Volume 13835

Proceedings of SPIE, 1605-7422, V. 13835

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Neural Imaging and Sensing 2026*, edited by Ling Fu, Jun Ding, Proc. of SPIE 13835, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

MICROSCOPY I

13835 02 **Dual-channel miniaturized widefield microscope for cortical imaging in freely moving mice with real-time hemodynamic correction (Invited Paper)** [13835-2]

MICROSCOPY II

13835 03 **Quantitative phase tomography with breaking-through diffraction-limit resolution in biomedicine** [13835-10]

NOVEL TECHNIQUES I

13835 04 **Transverse-sheet illumination microscopy enables high-speed, high-resolution, large-scale volumetric imaging for neural and developmental dynamics** [13835-18]

NOVEL TECHNIQUES II

13835 05 **Assessing adeno-associated virus delivery with whole-body fluorescence cryotomography in reporter animals** [13835-21]

DIFFUSE OPTICAL IMAGING II

13835 06 **AR-guided probe positioning system for fNIRS using a head-mounted display** [13835-23]

13835 07 **Scalp patch-based diffuse optical tomography (DOT) for tumor monitoring** [13835-35]
