SPIE

Volume 13858

Proceedings of SPIE, 1605-7422, V. 13858

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Single Molecule Spectroscopy and Superresolution Imaging XIX*, edited by Rainer Erdmann, Mike Heilemann, Felix Koberling, Proc. of SPIE 13858, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

FUNDAMENTAL SINGLE MOLECULE TECHNIQUES

- 13858 02 **A Monte Carlo-based deep learning framework for accurate single-molecule spectroscopic imaging** [13858-36]
- 13858 03 **Size determination of lipid nanoparticles on a single-particle level using laser scanning microscopy** [13858-1]
- 13858 04 **Sensing negative-cone rotational diffusion of dipole-like emitters** [13858-4]

FLUORESCENCE TECHNIQUES

- 13858 05 **Superresolved photoluminescence lifetime and intensity mapping of semiconductor quantum dots patterned on DNA origami** [13858-7]

NANOSCOPY I: HIGH-THROUGHPUT IMAGING OF BIOLOGICAL SAMPLES

- 13858 06 **Structural cell biology with smart STED microscopy** [13858-9]
- 13858 07 **Volumetric single-molecule localization imaging with system-aware deep learning** [13858-10]

NANOSCOPY III: SINGLE-MOLECULE TECHNIQUES

- 13858 08 **Optimized MINFLUX microscopy for reliable high-speed 2D/3D single-particle tracking (Invited Paper)** [13858-20]
- 13858 09 **Ångström-accurate and precise localization microscopy** [13858-21]
- 13858 0A **Single-objective lattice light sheet microscopy with microfluidics for improved 3D single-molecule superresolution imaging (PicoQuant Best Paper Award)** [13858-23]

NEW INSTRUMENTATION FOR SINGLE-MOLECULE TECHNIQUES

- 13858 0B **SNR performance comparison between SPAD arrays, PMT, and APD** [13858-25]

POSTER SESSION

- 13858 0C **Excitonic organic films for lifetime compression and charge-state stabilization of nanodiamond NV⁻ centers** [13858-29]
- 13858 0D **Correlative fluorescence lifetime and photobleaching lifetime imaging for nanoscale characterization of surface defects in NiO photocatalysts** [13858-30]
- 13858 0E **Characterization of a new, quantum-inspired superresolution technique for high-NA fluorescence microscopy** [13858-31]
- 13858 0F **Correcting biased nanodomain size clustering associated with localization density in single-molecule location microscopy** [13858-32]
- 13858 0G **Super-spectral-resolution Raman spectroscopy-enhanced characterization of diamond materials** [13858-35]
