Volume 13833

Proceedings of SPIE, 1605-7422, V. 13833

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Harnessing Light-Based Technologies for Reproductive, Maternal, and Neonatal Health: From Fundamental Discovery to Translation*, edited by Kylie R. Dunning, Christine M. O'Brien, Proc. of SPIE 13833, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

ADVANCED IMAGING OF REPRODUCTIVE TISSUE STRUCTURE AND FUNCTION

- 13833 02 **Preparation and supervised segmentation of optical coherence tomography (OCT) images of the human uterotubal junction** [13833-4]
- 13833 03 **Optical properties of human and porcine fallopian tube tissue** [13833-6]
- 13833 04 **Volumetric and dynamic OCT screening of human testicular tissue comparing unfixed and fixed samples** [13833-8]

PLACENTAL AND FETAL BRAIN IMAGING

- 13833 05 **Optical imaging of the effects of maternal alcohol exposure on fetal brain microvasculature** [13833-23]
- 13833 06 **Application of correlation mapping optical coherence angiography to study the impact of prenatal cannabinoid exposure on fetal brain vasculature** [13833-24]

MONITORING NEONATAL AND MATERNAL HEALTH

- 13833 07 **Comparative study of speckle plethysmography and photoplethysmography in diverse skin tones to further postpartum hemorrhaging monitoring technology** [13833-27]
- 13833 08 **Pulsatile tissue phantom platform for the evaluation of optical and electrical wearables for non-invasive hemoglobin assessment** [13833-28]

POSTER SESSION

- 13833 09 **Analysis of primordial follicle distribution from optical coherence tomography images using object detection** [13833-32]
