Volume 13963

Proceedings of SPIE 0277-786X, V. 13963

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *AOPC 2025: Computational Imaging Technology*, edited by Ping Su, Proc. of SPIE 13963, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

COMPUTATIONAL IMAGING TECHNOLOGY

- 13963 02 **Research on NLOS imaging reconstruction method using diffusion model guided by speckle images** [13963-1]
- 13963 03 **Research on safety early-warning technology for trackless rubber-tyred vehicles in coal mines** [13963-2]
- 13963 04 **Optimization of unequal interval phase encoding in phase-modulated holographic storage using genetic algorithm** [13963-4]
- 13963 05 **Feature enhancement method for space targets based on polarization imaging and color-difference optimization** [13963-7]
- 13963 06 **Under-sampled single-photon non-line-of-sight imaging reconstruction based on spatio-temporal correlation** [13963-8]
- 13963 07 **Classification of chondrosarcoma based on laser-induced breakdown spectroscopy with machine learning** [13963-9]
- 13963 08 **Generalized temporal phase unwrapping through physics-constrained digital twin neural networks** [13963-12]
- 13963 09 **Research on GM-APD lidar simulation model for complex scene detection** [13963-14]
- 13963 0A **Regularization restoration method based on prior information of wavefront coding** [13963-15]
- 13963 0B **The development and application of coded imaging technology** [13963-16]
- 13963 0C **Bayesian inference 3D reconstruction from single-photon lidar** [13963-17]
- 13963 0D **Geometric constraint framework with motion tracking for fast 3D reconstruction of dynamic objects** [13963-19]
- 13963 0E **An intelligent conversion method for dual-channel images of digital holography and optical microscopy** [13963-20]

- 13963 OG **Hyperspectral single-pixel imaging using untrained neural network** [13963-22]
- 13963 OH **Physics-informed ultra-low photon level single-pixel imaging** [13963-23]
- 13963 OI **Beam collimation and quality enhancement of edge-emitting semiconductor lasers using a single-chip metasurface** [13963-24]
