

PROCEEDINGS OF SPIE

International Conference on Extreme Ultraviolet Lithography 2025

Toshiro Itani
Kurt G. Ronse
Patrick P. Naulleau
Paolo A. Gargini
Editors

22–25 September 2025
Monterey, California, United States

Sponsored by
SPIE

Cosponsored by
EUV Technology (United States) • Gigaphoton Inc. (Japan) • imec (Belgium) JSR Corporation (Japan) • Lasertec Corporation (Japan) • Lintec Corporation (Japan) • Litho Tech Japan Co., Ltd. (Japan) • Luxel Corporation (United States) • Nagase & Co., Ltd. (Japan) • Photronics Inc. (United States) • Sumitomo Chemical Co., Ltd. (Japan) • Tokyo Ohka Kogyo Co., Ltd. (Japan) • Veeco Instruments, Inc. (United States) • xLight, Inc. (United States)

Volume 13686

Proceedings of SPIE 0277-786X, V. 13686

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *International Conference on Extreme Ultraviolet Lithography 2025*, edited by Toshiro Itani, Kurt G. Ronse, Patrick P. Naulleau, Paolo A. Gargini, Proc. of SPIE 13686, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

ix Conference Committee

WEDNESDAY PLENARY SESSION

13686 04 **EUVL at other wavelengths: comparisons and opportunities (Invited Paper)** [13686-200]

EQUIPMENT ROADMAP: JOINT SESSION WITH PM AND EUVL

13686 05 **Progress in high-NA EUV lithography towards high-volume manufacturing (Invited Paper)** [13686-1]

13686 06 **Stitching at high-NA EUV: a first experimental study (Invited Paper)** [13686-2]

13686 07 **High-NA stitching: model and OPC assessment for logic metal printing with a low-n mask (Invited Paper)** [13686-3]

RESIST AND UNDERLAYER MATERIALS/PROCESS I

13686 09 **Impact of MOR anomalies on lithography and OPC: challenges and solutions (Invited Paper)** [13686-5]

13686 0D **Understanding the impact of the EUV photon absorption distribution in a patterned EUV resist and its lithographic performance** [13686-10]

13686 0E **Stochastic-aware hotspot detection with cycleGAN-augmented SEM data and uncertainty quantification for process control applications (Photronics Student Award, 2nd Place)** [13686-56]

PATTERNING AND PROCESS ENHANCEMENT

13686 0G **Controlling the resist profile in EUV imaging using source mask optimization** [13686-12]

13686 0H **Rigorous calibration of negative-tone and positive-tone development of novel EUV chemically amplified resist for performance characterization** [13686-13]

13686 0I **Optimization of contact hole printability in high-NA EUV** [13686-14]

13686 0J **Impact of anamorphic scaling on orientational dependence of high-NA EUV lithography** [13686-15]

- 13686 OK **Pupil, mask, wavefront co-optimization for enhanced EUV patterning: reducing LWR and evaluating overlay** [13686-16]
- 13686 OL **Mitigation of pattern collapse in EUV lithography using SCREEN's novel rinse technology for metal oxide resist** [13686-17]

PROCESS CONTROL AND STOCHASTICS

- 13686 OM **Lithography strategies on overlay control of backside processing in complementary field effect transistor (CFET) device (Invited Paper)** [13686-18]
- 13686 ON **Closing the stochastics resolution gap (Invited Paper)** [13686-19]
- 13686 OO **Three-dimensional cliff analysis method for defining patterning resolution in EUV lithography** [13686-20]
- 13686 OP **Energy-efficient EUV lithography using PFAS-free, light-curable underlayers for advanced nodes** [13686-21]
- 13686 OQ **Directional graph network models for resist processes: how does randomness in EUV photon develop into pattern anomalies or is it smoothed out in resist films?** [13686-22]
- 13686 OR **Alignment and overlay challenges and solutions for future nodes** [13686-23]
- 13686 OS **Defectivity-aware EUV process window characterization for monolithic complementary FET HAR and 3D patterning (Invited Paper)** [13686-24]

PELLICLE

- 13686 OT **Development progress of beryllium-based membranes for EUV pellicles (Invited Paper)** [13686-25]
- 13686 OV **Real-time observation of EUV-induced blister formation at various sample temperatures in pellicle-like materials** [13686-27]
- 13686 OW **Development of pellicle manufacturing technology for high-power EUV lithography** [13686-28]
- 13686 OX **Characterization of CNT pellicles in an EUV scanner environment and strategies to extend pellicle durability** [13686-106]

LITHOGRAPHY TOOLS, SOURCES, AND OPTICS

- 13686 10 **0.33 NA EUV systems for high-volume manufacturing (Invited Paper)** [13686-32]
- 13686 11 **EUV spectrum of high power LPP source (Invited Paper)** [13686-33]
- 13686 12 **Sustaining EUV materials innovation: source upgrade and status update from the Berkeley MET5** [13686-34]
- 13686 14 **Plasma dynamics and future of LPP-EUV source for semiconductor manufacturing** [13686-36]
- 13686 15 **Disentanglement of mask impact on global and local CDU variation in EUV lithography** [13686-37]

RESIST AND UNDERLAYER MATERIALS/PROCESS II

- 13686 16 **Unraveling the role of environment on the lithographic performance of metal oxide resists: key role of oxygen during post-exposure bake (Invited Paper)** [13686-6]
- 13686 17 **Overcoming throughput and defects tradeoffs in EUV photolithography for 2D patterning (Invited Paper)** [13686-38]
- 13686 18 **EUV CAR-NTD process with new organic solvent based-developer applicable for various features** [13686-39]
- 13686 1A **Computationally guided formulation of advanced developers for EUV resists** [13686-41]
- 13686 1B **EUV underlayer material design for defect-free negative-tone development process: controlling photoresist-underlayer intermixing** [13686-42]
- 13686 1C **Latent images and potential distribution on resists visualized by laser-based photoemission electron microscopy** [13686-45]

EUV LITHOGRAPHY EXTENDIBILITY

- 13686 1D **How lithography lost the leadership position in semiconductor technology (Invited Paper)** [13686-46]
- 13686 1E **Navigating the research landscape for hyper-NA EUV lithography and future patterning technologies (Invited Paper)** [13686-48]
- 13686 1F **Pixelated source polarization optimization for hyper-NA EUV lithography (EUV Tech Award for Emerging Talent in the Industry, 1st Place)** [13686-51]

13686 1G **DSA process optimization for low-NA EUV extreme pitch contact pattern rectification (Invited Paper)** [13686-49]

POSTER SESSION

- 13686 1H **Dry development of EUV resists via low electron temperature plasma** [13686-52]
- 13686 1I **A holistic approach to extending resist material viability in extreme ultraviolet lithography** [13686-53]
- 13686 1K **When correlation becomes causation: deep learning for complex anomaly detection in semiconductor yield** [13686-58]
- 13686 1M **High-brightness and compact LPP-EUV light source for inspection systems** [13686-60]
- 13686 1N **Parameter reconstruction in CD-SAXS with full-wave Maxwell solver and Bayesian optimization** [13686-61]
- 13686 1O **Mitigating best focus shift in high-NA EUV lithography via optical constant screening** [13686-63]
- 13686 1Q **Image twist and placement error during EUV exposure** [13686-67]
- 13686 1R **Development of a reflective scintillator with fluorescent nanodiamond-embedded porous anodic alumina substrate for EUV detection** [13686-68]
- 13686 1S **Investigation of a novel EUV/SXR image sensor based on a CVD fluorescent diamond-fiber optic plate (FD-FOP) scintillator** [13686-69]
- 13686 1T **Magnetostriction in Invar-type alloys: the role of co-substitution for Ni and dimensional stability under magnetic field** [13686-70]
- 13686 1V **Iodine-based underlayer for enhanced EUV absorption: comparison between aromatic and aliphatic core** [13686-73]
- 13686 1W **Effect of organic ligand and metal nano-cluster core structure on resist performance of inorganic-organic hybrid resist materials for EUV lithography** [13686-74]
- 13686 1X **Study on dose reductions of organometal chemically amplified resists for sustainability of EUV lithography** [13686-75]
- 13686 1Y **Relationship between the dissolution kinetics of photoresists near underlayer and the surface free energies (surface tensions) of photoresist, developers, and underlayers** [13686-76]

13686 20 **Laser-assisted enhancement of etching resistance in PMMA via silicon ablation** [13686-79]

13686 21 **Energy-efficient optical crosslinking system and PFAS-free underlayers in ArFi lithography: key enablers for sustainable semiconductor technologies and systems** [13686-81]

DIGITAL POSTER SESSION

13686 25 **Tabletop EUV lithography system for resist characterization** [13686-80]

13686 26 **Seeing more at 13.5 nm with EUV sCMOS camera technology** [13686-64]
