**Volume 13861**

Proceedings of SPIE, 1605-7422, V. 13861

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIEDigitalLibrary.org](http://SPIEDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Quantitative Phase Imaging XII*, edited by Yang Liu, YongKeun Park, Proc. of SPIE 13861, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

---

**Paper Numbering:** A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

v *Conference Committee*

---

## METHODS I

---

- 13861 02 **Quantitative holo-tomographic flow cytometry: unlocking label-free lysosomal biomarkers for LSDs (Invited Paper)** [13861-1]
- 13861 03 **Extremely high-throughput quantitative phase imaging of live-cells with a multi-camera array microscope (QPI Best Paper Award)** [13861-3]

---

## METHODS II

---

- 13861 04 **Round robin study of Fourier ptychographic, digital holographic and hybrid holo-ptychographic microscopes** [13861-7]

---

## APPLICATIONS I

---

- 13861 05 **Quantification of *Colwellia psycherythraea* motility in microgravity with a custom digital holographic microscope (Invited Paper)** [13861-13]

---

## METHODS (X-RAY)

---

- 13861 06 **Multislice-based nonlinear phase retrieval for high-resolution cryo-electron tomography (Invited Paper)** [13861-19]

---

## ALGORITHM/AI

---

- 13861 07 **Computational aberration correction for epi-mode intensity-based quantitative phase imaging systems (QPI Best Paper Award)** [13861-21]
- 13861 09 **High-throughput quantitative phase imaging enabled by a large field-of-view machine vision camera (Invited Paper)** [13861-23]

---

## APPLICATIONS II

---

- 13861 0A **Quantitative phase imaging of the dynamics of epithelial monolayers (Invited Paper)** [13861-24]

---

### APPLICATIONS III

---

- 13861 OB **Quantitative phase imaging normalized mass as a functional readout for drug response in glioblastoma** [13861-29]

---

### POSTER SESSION

---

- 13861 OC **Deep-learning-enhanced phase amplitude imaging in digital holographic microscopy** [13861-40]
- 13861 OD **Space-bandwidth optimization using fractional Fourier transform in digital holographic microscopy of living cells** [13861-41]
- 13861 OE **3D refractive index imaging from coherent label-free microscopy: inverse scattering reconstruction and the influence of illumination modes** [13861-44]
- 13861 OF **Acceleration of phase retrieval algorithms through intermediate phase unwrapping** [13861-45]
- 13861 OG **Inverse photonic design using a holotomographic reconstruction** [13861-47]
- 13861 OH **Quantitative classification of MCF-7 and MCF-10A cell lines using a polarization digital holographic microscope** [13861-50]
- 13861 OI **Label-free high-content analysis at the single cell level utilizing artificial neural network supported correlative bright field imaging and digital holographic quantitative phase microscopy** [13861-55]
- 13861 OJ **Sphere drop mimics tumor outgrowth to evaluate the rate and depth of migratory plasticity via quantitative phase imaging** [13861-56]
- 13861 OK **3D viscoelastic modeling of cells with holotomography and Brillouin spectroscopy** [13861-68]
- 13861 OL **Quantitative label-free 3D imaging and analysis of live cells and organoids** [13861-69]
- 13861 OM **Label-free quantitative phase analysis of bovine spermatozoa under oxidative stress** [13861-70]
