**Volume 13874**

Proceedings of SPIE 0277-786X, V. 13874

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Fiber Lasers XXIII: Technology and Systems*, edited by Matthias Savage-Leuchs, Jeffrey W. Nicholson, Proc. of SPIE 13874, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

ISSN: 0277-786X

ISSN: 1996-756X (electronic)

ISBN: 9781510696624

ISBN: 9781510696631 (electronic)

---

**Paper Numbering:** A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

vii *Conference Committee*

---

## HIGH POWER FIBER LASERS I

---

- 13874 02 **Intrinsically low-nonlinearity optical fibers (Invited Paper)** [13874-1]
- 13874 03 **Diffraction-limited ytterbium fiber laser with 308W at ~980nm** [13874-2]
- 13874 04 **8kW single-mode ytterbium fiber laser with beam quality  $M^2 < 1.1$  and SRS-to-signal ratio < -40 dB using direct diode pumping** [13874-3]
- 13874 05 **300-watt single-frequency Yb<sup>3+</sup>-doped phosphate fiber amplifier** [13874-4]

---

## TWO MICRON FIBER LASERS I

---

- 13874 06 **Quantifying energy transfer in Tm-doped silicate fiber (Invited Paper)** [13874-9]
- 13874 07 **Reliable indirectly cooled high-power thulium fiber laser** [13874-10]
- 13874 08 **Power scaling of thulium-doped fiber lasers for medical and industrial use** [13874-11]
- 13874 09 **1.1kW monolithic thulium-doped fiber laser in quasi-continuous-wave operation** [13874-12]

---

## NOVEL FIBERS, EFFECTS, AND MEASUREMENTS

---

- 13874 0A **Additive manufacturing of silica gain fibers: challenges and opportunities (Invited Paper, 3D Printing Best Paper Award in LASE)** [13874-13]
- 13874 0B **Single-mode operation using 15 and 25 $\mu$ m core double-clad Tm-doped fiber with >50% efficiency for 2 $\mu$ m applications** [13874-14]
- 13874 0C **Determination of LMA fiber modes using beam profile measurements of a fiber laser while operating at high power** [13874-17]

---

## TWO MICRON FIBER LASERS II

---

- 13874 OD **25W-class continuous-wave holmium-doped fiber amplifier with narrow-linewidth and linear polarization** [13874-19]
- 13874 OE **Watt-level two-micron single-frequency DBR fiber lasers** [13874-20]

---

## HIGH POWER FIBER LASERS II

---

- 13874 OF **Characterization challenges and trends in specialty optical fibers (Invited Paper)** [13874-22]
- 13874 OG **Millijoule pulse energy, kilowatt average power from a polarization maintaining, large-mode-area fiber amplifier** [13874-23]
- 13874 OH **High-power/energy all-fiber nanoseconds pulsed MOPA system based on Yb-doped spun tapered double-clad fiber** [13874-24]
- 13874 OI **Enhanced TMI threshold using a novel 40/250 polarization-maintaining Yb-doped multiclad fiber** [13874-25]
- 13874 OJ **Thermal management for high-performance laser systems: challenges and opportunities** [13874-26]

---

## VISIBLE AND MID-IR LASERS

---

- 13874 OL **Wavelength-swept fiber laser based on dispersion tuning for the 1700nm band** [13874-28]

---

## SPECTRAL AND COHERENT BEAM COMBINATION

---

- 13874 OM **Detailed performance comparison of fiber-based CBC and SBC laser weapon systems (Invited Paper)** [13874-30]
- 13874 ON **Multicore-fiber-based, high-power femtosecond CPA laser system with fast dynamic beam shaping capabilities** [13874-32]
- 13874 OO **Experimental investigations on the relative phase stability in amplifying multicore fibers (Fiber Lasers Best Student Presentation Award)** [13874-33]

---

### TWO MICRON FIBER LASERS III

---

13874 OP **Power and energy scaling of efficient in-band pumped Tm-doped fiber lasers** [13874-40]

---

### NARROW LINEWIDTH FIBER LASERS

---

13874 OQ **Generation of high-power, continuous-wave, low-noise harmonics of 1064nm and 1030nm Yb-doped fiber lasers in the visible and UV spectral range (Invited Paper)** [13874-44]

13874 OR **Spectral line broadening in depolarized, high-power narrow-linewidth fiber lasers** [13874-45]

13874 OS **Fast monitoring of spectral broadening in seed sources for narrow-linewidth fiber lasers** [13874-47]

---

### MANUFACTURING, COMPONENTS, AND DIODE LASERS

---

13874 OT **Review of laser diode pump development for fiber lasers (Invited Paper)** [13874-48]

13874 OU **Composition study and performance comparison of Er-doped fibers with scaled absorption for C- and L-band applications** [13874-49]

13874 OV **Integrated short-length PM fiber amplifiers for large-scale beam combining** [13874-52]

---

### NOVEL LIGHT SOURCES AND APPLICATIONS

---

13874 OW **Supercontinuum generation in a visible region of 1- $\mu$ m-band noise-like pulses with high spectral flatness and excellent temporal stability** [13874-54]

13874 OX **Ultralow-noise Brillouin fiber laser tunable from 900nm to 930nm** [13874-55]

13874 OY **Polarization-maintaining, large-mode-area erbium-ytterbium co-doped fiber amplifier with high beam quality** [13874-56]

---

### ULTRAFast AND HIGH ENERGY LASERS II

---

13874 OZ **Ultrafast low-noise Yb: fiber laser for precise femtosecond-level synchronization applications** [13874-59]

## POSTER SESSION

---

- 13874 10 **High-power, low-noise, single-frequency fiber laser at 920nm using custom polarization maintaining Nd-doped fibers** [13874-46]
- 13874 11 **Generation and evolution of mode-locked pulses in a self-pulsing Er-doped fiber laser** [13874-62]
- 13874 12 **Pump pulse optimization for mid-infrared 3 $\mu$ m fluoride-glass Raman fiber lasers** [13874-63]
- 13874 13 **Designing high-contrast fiber front ends for scalable laser systems** [13874-64]
- 13874 14 **Spectral purity and relative intensity noise characteristics of cascaded random Raman fiber lasers using conventional pump sources** [13874-65]
- 13874 15 **Wideband wavelength and bandwidth tunable noise-like pulse laser source using intracavity polarization-sensitive Michelson interferometer** [13874-66]
- 13874 16 **High-power core-pumped low-quantum-defect fiber laser oscillator at 1030nm** [13874-70]
- 13874 17 **871nm single-frequency fiber laser source for quantum computing applications** [13874-71]
- 13874 18 **Nested-loop phase synchronization in dual-stage modular tiled aperture coherent beam combining based on feedback from multiple off-axis locations in far-field plane** [13874-72]
