SPIE

Volume 13877

Proceedings of SPIE 0277-786X, V. 13877

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Nonlinear Frequency Generation and Conversion: Materials and Devices XXV*, edited by Jeffrey Moses, Christopher R. Phillips, Proc. of SPIE 13877, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

NONLINEAR OPTICS IN QUANTUM LIGHT APPLICATIONS

- 13877 02 **Controlling the quantum noise of intense light (Invited Paper)** [13877-1]
- 13877 03 **Nonlinear quantum interferometer: generating and sensing mid-infrared radiation for cancer diagnostics** [13877-4]

ULTRABROADBAND INTEGRATED AND GUIDED WAVE NONLINEAR OPTICS

- 13877 04 **Record wide all-normal dispersion supercontinuum in cooked fiber** [13877-8]

MATERIALS AND METHODS FOR UV GENERATION

- 13877 05 **Flat-top beam deep-UV generation in CsLiB₆O₁₀ crystal** [13877-15]

ADVANCES IN OPTICAL PARAMETRIC OSCILLATORS

- 13877 07 **Ultrashort pulse generation in a SESAM-driven continuous-wave optical parametric oscillator** [13877-19]
- 13877 08 **Watt-level narrowband nanosecond pulsed laser source at 6.15 μ m and 6.45 μ m for biomedical applications based on ZGP OPO in a nonplanar resonator** [13877-21]

LIGHT GENERATION AND AMPLIFICATION IN QUADRATIC NONLINEAR WAVEGUIDES

- 13877 09 **PPLN-based optical parametric amplifiers for optical communications and quantum information processing (Invited Paper)** [13877-60]
- 13877 0A **Continuous-wave, high-power second-harmonic generation in laser-written PPLN-waveguides** [13877-23]
- 13877 0B **THz-level, mode-hop-free, broadly tunable mid-infrared source based on DFG in ridge PPLN waveguides** [13877-24]

EXTENDING WAVELENGTH AND BANDWIDTH VIA GAS-PHASE DEVICES

13877 OC **Efficient nonlinear post-compression to sub-20fs using an air-filled multipass cell** [13877-28]

NOVEL CONCEPTS FOR FIELD SYNTHESIS, SHAPING, AND MEASUREMENT

13877 OE **Field-resolved measurements of few-cycle laser waveforms (Invited Paper)** [13877-31]

13877 OF **Compact, efficient, and spatially uniform spectral broadening by combined Kerr and cascaded quadratic nonlinearities** [13877-33]

13877 OG **Dynamic laser pulse shaping for future ultrafast electron and x-ray instrumentation** [13877-34]

NOVEL CONCEPTS FOR FREQUENCY UPCONVERSION AND GENERATION

13877 OH **Revisiting up-conversion imaging in the single photon counting age** [13877-48]

13877 OI **Experimental investigation of optimal conventional CW pump laser architectures for low-intensity noise supercontinuum generation in standard telecom fibers** [13877-49]

POSTER SESSION

13877 OJ **Second harmonic generation of a CO₂ laser at 10.5910 μ m in Te_{1-x}Se_x** [13877-54]

13877 OK **Few watt VUV/DUV fiber lasers via high-order harmonic generation** [13877-61]
