS2 Delta - Precast Segmental Viaducts erected with temporary stay cables	2704
Composite viaducts for HS2 line between London and Birmingham	2713
HS2's Curzon Street No. 2 Viaduct	2720
High Speed 2 - Curzon 3 Viaduct	2729
Curzon Street Station Approach. Composite Viaducts: Lawley Middleway and Duddeston Junction Viaducts. Design for launching construction methodology	2739
Soil-structure Interaction	2748
Soil-Wind-structure interaction for Super-Tall buildings Tour F - Abidjan – Ivory Coast	2749
Effects of the Geotechnical Properties of Soil Type on the Structural Design of Isolated Footings	2758
Research on load resistance of gravity anchored foundation with nonslip steps	2768
Periodic FE-BE Model for the Vertical Dynamic Impedance of Pile Groups Embedded in Unsaturated Soils	2776
Data-informed life-cycle management of existing concrete structures	2782
Data-Driven Approaches for Optimizing Concrete Bridge Maintenance in Compliance with Italian Bridge Management Guidelines	2783
Towards an OpenBIM-based Digital Twin for Infrastructure Maintenance: a Concrete	

Bridge Use Case	2791
Structural health monitoring of new bridges by distributed fiber optic sensors embedded in concrete	2803
Time-dependent prediction of the bending moment capacity of a corroding prestressed concrete bridge girder subjected to chloride ingress	2811
Standardized digital management of existing bridge using OpenBIM for enhanced condition assessment	2818
