

# **IAF Space Propulsion Symposium**

Held at the 76th International Astronautical Congress  
(IAC 2025)

Sydney, Australia  
29 September - 3 October 2025

Volume 1 of 2

ISBN: 979-8-3313-2938-9

# TABLE OF CONTENTS

## VOLUME 1

### **C4.1 LIQUID PROPULSION (1)**

|                                                                                                                                                                                                                                                     |    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| Development Strategy and Early Test Results of a 250 N Green Propellant Thruster.....                                                                                                                                                               | 1  |
| <i>Duran Martin, Natalia Ghisi, Hadeel Alnahdi, Shaima Albedwawi, Caique Presoto, Fatema Alawadhi, Vito Salvatore, Carmine Carmicino, Henrique Argentieri</i>                                                                                       |    |
| Development Status of a 420 N Liquid Bipropellant Engine Using 98% HTP and TMPDA.....                                                                                                                                                               | 14 |
| <i>Pawel Surmacz, Michal Ranachowski, Kamil Sobczak, Zbigniew Gut, Adrian Parzybut, Adam Okninski, Bartosz Bartkowiak, Ferran Valencia Bel</i>                                                                                                      |    |
| Designing for Reuse: Technical Challenges and Performance Trade-Offs for Reusable Liquid Propellant Rocket Engines .....                                                                                                                            | 22 |
| <i>Lilly Etzenbach, Mennatallah Hussein, Olivier De Weck</i>                                                                                                                                                                                        |    |
| The Emirates Mission to the Asteroid Belt: Chemical Propulsion System Architecture and Usage in EMA.....                                                                                                                                            | 38 |
| <i>Mohammed Alameri, Suzan Green, Nourah Alyammahi</i>                                                                                                                                                                                              |    |
| Tank Head Start Approach for a 80 ton-Class Gas-Generator Cycle Methane/LOX Rocket Engine .....                                                                                                                                                     | 44 |
| <i>Hua Wei, Yu Guan, Fu Song, Xiuyu Yi, Xin Ge, Hang Chen, Hanmo Shen, Gege Bai</i>                                                                                                                                                                 |    |
| Integrated Development of an Expander Cycle Liquid Rocket Engine and Upper Stage Propulsion System .....                                                                                                                                            | 51 |
| <i>Cheulwoong Kim, Byoungjik Lim, Seokhee Lim, Moo Keun Yi, Woongrae Roh</i>                                                                                                                                                                        |    |
| H3 Launch Vehicle Launch Result and LE-9 Type2 Engine Development Status .....                                                                                                                                                                      | 58 |
| <i>Shogo Ozaki, Akihide Kurosu, Teiu Kobayashi</i>                                                                                                                                                                                                  |    |
| Recent Improvements in the LUMEN Test Bed for Oxygen-Methane Rocket Engine Technologies .....                                                                                                                                                       | 65 |
| <i>Justin Hardi, Tobias Traudt, Michael Börner, Dmitry Suslov, Wolfgang Armbruster, Alexander Bee, Robson Hahn, Kai Dresia, Eldin Kurudzija, Christopher Groll, Max Axel Müller, Sebastian Klein, Jan Haemisch, Jan Deeken, Stefan Schlechtriem</i> |    |

### **C4.2 LIQUID PROPULSION (2)**

|                                                                                                                                   |    |
|-----------------------------------------------------------------------------------------------------------------------------------|----|
| Development and Test Results of an Additively Printed 250N Class Monopropellant Thruster .....                                    | 73 |
| <i>Ulrich Gotzig</i>                                                                                                              |    |
| Effect of Surface Roughness on Cooling Channel Fouling in Methane Fueled Rocket Engines .....                                     | 80 |
| <i>Jules Heldens, Taras Koturbash, Jens Fridh, Jan Östlund</i>                                                                    |    |
| Influence of Fuel Properties on the Ignition Behavior of NaBH <sub>4</sub> -Promoted Hypergolic Fuels with Hydrogen Peroxide..... | 90 |
| <i>Chungman Kim, Hongjae Kang, Eunkwang Lee, Jongkwang Lee</i>                                                                    |    |
| Development and Performance Testing of a “Green” Hydroxylammonium Nitrate-Based Monopropellant in a Lab-Scale Thruster .....      | 94 |
| <i>Jordan Silver, Timothy Velthuysen, Jean Pitot, Michael Brooks, Glen Snedden, Thabang Mdhuli, Sanele Msomi, Jason Denny</i>     |    |

|                                                                                                                      |     |
|----------------------------------------------------------------------------------------------------------------------|-----|
| Impact of Turbulent Prandtl and Schmidt Numbers on Numerical Heat Flux Predictions in the LUMEN Thrust Chamber ..... | 101 |
| <i>Clara Morris, Dirk Schneider, Robson Hahn, Tim Horschler, Justin Hardi, Ben Thornber</i>                          |     |
| Pyrolysis Stability of Different Methane Fuel Qualities for Regenerative Cooling Rocket Engines Usage .....          | 116 |
| <i>Taras Koturbash, Jules Heldens, Sebestyén Orhan Cadirci, Jens Fridh</i>                                           |     |
| Experimental Investigation of a 10N Class Vortex-Cooled Methane/Oxygen Bipropellant Thruster .....                   | 124 |
| <i>Mousa Aqailan, Yahia Badran, Azm Najjar, Kholoud Khatibi, Shmaa Al Hemeiri, Jeongmoo Huh</i>                      |     |
| Overview of Valve Developments at Łukasiewicz-ILOT .....                                                             | 128 |
| <i>Krzysztof Pietrzak, Dominik Kublik</i>                                                                            |     |
| Design, Manufacturing and Test of China's Largest Niobium Alloy Rocket Nozzle.....                                   | 143 |
| <i>Hanmo Shen, Linfeng Liu, Yanlei Sun, Wei Yang, Le Huang, Liangliang Jin, Nuomin Bai, Fei Yang</i>                 |     |

### **C4.3 SOLID AND HYBRID PROPULSION (1)**

|                                                                                                                                                                                                                                                                                                   |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Design and Testing of a Hybrid Rocket Motor Using Paraffin Based Solid Fuel Blended with Bio Additives for Performance Enhancement.....                                                                                                                                                           | 153 |
| <i>Sunil Bista, Mohan Tamang, Shraddha Lamichhane, Lelin Adhikari, Ankit Khanal, Hari Ram Shrestha</i>                                                                                                                                                                                            |     |
| Pioneering Indonesia's First Academic Solid Rocket: A Sustainable and Low-Cost Propellant for Future Space Endeavors .....                                                                                                                                                                        | 164 |
| <i>Afiq Sulistya, Muhammad Zulfa Dhiya'Ulhaq, Daris Cahyo Adi, Fathur Rahman, Abdul Aziz</i>                                                                                                                                                                                                      |     |
| Nitrous Oxide/Polyethylene Based Sounding Rocket Development in UAE.....                                                                                                                                                                                                                          | 168 |
| <i>Ozan Kara, Joao Martos, Carmine Carmicino, Henrique Argentieri, Ahmet Eren Vahapoglu, Renan Vilela, Aijaz Khan, Anthony Roque Ccacya, Amna Alhosani, Ghalyah Aldhanhani, Hessa Almarzooqi, Lorenzo Milli, Vito Salvatore</i>                                                                   |     |
| Static Fire Test of a Piston-Fed Hybrid Autophagy Engine .....                                                                                                                                                                                                                                    | 177 |
| <i>Martin Gros, Alexandre David, Théo Filleul</i>                                                                                                                                                                                                                                                 |     |
| A Quest to Indigenous Launch Capability Via Hybrid Rocket Propulsion – Lessons Learned from Development of Pescadore Engine.....                                                                                                                                                                  | 184 |
| <i>Tzu Yu Lin, Cheng-Hsueh Lee, Shih-Sin Wei, Yu-Chieh Cheng, Alfred Lai, Chien-Ming Chen</i>                                                                                                                                                                                                     |     |
| Performance Testing of a 7 kN Hybrid Rocket Motor Under Varying Propellant Conditions.....                                                                                                                                                                                                        | 192 |

| Design, Analysis, and Experimental Evaluation of a Cold Gas Thruster System for Martian Drone Propulsion.....                                                                | 1146 |
| <i>Akshat Sharma</i>                                                                                                                                                         |      |
| A Dual-Use Propulsion System for Extended Space Exploration .....                                                                                                            | 1153 |
| <i>Isa Guliyev, Fagan Mirzayev</i>                                                                                                                                           |      |
| Atmosphere-Breathing Electric Propulsion (ABEP) to Extend Spacecraft Lifespan in Very-Low Earth Orbits (VLEOs).....                                                          | 1158 |
| <i>Jeremy Hanks Reyes Huaman, Rivaldo Carlos Duran-Aquino, Elam Hazael Salomón Fernández Lagos, Leonardo Jesus Vivas Alania, John Guillermo Pilares Aique, Abel Since</i>    |      |

#### **C4.IPB INTERACTIVE PRESENTATIONS - IAF SPACE PROPULSION SYMPOSIUM**

|                                                                                                                                        |      |
|----------------------------------------------------------------------------------------------------------------------------------------|------|
| Experimental Validation of Numerical Methodologies in Liquid-Liquid Coaxial Swirl Injector Design.....                                 | 1176 |
| <i>Felix Liu, Gavin Heisser, Grayson Kirk-Elliot, Mackenzie Andershock, Evelyn Gehrig</i>                                              |      |
| SuperMagdrive: Next Generation Propulsion for Larger Spacecraft.....                                                                   | 1186 |
| <i>Alex Chandler, Thomas Clayson, Adam Baker</i>                                                                                       |      |
| Enhancement of the Main Sub-Systems in Student Researched and Developed (SRAD) Hybrid Rocket Engine (HRE).....                         | 1191 |
| <i>Malgorzata Majda, Olgierd Barganski, Mateusz Czapski, Mikolaj Duszkievicz, Tomasz Giedrys, Mikolaj Kumorowski, Wiktor Sieklicki</i> |      |
| Pressurization Analysis of Cryogenic Propellant Tanks: Investigating Collapse Factor and L/D Ratio Influence .....                     | 1198 |
| <i>Tegin Berkay Budak, Süleyman Kural</i>                                                                                              |      |
| A Novel Versatile Test Bench for Liquid Bipropellant Rocket Testing and Numerical Combustion Simulations .....                         | 1208 |
| <i>Giuseppina Persico, Sergio Cassese, Stefano Mungiguerra, Raffaele Savino</i>                                                        |      |
| Efficient Mission Analysis for Small Satellites: Maneuver Planning, Constellation Deployment, and Propulsion Optimization.....         | 1217 |
| <i>Giuseppe Di Pasquale, Daniel González-Arribas, Gianni Pecora, Daniel Talavera Jimenez, Samuel Reskala Eguiarte</i>                  |      |

|                                                                                                                                              |      |
|----------------------------------------------------------------------------------------------------------------------------------------------|------|
| Integral and Probe Characteristics of a Laboratory Model of an Accelerator with Closed Electron Drift on a Mixture of Reactive Gases .....   | 1227 |
| <i>Victor Riazanov, Dmitrii Antsiferov, Anastasiia Mekh</i>                                                                                  |      |
| Reduced-Order Models for Radiative Heat Loads Estimation in Liquid Rocket Engines.....                                                       | 1239 |
| <i>Marco Fabiani, Mario Tindaro Migliorino, Daniele Bianchi, Francesco Nasuti</i>                                                            |      |
| Solid Hydrocarbon Propellants for Electrothermal Plasma Micro-Thrusters .....                                                                | 1248 |
| <i>Thimthana Lee</i>                                                                                                                         |      |
| Design and Testing of a Throttleable Hydrogen Peroxide/Kerosene Propulsion System Pressurized by Electric Pumps.....                         | 1257 |
| <i>Xuesong Guo</i>                                                                                                                           |      |
| Low-Order Modeling and Analysis of Propulsion Control Strategies for Autogenous Pressurization in Methane-Oxygen Rocket Engines .....        | 1268 |
| <i>Sinyoung Park, Eunkwang Lee, Chanyong Park, Minwoo Lee</i>                                                                                |      |
| Development of Turbopumps for LE-9, First Stage Engine of H3 Launch Vehicle .....                                                            | 1274 |
| <i>Taiichi Motomura</i>                                                                                                                      |      |
| Testing Campaign of the Solar Electric Propulsion System for the Emirates Mission to the Asteroid Belt .....                                 | 1279 |
| <i>Mariam Alhammadi, Suzan Green</i>                                                                                                         |      |
| Geometrical Structure Design and Optimization on an Air-Augmented Solid Rocket Combustor .....                                               | 1284 |
| <i>Zhaoyang Tian, Yiming Zhang, Xue Yang, Xu Zhang, Yuhui Wang, Yihan Dou, Lei Shi</i>                                                       |      |
| Hypersonic Air-Breathing and Combined Cycle Propulsion, and Hypersonic Vehicle .....                                                         | 1292 |
| <i>Kei Fukuzawa, Kotaro Iguchi, Hideki Moriai</i>                                                                                            |      |
| Aerodynamic Configuration Design and Simulation Analysis of Baffle-Type Fairings.....                                                        | 1299 |
| <i>Hua Zhang, Xun Wen, Limin Zhang, Xiaoguang Wang, Xiang Ji, Zhiqiang Tang</i>                                                              |      |
| Water-Based Integrated Multimodal Propulsion: A Disruptive Solution for Efficient In-Orbit Servicing and Space Debris Removal Missions ..... | 1304 |
| <i>Chengyu Ma, Mengke Guan</i>                                                                                                               |      |

#### **C4.LBA LATE BREAKING ABSTRACTS (LBA)**

|                                                                                                                                           |      |
|-------------------------------------------------------------------------------------------------------------------------------------------|------|
| Design and Experimental Validation of a Mass-Efficient Pancake Hybrid Rocket Motor with Vortex-Induced Flow for In-Space Application..... | 1310 |
| <i>Beste Boybasi, Mehmet Kemal Ergin</i>                                                                                                  |      |
| Enhancing Ignition Performance and Self-Sustained Combustion Via Wire Vibration in a Water–Metal Micropropulsion System .....             | 1320 |
| <i>Minwoo Han, Masaki Fujii, Sanguk Jeong, Hiroyuki Koizumi, Kimiya Komurasaki</i>                                                        |      |
| Ground Testing of High-Thrust Semi-Cryogenic Engine in ISRO: Mechanical Design Challenges and Solutions .....                             | 1329 |
| <i>Vivek S, Vinayaravi R, Praveen Shenbhagamoorthy, Dinesh Bajaj</i>                                                                      |      |
| Hybrid Rocket Development with Nitrox Blends Through Real-Gas Modeling and Planned Hot-Fire Testing for In-Space Applications .....       | 1337 |
| <i>Mehmet Kemal Ergin, Arif Karabeyoglu</i>                                                                                               |      |

Study on the Combustion Characteristics of LOX/Kerosene Pintle Injector Based on the State of  
Liquid Oxygen..... 1348  
*Yaming Zhao, Nanjia Yu*

Study on the Influence of Different Methane Injection Strategies on the Combustion Characteristics  
of RBCC Engines ..... 1355  
*Hui Liu, Jinying Ye, Shao Nie, Xiangyu Lin, Xianggeng Wei, Qin Fei*
