Volume 13727

Proceedings of SPIE 0277-786X, V. 13727

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Artificial Intelligence in Photonics*, edited by Liangcai Cao, Partha P. Banerjee, Lili Yi, Bo Gu, Proc. of SPIE 13727, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

- v *Symposium Committees*
- ix *Conference Committee*

AI-POWERED DEVICES AND SYSTEMS

- 13727 03 **Machine learning strategies for fiber optic biosensors in real-time wastewater surveillance** [13727-1]
- 13727 04 **Inverse design of silicon Mach–Zehnder modulators using genetic algorithm for multiobjective optimization in on-chip photonics computing** [13727-2]
- 13727 06 **Deep-learning-based depth reconstruction from single-shot fringe patterns with physical guidance** [13727-6]

AI IN OPTICAL COMMUNICATION AND IMAGING

- 13727 07 **Communication signal recognition based on multimodal fusion (Invited Paper)** [13727-7]
- 13727 0A **Enhancing quantitative phase imaging with physics-informed deep learning** [13727-10]

AI-ENABLED COMPUTATIONAL IMAGING

- 13727 0C **The logical essence of quantum entanglement: from the Paul Kwiat experiment to the foundations of photonic artificial intelligence** [13727-12]

AI-DRIVEN PHOTONIC MATERIALS AND DEVICES

- 13727 0G **System for determining the structure and control of orientation of simple shape elements for machine vision systems** [13727-18]
- 13727 0H **AI-enhanced pulse shaping for high-power femtosecond pulse trains at THz repetition rates** [13727-15]

POSTER SESSION

- 13727 0J **Recurrent neural network enabled adaptive carrier phase recovery algorithm for high-speed coherent optical transmission systems** [13727-19]

- 13727 OK **Distributed multichannel primary signal processing system with prediction used in control systems** [13727-20]
- 13727 OL **Morphological analysis of vector data derived from raster masks of informative regions** [13727-21]
- 13727 OM **Deep block-based depth map reconstruction using feature-level RGB-D fusion with PLIP strategy** [13727-22]
- 13727 ON **AI-driven hierarchical binarization and aggregation for efficient data preparation in optoelectronic imaging systems** [13727-23]
- 13727 OO **OptiInverse: a generative AI tool for optical device reverse design** [13727-24]
- 13727 OP **Dynamic task transfer of optical diffractive neural networks based on optical-visual collaborative prompt framework** [13727-25]
