**Volume 13591**

Proceedings of SPIE 0277-786X, V. 13591

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Organic and Hybrid Transistors XXIV*, edited by Iain McCulloch, Oana D. Jurchescu, Proc. of SPIE 13591, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

ISSN: 0277-786X

ISSN: 1996-756X (electronic)

ISBN: 9781510690905

ISBN: 9781510690912 (electronic)

---

**Paper Numbering:** A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

v *Conference Committee*

---

## **MATERIAL AND DEVICE DESIGN**

---

13591 03 **Non-conjugated polymers for improved organic thin film transistors (Invited Paper)**  
[13591-2]

---

## **HYBRID FETS**

---

13591 07 **Investigating the relationship between polymer growth and homocoupling defects using high-resolution STM imaging** [13591-6]

---

## **POSTER SESSION**

---

13591 0L **Self-assembled nanofiber-based organic electrochemical transistor channel materials for high-efficiency biosignal measurement** [13591-22]
