# TABLE OF CONTENTS

|                                                                                                                                                   |    |
|---------------------------------------------------------------------------------------------------------------------------------------------------|----|
| A Unified Deep Learning and Retrieval-Augmented System for Chest X-Ray Decision Support .....                                                     | 1  |
| <i>Mennatallah Habiba, Ahmed Abozeid, Adham Moussa, Hanin Eltabakh, Mariam Abdelbaki, Sameh Sherif</i>                                            |    |
| Leveraging AI for Precision Muscle Analysis and Performance Optimization .....                                                                    | 7  |
| <i>Shereen Afifi, Daniel Ashraf Ekdawi, Duaa Zuhair Al-Hamid, Radwa Taha<br/>Mohammed Abdel-Megeed Salem, Ibrahim Y Noshokaty</i>                 |    |
| A Comparative Study of Convolutional Layer Depths and Activation Functions in the Detection and<br>Classification of Diabetic Retinopathy .....   | 13 |
| <i>Saxon Vandenwollenberg, Sneha Chitte, Sudipta Modak, Esam Abdel-Raheem</i>                                                                     |    |
| Lung Cancer Detection Using Deep Learning Models: A Comparative Study of Preprocessing<br>Techniques with Explainable AI Integration .....        | 19 |
| <i>Hawraa Hotiet, Marwan AlHawat, Mohamad Abou Ali, Abdallah Kassem</i>                                                                           |    |
| Enhanced Performance High-Accuracy Wearable Non-EEG Seizure Detection Signal System .....                                                         | 25 |
| <i>Michael H. Zakhari, Ahmed H. Khalil, Hassan Mostafa</i>                                                                                        |    |
| SkyAid: A Low-Cost Autonomous Hexacopter for Resilient Medical Supply Delivery in GPS-Denied<br>Environments .....                                | 30 |
| <i>Mohamad Abou Ali, Khallad Mustafa, Reem Kisanieh, Mohamad Hajj-Hassan, Abdallah Kassem<br/>Ali Cherry</i>                                      |    |
| Inside GateMate: Analysis and Benchmarking of a New FPGA Architecture .....                                                                       | 35 |
| <i>Tarik Ibrahimović, Nedim Osmić</i>                                                                                                             |    |
| Prompt Engineering for Fpga Design: Llm-Driven Workflows Beyond Hls .....                                                                         | 41 |
| <i>Richard C. Yarnell, Paul Amoruso, Ronald F. DeMara</i>                                                                                         |    |
| TinyCNet: Turning Pretrained-CNNs to Edge-Ready FPGA Logic .....                                                                                  | 48 |
| <i>Mukesh Narayana Gadde, Kizheppatt Vipin, A. Amalin Prince</i>                                                                                  |    |
| Routability-Aware FPGA Design Automation with Graph Transformer Models .....                                                                      | 53 |
| <i>B. Naresh Kumar Reddy, Y. Charan Krishna, K Sarangam</i>                                                                                       |    |
| Hybrid FSR-Based Pseudo-Random Number Generator on FPGA for Encrypting Biometrics .....                                                           | 59 |
| <i>Keerthana Menon, Goutam Mali, Nalesh S, Babita Jajodia, Kala S</i>                                                                             |    |
| Secure and Optimized IP Design using Key-driven Cipher-Based Multi-layer Encrypted HLS<br>Watermarking Integrated with FA based Exploration ..... | 64 |
| <i>Anirban Sengupta, Vishal Chourasia, Nabendu Bhui</i>                                                                                           |    |
| A Frequency Automated Spurless Large Bandwidth EOPLL for a High Resolution LiDAR .....                                                            | 70 |
| <i>Aya Ghobashy, Faisal A. Hussien, Ahmed Emira</i>                                                                                               |    |
| SLM-Arch: Trade-Off Analysis and Optimized Hardware Design for Small Language Models .....                                                        | 76 |
| <i>Lantian Li, Mohamed M. Sabry Aly</i>                                                                                                           |    |
| Optimized Regression Modeling for Predicting Electrical Resistance in 3D Structures .....                                                         | 82 |
| <i>Nashaat El Halabi, Enayet Rahman, Mohamad Rahal, Michael Powner, Iasonas Triantis</i>                                                          |    |

|                                                                                                                                                                               |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Design of Low-Cost Hardware Chaos-Based Image Cryptosystem .....                                                                                                              | 89  |
| <i>Marwan Fetteha, Wafaa Sayed, Lobna Said</i>                                                                                                                                |     |
| A Hybrid Classical-Quantum Reinforcement Learning Agent for Real-Time Noise Suppression in Quantum Processors .....                                                           | 94  |
| <i>Awad Wehbe, Abdel-Mehsen Ahmad</i>                                                                                                                                         |     |
| Explainable Machine Learning for Trip-Level Battery Stress Prediction in Electric Vehicles .....                                                                              | 100 |
| <i>Joe Farah, Mohamad Rahal</i>                                                                                                                                               |     |
| Design of a 160- $\mu$ W OOK Transmitter Utilizing the Quenching Principle for Super-Regenerative Transceivers .....                                                          | 105 |
| <i>Sherif Saleh, Haytham Azmi, Hattan F. Abutarboush</i>                                                                                                                      |     |
| On the Extension of Boundary Scan Testing for Approximate Computing .....                                                                                                     | 110 |
| <i>Mahmoud Masadeh, Houssam Massalkhi, Doa'a Mohammad Aloqoul, Omar AlShorman</i>                                                                                             |     |
| Energy-Efficient Approximate Prewitt Filter Design .....                                                                                                                      | 115 |
| <i>Mahmoud Masadeh, Abdel Rahman Idrais, Omar AlShorman</i>                                                                                                                   |     |
| Analysis of the ZTC Bias Points in the FinFET Gate Capacitance and Transition Frequency .....                                                                                 | 120 |
| <i>Miguel Coelho, Pedro Toledo, Alexandra Matos, Rafael Martins, Rafael Ferreira, Boyapati Subrahmanyam</i><br><i>Luis B. Oliveira, José Soares Augusto, João P. Oliveira</i> |     |
| Comparative Robustness Analysis of Different Adder Topologies Using ASAP7 FinFET Technology .....                                                                             | 126 |
| <i>Umayia Mushtaq, Md. Waseem Akram, Dinesh Prasad</i>                                                                                                                        |     |
| Proposed a Ternary Adder Using CNTFET .....                                                                                                                                   | 132 |
| <i>Ramzi A. Jaber</i>                                                                                                                                                         |     |
| Utility of Non-Aligned Double Gate FET in the Design of Multi-Logic Digital Gate .....                                                                                        | 137 |
| <i>Lakshmi Sangam, Arun Kumar Sinha</i>                                                                                                                                       |     |
| Research on Key Technologies of EDA Software Based on RTL Code and AI Guidance .....                                                                                          | 142 |
| <i>Dan Liu, Zhe Zhang, Junhao Wang, Junhao Li</i>                                                                                                                             |     |
| End-to-End Transformer Acceleration Through Processing-in-Memory Architectures .....                                                                                          | 148 |
| <i>Xiaoxuan Yang, Peilin Chen, Tergel Molom-Ochir, Yiran Chen</i>                                                                                                             |     |
| Dataflow-Driven Neuromorphic Architectures for Edge AI: Theory, Design, and Applications .....                                                                                | 153 |
| <i>Bokyung Kim, Parshva Mehta, Yiran Chen</i>                                                                                                                                 |     |
| FERMI-ML: A Flexible and Resource-Efficient Memory-In-Situ SRAM Macro for TinyML Acceleration .....                                                                           | 159 |
| <i>Mukul Lokhande, Akash Sankhe, S. V. Jaya Chand, Shivangi Mishra, Santosh Kumar Vishvakarma</i>                                                                             |     |
| 3D Memristive In-Memory GAN for Automated Design of On-Glass Patch Antenna for Ku Band .....                                                                                  | 165 |
| <i>Shilpa Pavithran, Sruthi Pallathuvalappil, Alex James</i>                                                                                                                  |     |
| Low-Power CMOS Design of ReLU Activation Module for Neural Networks .....                                                                                                     | 171 |
| <i>Mohamed S. Ghoneim, Kasem Khalil, Magdy A. Bayoumi</i>                                                                                                                     |     |
| A Neuromorphic FPGA-Based Architecture for Energy-Efficient Visual Recognition .....                                                                                          | 176 |
| <i>Tianyang Li, Zhipeng Liao, Chengjun Zhang, Jie Yang, Mohamad Sawan</i>                                                                                                     |     |

|                                                                                                                                          |     |
|------------------------------------------------------------------------------------------------------------------------------------------|-----|
| A Power-Efficient, Fully-Adjustable, Bulk-Controlled, Linearized, Analog Integrated Gaussian Function Circuit for Kernel Functions ..... | 182 |
| <i>Daniela Papa, Emilios Georgiou, Theodoros Kantianis, Vasileios Moustakas, Vassilis Alimisis</i>                                       |     |
| <i>Paul P. Sotiriadis</i>                                                                                                                |     |
| Low-Energy Real-Time Self-Organizing Classifier Architecture for Edge SNN Applications .....                                             | 188 |
| <i>Uğur Eroğlu, Necati Teoman Bahar, Hasan Uluşan, Ali Muhtaroglu</i>                                                                    |     |
| Digital SNN in 5 nm FinFET CMOS with Latency-Reducing Hybrid Spiking Scheme Operated at 2.6 GHz .....                                    | 194 |
| <i>Marcel Kossel, Giovanni Cherubini, Matthias Brändli, Victoria Miguel Gullón Alfonso, Stanisław Woźniak</i>                            |     |
