Sponsored and Published by
SPIE

Volume 13878

Proceedings of SPIE 0277-786X, V. 13878

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Real-time Measurements, Rogue Phenomena, and Single-Shot Applications XI*, edited by Daniel R. Solli, Georg Herink, Serge Bielawski, Proc. of SPIE 13878, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

REAL-TIME SPECTROSCOPY AND IMAGING FROM VIS TO THz I

- 13878 03 **Noncollinear single-shot detection of terahertz waves (Invited Paper)** [13878-1]
- 13878 05 **Quantitative single-shot terahertz spectroscopy using supercontinuum-based spectral encoding in dynamic refractive media (Invited Paper)** [13878-3]

REAL-TIME SPECTROSCOPY AND SINGLE SHOT DETECTION

- 13878 0J **Advanced particle beam diagnostics using single laser pulse** [13878-18]

POSTER SESSION

- 13878 0M **Single-shot imaging achieving 685 billion FPS using spatial multiplexing** [13878-21]
