# TABLE OF CONTENTS

|                                                                                                                                                                                                                     |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Congestion and Operational Efficiency Simulation for Modern Airspace in Florida Using Agent-Based Modeling.....                                                                                                     | 1   |
| <i>Sakurako Kuba, M. Ilhan Akbas</i>                                                                                                                                                                                |     |
| Fast Surrogate Models for Adaptive Aircraft Trajectory Prediction in En Route Airspace .....                                                                                                                        | 11  |
| <i>Nick Pepper, Marc Thomas, Zack X. Conti</i>                                                                                                                                                                      |     |
| Creating and Testing a Discrete Event Simulation Model of Embry-Riddle Aeronautical University's Ramp, Runway, and Taxiway Operations .....                                                                         | 34  |
| <i>Joshua McGurn, Bryan Watson</i>                                                                                                                                                                                  |     |
| Conditioning Aircraft Trajectory Prediction on Meteorological Data with a Physics-Informed Machine Learning Approach .....                                                                                          | 46  |
| <i>Amy Hodgkin, Nick Pepper, Marc Thomas</i>                                                                                                                                                                        |     |
| A Framework for Assuring the Accuracy and Fidelity of an AI-Enabled Digital Twin of en Route UK Airspace .....                                                                                                      | 64  |
| <i>Adam Keane, Nick Pepper, Chris Burr, Amy Hodgkin, Dewi Gould, John Korna, Marc Thomas</i>                                                                                                                        |     |
| A Probabilistic Digital Twin of UK en Route Airspace for Training and Evaluating AI Agents for Air Traffic Control.....                                                                                             | 93  |
| <i>Nick Pepper, Adam Keane, Amy Hodgkin, Dewi Gould, Edward Henderson, Lynge Lauritsen, Christos Vlahos, George De Ath, Richard Everson, Richard Cannon, Alvaro S. Castro, John Korna, Ben Carvell, Marc Thomas</i> |     |
| Decentralized Conflict Resolution for Urban Air Mobility: A Scalable Agent-Based Modeling Approach Using Swarm Intelligence.....                                                                                    | 113 |
| <i>Rajagopal Sugumar, Mustafa I. Akbas</i>                                                                                                                                                                          |     |
| Rapid Identification and Detailed Evaluation of UAS Encounter Scenarios through Integrated Simulation .....                                                                                                         | 128 |
| <i>Jose A. G. Núñez, Jim Pamplona, John Lee, Jonathan F. O. Gomez, Mai D. Evans-Lichtigfeld, Ilhan M. Akbas</i>                                                                                                     |     |
| Networked Simulation for Cybersecurity Evaluation of Small Unmanned Aircraft Systems in Dense Urban Environments.....                                                                                               | 142 |
| <i>Abel Diaz-Gonzalez, Austin Coursey, Bryce Bjorkman, Daniil Shatokhin, Cailani Lemieux-Mack, Noah Dahle, Abenezzer Taye, Robert Canady, Xenofon Koutsoukos, Gautam Biswas, Bryan Ward</i>                         |     |
| Extending an Automated Methodology for Simulation Model Calibration to Manufacturer and Flight Test Validation Data .....                                                                                           | 159 |
| <i>Madison E. Harper, Bikash Kunwar, Imon Chakraborty</i>                                                                                                                                                           |     |
| Implementing “Good Enough” for Modeling and Simulation Verification and Validation .....                                                                                                                            | 220 |
| <i>Patricia Turner, Benjamin P. Ferguson, Anton Vanderwyst</i>                                                                                                                                                      |     |
| Design and Implementation of Generic HIL Framework for Autonomous Aerial Vehicles: An Efficient Approach.....                                                                                                       | 230 |
| <i>Wajeeh Hassan, Imran Mir, Manzar Abbas, Jehanzeb Masud, Muhammad M. Safdar</i>                                                                                                                                   |     |

|                                                                                                                                                                            |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| A Simulation Environment for Performance Evaluation of Flight Path Reconstruction Methods in Extended Flight Envelope Applications .....                                   | 244 |
| <i>Gregory Moszczynski, Peter R. Grant, Vincent Myrand-Lapierre</i>                                                                                                        |     |
| A High-Fidelity 3D Simulation Environment for Multi-Aircraft Operations.....                                                                                               | 260 |
| <i>Timothy Bautista, Fengyu Wang, Advika Govindarajan, Liang Sun, Yining Zhang, Jing Chen, Richie R. Suganda, Bin Hu, Michael S. Politowicz, Eric T. Chancey</i>           |     |
| Modeling and Control of Aerial Slung Load System Using Partial Feedback Linearization and Koopman Operator Theory.....                                                     | 270 |
| <i>N. S. Abhinay, Kaushik Das, Debasish Ghose</i>                                                                                                                          |     |
| Development of a Simulation Environment for Separating Air Vehicles .....                                                                                                  | 280 |
| <i>Ryan McLaughlin, Jacob Yancosek, Mario G. Perhinschi</i>                                                                                                                |     |
| Numerical and Experimental Analysis of a Gliding Turn-Back Maneuver Following an Engine Failure.....                                                                       | 293 |
| <i>Nicholas Lototsky</i>                                                                                                                                                   |     |
| Reinforcement-Learning Control of a Hybrid Airship Using a High-Fidelity Digital Twin.....                                                                                 | 310 |
| <i>Nikolay Lyan, Ismail Bayazit</i>                                                                                                                                        |     |
| Effects of Actuator and Sensor Abnormal Conditions on Missile Performance .....                                                                                            | 334 |
| <i>Ryan McLaughlin, Jacob Yancosek, Mario G. Perhinschi</i>                                                                                                                |     |
| System Identification Algorithm Considering Multiple Frequency Modes and its Application to Attitude Dynamics of a Large Flexible Structure Satellite .....                | 350 |
| <i>Takeshi Yamasaki, Hiroyuki Takano</i>                                                                                                                                   |     |
| SISIFOS: Specialized Illumination Simulator for Orbiting Spacecraft.....                                                                                                   | 366 |
| <i>Iason G. Velentzas, Juan-Diego Florez-Castillo, Noah Bruckner, Mehregan Dor, Panagiotis Tsiotras</i>                                                                    |     |
| REALMs: An Open-Source Simulation Framework for the Development of Self-Landing Rocket Controls .....                                                                      | 378 |
| <i>Kaleb Ugalde</i>                                                                                                                                                        |     |
| Effects of Motion Fidelity on Pilot Performance Using Mixed-Reality Visuals .....                                                                                          | 397 |
| <i>Peter Zaal, Matt L. Blanken, Samuel P. Orth, Supreethi V. Penmetcha, Paul Slade</i>                                                                                     |     |
| Cyclograms as a Novel Analysis Method for Aircraft Handling Qualities Evaluations .....                                                                                    | 412 |
| <i>Dakota Musso, Emily Vo, Mike Jones</i>                                                                                                                                  |     |
| Simulator Study on Ride Comfort of Flexible Aircraft .....                                                                                                                 | 437 |
| <i>Jana Schwithal, Ole Ostermann, Jan-Philipp Buch, Dominik Niedermeier, Daniel Drewiacki, Grigory Castro</i>                                                              |     |
| Mitigating the Black Hole Illusion in Night Approaches Using Synthetic, Enhanced, and Augmented Reality Vision Systems .....                                               | 451 |
| <i>Karma Yangdon, Dhruv Panchal, Siddharth M. Sharma, Chinmay Khatavkar, Samman Kesharwani, Anandmoorthi Thaarutraj, Narender Singh, Basant K. Agarwal, V. R. S. Kumar</i> |     |
| Integrating Real-Time Wind Hazard Prediction and Visual Augmentation in Full-Flight Simulators to Assess the Pilot's Workload .....                                        | 467 |
| <i>Michael Kurz, Maximilian Dauner, Balazs Fischer, Gudrun Socher, Alexander Knoll</i>                                                                                     |     |

|                                                                                                                    |     |
|--------------------------------------------------------------------------------------------------------------------|-----|
| Julia Programming for Real-Time Flight Control on Embedded Platforms .....                                         | 484 |
| <i>Benjamin Chung, Rajeev Voleti, Jason Zhou</i>                                                                   |     |
| Hypersonic Wake Signature Modeling for Electro-Optical Infrared Sensor Simulation Using Multi-Domain Physics ..... | 493 |
| <i>Ryan Kynor, Felipe Mercado, Valerio Viti, Peter Douglass, Maxime Cailler, Dhaval Tantry, Bruce Crawford</i>     |     |
| Development of a General Radar Cross Section Model for Complex Flying Vehicle Motion .....                         | 509 |
| <i>Jacob Yancosek, Ryan McLaughlin, Mario G. Perhinschi, Warren Boord, Phillip Pace</i>                            |     |
| AI-Powered Dent Analysis of Aircraft Engine Nacelles Using Altair PhysicsAI.....                                   | 526 |
| <i>Hariprasad Gowda, Wiley Abbott</i>                                                                              |     |
| Reducing Uncertainty for Modeling and Simulation Experimentation & Analysis.....                                   | 535 |
