Volume 13865

Proceedings of SPIE, 1605-7422, V. 13865

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Computational Optical Imaging and Artificial Intelligence in Biomedical Sciences III*, edited by Liang Gao, Guoan Zheng, Seung Ah Lee, Proc. of SPIE 13865, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

COMPUTATIONAL METAOPTICS AND LENSLESS IMAGING

13865 02 **Information-optimal phase mask design for lensless imaging** [13865-22]

COMPUTATIONAL DESIGN AND RECONSTRUCTION

13865 03 **Split-Lohmann lenses for imaging and display (Invited Paper)** [13865-25]

WAVEFRONT SHAPING AND DEEP TISSUE IMAGING I

13865 04 **Synthetic wavelength imaging through volumetric and dynamic scattering media**
[13865-30]

13865 05 **3D endoscopy in scattering environments using synthetic wavelength holography**
[13865-29]

MULTIDIMENSIONAL OPTICAL IMAGING

13865 06 **Snapshot compressive imaging reconstruction: from traditional AI to generative AI (Invited Paper)** [13865-36]

EMERGING IMAGING TECHNIQUES

13865 08 **Quantum imaging and sensing (Keynote Paper)** [13865-6]

13865 09 **Arbitrary illumination microscopy with encoded depth (AIMED) through multiplane compressive imaging (Invited Paper)** [13865-8]

POSTER SESSION

13865 0A **Using physics-informed AI to enable fibre TM recovery from minimal partial measurements enabling ultra-thin endoscopes** [13865-47]

13865 0B **Learning-based optical flow for image reconstruction during multispectral endoscopies**
[13865-48]

- 13865 OC **Conditional generative adversarial network-based image enhancement model for confocal microscopy** [13865-49]
- 13865 OD **Correcting the meniscus effect in phase-contrast cell images using fully convolutional dense networks** [13865-50]
- 13865 OE **Dense associative memory in a nonlinear optical Hopfield neural network** [13865-56]
- 13865 OF **Cell Mod-SE(2): group equivariant deep learning for multi-class analysis of phase contrast microscopy images** [13865-59]
- 13865 OG **Deep-learning-driven transcranial focused ultrasound for enhancing glymphatic clearance in Alzheimer's treatment** [13865-60]
- 13865 OH **Machine-learning-driven analysis of surface plasmon resonance imaging for automated biomolecular binding detection** [13865-63]
- 13865 OI **Label-free microscopy combined with deep learning enables optical phenotyping of pancreatic cancer** [13865-65]
- 13865 OJ **AI-based diagnosis of central serous retinopathy and diabetic macular edema using OCT imaging** [13865-66]
- 13865 OK **Super-resolution and denoising of corneal B-scan OCT imaging using diffusion model plug-and-play priors** [13865-67]
- 13865 OL **End-to-end reconstruction of OCT optical properties and speckle-reduced structural intensity via physics-based learning** [13865-68]
- 13865 OM **Pushing the limits of non-destructive teeth microcracks imaging: a multi-spectral approach** [13865-70]
- 13865 ON **Data-first simulation for radial phase retrieval: annulus curriculum and forward-consistency supervision** [13865-74]
