Volume 13851

Proceedings of SPIE, 1605-7422, V. 13851

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Photons Plus Ultrasound: Imaging and Sensing 2026*, edited by Alexander A. Oraevsky, Lihong V. Wang, Proc. of SPIE 13851, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

- ix *Conference Committee*
- xi *Introduction*

CLINICAL IMAGING

- 13851 02 **3D photoacoustic and ultrasound system with large field-of-view: development and application in extremity imaging** [13851-1]
- 13851 03 **Comparison of skin tone and target detectability in simulated, tissue-mimicking phantom, and clinical photoacoustic breast images** [13851-8]

SMALL-ANIMAL IMAGING I: MICROSCOPY

- 13851 04 **Fast laser diode scanning photoacoustic microscopy using direct model inversion** [13851-10]
- 13851 05 **Single cell nucleus imaging of ethanol-damaged brain organoids using ultraviolet photoacoustic microscopy** [13851-13]

SMALL-ANIMAL IMAGING II: TOMOGRAPHY

- 13851 06 **Experimental validation of a virtual imaging framework for three-dimensional functional optoacoustic tomography** [13851-15]
- 13851 07 **Impact of modeling transducer spatial impulse response and acoustic heterogeneity on image reconstruction accuracy in photoacoustic computed tomography** [13851-16]
- 13851 08 **Multispectral functional photoacoustic imaging of goat eyes for estimation of tissue chromophores** [13851-19]

ADVANCES IN ULTRASOUND DETECTION I

- 13851 09 **Pressure and temperature dependence of optical resonance wavelength (ORW) of large-element surface micromachined optical ultrasound transducers (SMOUTs)** [13851-26]

ADVANCES IN ULTRASOUND DETECTION II

- 13851 0A **A compact photoacoustic sensing probe using surface-micromachined optical ultrasound transducer (SMOUT)** [13851-35]

BEST PAPER COMPETITION I

- 13851 OB **Tri-modal photoacoustic, ultrasound, and fluorescence imaging using a transparent ultrasound transducer array in lymphedema patients (Best Paper Award)** [13851-37]
- 13851 OC **Whole-body functional and molecular imaging by integrated photoacoustic tomography and ultrasound imaging** [13851-41]
- 13851 OD **Dual-modal photoacoustic and ultrasound imaging for smarter biopsy decisions in thyroid nodules** [13851-43]
- 13851 OE **Rapid photoacoustic and ultrasonic computed tomography for improved early breast tumor diagnosis** [13851-42]

BEST PAPER COMPETITION II

- 13851 OF **Real-time monitoring of cerebrospinal fluid flow and assessment of brain waste clearance via photoacoustic imaging** [13851-44]
- 13851 OG **Joint estimation of a CT-informed skull model and initial pressure distribution in transcranial photoacoustic computed tomography (Best Paper Award)** [13851-46]
- 13851 OH **Arrayed polymer microring resonator ultrasound detector for wide-field functional photoacoustic brain imaging** [13851-49]
- 13851 OI **Quantitative evaluation of DCE-PACT reconstruction methods using virtual imaging studies** [13851-47]

MACHINE LEARNING AND IMAGE RECONSTRUCTION I

- 13851 OJ **Application of a learned SIR compensation method to improve elevational resolution in ring-array-based photoacoustic computed tomography** [13851-52]
- 13851 OK **Deep multimodal fusion network for ovarian tumor classification using ultrasound and photoacoustic image** [13851-53]
- 13851 OL **Enhancing large-aperture photoacoustic computed tomography with deep learning: from single finger to human hand imaging** [13851-54]
- 13851 OM **Uncertainty-aware hybrid Mamba network for robust medical image segmentation across modalities** [13851-55]

MACHINE LEARNING AND IMAGE RECONSTRUCTION II

- 13851 ON **Learning from skinless datasets to improve target detectability in photoacoustic breast imaging across skin tones** [13851-56]
- 13851 OO **Assessment of image reconstruction methods for photoacoustic computed tomography based on signal detection performance** [13851-59]
- 13851 OP **Joint reconstruction of initial pressure and sound speed distributions in 3D photoacoustic computed tomography using object constraints** [13851-60]

SIGNAL AND IMAGE PROCESSING

- 13851 OQ **Hybrid diffusion model for cost-effective 3D multiparametric photoacoustic computed tomography** [13851-66]

ADVANCES IN MICROSCOPY

- 13851 OR **Label-free mid-infrared dichroism-sensitive photoacoustic microscopy for assessing engineered heart tissue** [13851-69]
- 13851 OS **Multiparametric transrectal ultrasound and photoacoustic imaging system for prostate cancer diagnosis** [13851-72]
- 13851 OT **Pulse slope may be more important than pulse length in photoacoustic wave generation: insights from an OR-PAM imaging experiment using a lab-made laser diode driver** [13851-74]

QUANTITATIVE IMAGING

- 13851 OU **Comparing vascular contrast of breast cancer in multispectral optoacoustic tomography above and below 1000 nanometers** [13851-78]

SUNDAY POSTER SESSION

- 13851 OV **Multiview linear-array photoacoustic computed tomography with improved elevational resolution in 3D** [13851-83]
- 13851 OW **Data-driven spectral unmixing in photoacoustic computed tomography using blind source separation techniques** [13851-84]
- 13851 OX **Nanosecond pulsed light emitting diode (LED) based high-speed photoacoustic computed tomography using multiple single-element ultrasound transducers** [13851-86]
- 13851 OY **Battery-operated handheld LED-based photoacoustic imaging system integrated with a commercial wireless ultrasound probe** [13851-87]

- 13851 0Z **Wireless ultrasound device based photoacoustic imaging system (wUS-PA)** [13851-88]
- 13851 10 **Phantom-guided superresolution of ultrasound brain scans via diffusion models** [13851-91]
- 13851 11 **Acoustic distortion correction in transcranial photoacoustic imaging using full-waveform inversion** [13851-92]
- 13851 12 **Knowledge-distilled transformer framework for ultralightweight signal enhancement in laser-scanning photoacoustic microscopy** [13851-93]
- 13851 13 **Optimizing pulse width and analog gain for enhanced signal fidelity in LED-based photoacoustic imaging** [13851-96]
- 13851 14 **Novel data compression technique for real-time and continuous photoacoustic microscopy** [13851-97]
- 13851 15 **Skull-mimicking phantoms for transcranial ultrasound imaging** [13851-98]
- 13851 16 **Compact handheld thermoacoustic imaging probe with metamaterial antenna for differentiating different grades of hemorrhage in neonates** [13851-99]
- 13851 17 **Optoacoustic spectral studies of fluorescence probes for tumor hypoxia sensing in cells** [13851-100]
- 13851 18 **Dual slider-crank-based optical-resolution photoacoustic microscopy system** [13851-152]
- 13851 19 **Quantitative assessment of beam intensity rotational uniformity in side scanning optical miniature probes using BRUCE** [13851-153]

MONDAY POSTER SESSION

- 13851 1A **Fundamental study on signal response throughout the process from light pulse generation to ultrasound transducer detection in photoacoustic imaging** [13851-105]
- 13851 1B **A pulsed laser diode array for deep tissue photoacoustic imaging** [13851-107]
- 13851 1C **Microscopic acoustic property measurement by laser-induced/detected ultrasound** [13851-110]
- 13851 1D **Multiscale feature fusion network based on self-attention for photoacoustic reconstruction** [13851-111]
- 13851 1E **Personalized fluence correction for photoacoustic imaging using ultrasound-based tissue segmentation** [13851-113]
- 13851 1F **Towards optoacoustic transient shaping using a flexible fiber laser system** [13851-114]

- 13851 1G **Design of a low-cost OCT system integrated with advanced image processing for soft tissue and microstructure imaging** [13851-115]
- 13851 1H **Correcting transcranial photoacoustic distortion using complex-valued deep learning** [13851-116]
- 13851 1I **Noise-suppressed and signal-selective photoacoustic image reconstruction: a novel approach to overcome DAS limitations** [13851-117]
- 13851 1J **Portable laser diode-based multispectral photoacoustic and ultrasound imaging system for point-of-care screening applications** [13851-118]
- 13851 1K **Enhanced deep-tissue photoacoustic imaging using extended-pulse LED illumination and a 5 MHz ultrasound probe** [13851-119]
- 13851 1L **Ultrasound-guided correction of skin tone-dependent signal bias in dual-wavelength LED-based photoacoustic imaging** [13851-120]
- 13851 1M **Optical coherence tomography as a tool for mouse skull imaging** [13851-121]
- 13851 1N **Development of gelatin-based breast phantom for photoacoustic imaging applications** [13851-122]
- 13851 1O **A case series highlighting HFUS features in mimickers of melanoma** [13851-123]
- 13851 1P **Analytical ray tracing model for designing a GRIN rod lens-based photoacoustic imaging probe** [13851-125]
- 13851 1Q **Variable pulse repetition enables safe and rapid spiral scan in a handheld photoacoustic microscope** [13851-149]
- 13851 1R **Equivalent test optical system (ETOS) concept for pre-assembly verification of optical working distance in GRIN rod lens probes** [13851-151]
- 13851 1S **Tellurovanadate glass-based thermal sensors integrated with photoacoustic imaging for biomedical applications** [13851-81]
