Volume 13783

Proceedings of SPIE 0277-786X, V. 13783

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *2025 AI Photonics Technology Symposium*, edited by Xiang Zhang, Proc. of SPIE 13783, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

2025 AI PHOTONICS TECHNOLOGY SYMPOSIUM

- 13783 02 **Research on a carrier suppression analog optical transmission method based on directly modulated lasers** [13783-1]
- 13783 03 **A study of Raman spectral reconstruction based on median filtering and weighted Wiener estimation** [13783-3]
- 13783 04 **A study of Fourier denoising and wavelet denoising in the reconstruction of cellular and serum Raman spectra** [13783-4]
- 13783 05 **End-to-end single-lens imaging system design via differentiable ray tracing** [13783-5]
- 13783 06 **Spatially variable convolutional compression color constancy network with multiple bias corrections** [13783-7]
- 13783 07 **2D direction finding method based on L-shaped array and microwave photonics correlation interferometer** [13783-8]
- 13783 08 **Three-dimensional fluorescence and intensity diffraction tomography dual-modality imaging based on adaptive optics** [13783-9]
- 13783 09 **High-speed intensity diffraction tomography based on spatiotemporal smoothness prior** [13783-10]
- 13783 0A **High-speed extended depth-of-field microscopy for whole slide digital pathology** [13783-11]
- 13783 0B **Adaptive blind deconvolution for fluorescence microscopy via sparse prior** [13783-12]
- 13783 0C **Enabling polarization-dependent topological state switching of perfect vortex beams with a holographic device** [13783-13]
- 13783 0D **Dielectric metasurface for single-mode fiber edge coupling** [13783-14]
- 13783 0E **A fast freeform surface design method based on feature mapping** [13783-15]
- 13783 0F **Efficient numerical calculation method for eigenmodes of diluted waveguide** [13783-19]

- 13783 0G **On-chip partial differential equation solving based on physics-informed neural networks**
[13783-20]
- 13783 0H **Study of nonvolatile directional coupler switches on silicon photonics platform** [13783-21]
- 13783 0I **Lightweight intelligent modulation format recognition algorithm based on frequency-domain optoelectronic computing chip** [13783-24]
- 13783 0J **Silicon-based dual-channel optical switches based on GSST phase change materials**
[13783-25]
- 13783 0K **SwinT-SpecNet: hyperspectral image super-resolution reconstruction via dual-branch collaboration and three-stage dynamic fusion** [13783-26]
- 13783 0L **Low-light image enhancement based on the combination of adaptive variational model and alternating least square method** [13783-27]
