Volume 13892

Proceedings of SPIE 0277-786X, V. 13892

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Optical Components and Materials XXIII*, edited by Shibin Jiang, Michel J. Digonnet, Proc. of SPIE 13892, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

ISSN: 0277-786X

ISSN: 1996-756X (electronic)

ISBN: 9781510697010

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii *Conference Committee*

LASERS

- 13892 02 **Threshold reduction and bandwidth broadening of a quantum dot coherent comb laser by self-injection locking** [13892-2]
- 13892 03 **Nanosecond 100kHz coherent PM pulsed laser with SPM limited 8kW peak power at 1940nm** [13892-3]
- 13892 04 **Single-mode Er:Yb fiber solutions for power scaling in next-generation 1.5 μ m fiber laser systems** [13892-4]

RARE-EARTH DOPED MATERIALS AND DEVICES I

- 13892 05 **Investigation of optical losses in large-core metal-coated fibers in the 1.5–2 μ m spectral range (Invited Paper)** [13892-5]
- 13892 06 **Comparative study on upconversion and downconversion luminescence of Er³⁺, Yb³⁺ co-doped BaY_{0.67}Mo_{0.33}O₃ phosphors for optical thermometry** [13892-7]
- 13892 07 **Engineering of mercury cadmium telluride doping concentration for narrowband infrared detection** [13892-8]

RARE-EARTH DOPED MATERIALS AND DEVICES II

- 13892 08 **Precise measurements of change of polarizability of inverted Yb³⁺ ions through electronically induced refractive index change in a ring laser cavity** [13892-9]
- 13892 09 **Exploring persistent luminescence of common powders for non-invasive flow visualization** [13892-11]
- 13892 0A **Sensitive detection of ultraviolet and x-ray radiation with photoluminescent nano-matter based on rare-earth doped compounds** [13892-12]

INNOVATIVE FIBERS AND DEVICES

- 13892 0B **Numerical and deep learning-based analysis of coupling efficiency in side-pumped fiber combiners** [13892-18]

GRATINGS AND SUBWAVELENGTH OPTICAL ELEMENTS

- 13892 0C **Optical sensors based on diffraction gratings and waveguides for environmental analysis** [13892-20]
- 13892 0D **Image detection by metamaterial lattices in dark state guided-mode resonance** [13892-22]

DETECTORS, MODULATORS, AND SWITCHES I

- 13892 0E **Segmented electrodes and high permittivity claddings for high-performance thin-film lithium niobate modulators** [13892-25]
- 13892 0F **Sputtered thin-film lithium niobate for photonic integrated circuits** [13892-26]
- 13892 0G **Thin film lithium niobate photonic integrated circuit for laser beam scanning imaging** [13892-27]

DETECTORS, MODULATORS, AND SWITCHES II

- 13892 0H **Novel DC drift compensation method for thin-film lithium niobate photonic integrated circuit for laser beam scanning imaging application** [13892-28]
- 13892 0I **Comparison of the sensitivity of silicon and silicon carbide diodes and photodiodes under beryllium and lithium ion irradiation** [13892-29]
- 13892 0J **Reversible structural phase transition in MoO_x thin films for tunable optical devices** [13892-30]

INNOVATIVE PHOTONICS FABRICATION

- 13892 0K **Development of soft glass structured optical fibers based on 3D preform printing (Invited Paper)** [13892-33]
- 13892 0L **Hot viscous glass micromachining on wafer level enabling miniaturized high precision and low roughness concave mirrors for optical cavities** [13892-34]
- 13892 0M **Advancements in SWIR FPA technologies** [13892-36]

POSTER SESSION

- 13892 0N **Comparative spectroscopic study of Dy³⁺ doped crystals and glasses for visible-infrared laser applications** [13892-37]

- 13892 0O **From local to global: hybrid AI-driven large-scale exploration for complex optical systems** [13892-40]
- 13892 0P **Effect of pumping configuration in enhancing Brillouin limited output power in narrow-linewidth fiber amplifiers** [13892-42]
- 13892 0Q **White light emission from $Zn_2P_2O_7:Tb^{3+}$, Sm^{3+} , Dy^{3+} phosphors under near-UV excitation** [13892-43]
- 13892 0R **The first demonstration of SWIR imaging utilizing Mg_2Si PD linear arrays** [13892-44]
- 13892 0S **Influence of silver nanoparticles on the spectral characteristics of Er^{3+} ions in potassium barium borate glass** [13892-45]
- 13892 0T **Host dependent energy upconversion emission from Erbium doped fluoride crystals** [13892-47]
- 13892 0U **Broadband high sensitivity photodetection based on two-dimensional perovskite-coated optical fiber Bragg grating device** [13892-48]
- 13892 0V **Temperature-dependence of ground-state infrared absorption in thulium-doped yttrium aluminum garnet** [13892-51]
- 13892 0W **Stress-induced optical aberrations: investigating birefringence in automotive windshields and its impact on camera systems** [13892-54]
- 13892 0X **Optimization of dual phase modulation schemes for enhanced SBS suppression in high power narrow linewidth fiber amplifiers** [13892-55]
- 13892 0Y **Comparative performance of sCMOS and UV-sensitive EMCCD cameras for advanced UV imaging and spectroscopy** [13892-56]
- 13892 0Z **InGaAs APD with improved recovery time** [13892-57]
