Volume 13852

Proceedings of SPIE, 1605-7422, V. 13852

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Biomedical Light Scattering XVI*, edited by Adam Wax, Vadim Backman, Proc. of SPIE 13852, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

SCATTERING MICROSCOPY

- 13852 02 **Advancing evanescent light scattering microscopy for single-particle characterization of gene delivery nanoparticles** [13852-6]
- 13852 03 **Axially swept light-sheet microscopy using scattering and fluorescence contrast mechanisms (Invited Paper)** [13852-7]

SPECKLE AND DYNAMIC LIGHT SCATTERING

- 13852 04 **Human scalp and brain blood flow SCOS sensitivities via superficial temporal artery occlusion** [13852-11]

POSTER SESSION

- 13852 05 **Characterization and correction of bias in diffuse reflectance-based skin diagnostics via optical scattering models of benign and malignant skin tissues** [13852-19]
- 13852 06 **Low-cost food-product-based tissue phantoms with adjustable light scattering spectra** [13852-24]
- 13852 07 **Experimental recovery of optical transport coefficients from bilayer tissue-mimicking phantoms using inverse diffusion theory modelling** [13852-17]
