SPIE

Volume 13844

Proceedings of SPIE, 1605-7422, V. 13844

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Microfluidics, BioMEMS, and Medical Microsystems XXIV*, edited by Bastian E. Rapp, Colin Dalton, Proc. of SPIE 13844, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

MICROFLUIDICS I

- 13844 02 **Hybrid injection molding-DLP fabrication of embedded microfluidic electrodes for in-situ mechanical stress monitoring (Invited Paper)** [13844-1]
- 13844 03 **Cascaded spiral channel microfluidic for high purity and throughput medical sample pre-processing for direct *S. aureus* sensors** [13844-3]

APPLICATIONS I

- 13844 05 **Transparent, flexible, wearable microneedle biosensors used in plant sensing applications** [13844-10]
- 13844 06 **Microfluidic synthesis of giant unilamellar vesicles sensitive to tumor microenvironment pH with Janus gel compartments** [13844-27]

MICROFLUIDICS II

- 13844 07 **Real-time in vivo imaging of therapeutic bio-distribution with a miniaturized implantable fluorescence imager (Best Student Paper Award)** [13844-12]
- 13844 08 **Self-sustained microdroplet generation using 3D-printed fluidic cell** [13844-13]

MICROFABRICATION II

- 13844 09 **Additive manufacturing of micro(fluidic) systems via sustainable 3D printing (Invited Paper)** [13844-14]
- 13844 0A **A 3D printed microfluidic DNA extraction device** [13844-15]

APPLICATIONS II

- 13844 0B **Improving efficiency in acoustophoretic particle sorting: finite element modeling and experimental validation** [13844-17]
- 13844 0C **Design and simulation of compact portable photoacoustic LED driver circuit** [13844-26]
