Volume 13616

Proceedings of SPIE 0277-786X, V. 13616

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:
Author(s), "Title of Paper," in *Remote Sensing and Modeling of Ecosystems for Sustainability XVI*, edited by Wei Gao, Jinnian Wang, Proc. of SPIE 13616, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

ISSN: 0277-786X
ISSN: 1996-756X (electronic)

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B … 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

REMOTE SENSING FOR ECOSYSTEM MONITORING AND ASSESSMENT I

13616 02 **Estimating UV actinic fluxes from shadowband irradiance networks (Invited Paper)** [13616-1]

13616 03 **Modeling landscape variability in grasslands productivity with DayCent and remote-sensing imagery across a precipitation gradient** [13616-4]

REMOTE SENSING FOR ECOSYSTEM MONITORING AND ASSESSMENT II

13616 04 **Assessing urban biodiversity using remote sensing** [13616-5]

13616 05 **Global land cover dynamics and their drives observed at 30m resolution over 1985-2022** [13616-6]

ADVANCED TECHNIQUES AND MODELING FOR ECOSYSTEM UNDERSTANDING AND SUSTAINABILITY I

13616 06 **Understanding and addressing the climate and natural capital nexus (Invited Paper)** [13616-12]

13616 07 **Modeling soil microbial biogeochemistry for ecosystem sustainability** [13616-14]

13616 08 **DDPM-based feature learner enables label-efficient transfer in land cover classification** [13616-15]

13616 09 **Development of QGIS plugin (KARI-SDM) for time series species distribution modeling using high-resolution satellite images** [13616-16]

ADVANCED TECHNIQUES AND MODELING FOR ECOSYSTEM UNDERSTANDING AND SUSTAINABILITY II

13616 0A **Recent advancements in the DayCent model** [13616-17]

POSTER SESSION

13616 0B **Detection of moving part malfunctions in paired ground radiometers using deep learning** [13616-24]

13616 0C **Early identification of rice growing areas based on Sentinel-1 SAR time series data** [13616-25]

13616 0D **Analysis of spatial and temporal variability of soil salinity in the Yellow River delta** [13616-31]
