Volume 13899

Proceedings of SPIE 0277-786X, V. 13899

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Advanced Fabrication Technologies for Micro/Nano Optics and Photonics XIX*, edited by Christophe Moser, Eva Blasco, Debashis Chanda, Georg von Freymann, Proc. of SPIE 13899, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii *Conference Committee*

NANOPHOTONIC SENSORS AND EMITTERS

- 13899 02 **Photon-trapping surface structures in ultrafast photodetectors: overcoming hardware limits with AI-driven computational imaging (Invited Paper)** [13899-2]
- 13899 03 **Scaling InP photonics to 150mm: hot ESC etching for high-volume manufacturing** [13899-4]

METAPHOTONICS, ACTUATORS, AND SENSORS

- 13899 04 **High-performance electro-thermal laser induced graphene actuators on flexible polymer for dynamic optical beam control** [13899-6]
- 13899 05 **Optimization of gold nanostructure preparation for heavy metal sensing** [13899-7]
- 13899 06 **Optimization of plasmonic bowtie nanoantenna design and fabrication with swarm algorithm proximity effect correction** [13899-8]
- 13899 07 **Investigation of helium-irradiation induced damage in ferroelectric single crystals through ion beam channeling analysis** [13899-9]

ADVANCED MANUFACTURING I: JOINT SESSION WITH CONFERENCES 13899 AND 13918

- 13899 08 **A low-cost, open-access two-photon lithography tool** [13899-11]

RAPID FABRICATION

- 13899 09 **AI-accelerated high-fidelity volume fabrication of reflow-compatible micro-optics via UV imprinting** [13899-17]
- 13899 0A **Next-generation microimprinting: enabling ultraflat base layers for high-end micro-optics applications** [13899-18]

3D PRINTING: JOINT SESSION WITH CONFERENCES 13884 AND 13899

- 13899 0B **An industrial workflow for scalable micro- and nanostructures** [13899-21]

WAVEGUIDES

- 13899 0C **Flexible 3D-printed optical waveguides for photonic networks and multisensing applications** [13899-24]
- 13899 0D **Fabrication of flexible PDMS optical waveguides by soft lithography and capillary filling** [13899-25]
- 13899 0E **Nanoimprint lithography for the fabrication of multimode waveguide-based out-of-plane optical interconnect** [13899-26]

VOLUMETRIC ADDITIVE MANUFACTURING

- 13899 0F **Intensity adjustment of tomographic volumetric additive manufacturing projection image sets** [13899-32]

MICROLENSSES

- 13899 0G **Performance of micro-optics imprint technology (Invited Paper)** [13899-33]

INORGANIC MATERIAL PRINTING

- 13899 0H **Wafer scale mechanical micro-machining of integrated optics in vacuum cells for quantum technologies (Invited Paper)** [13899-39]
- 13899 0I **Towards real-time in-line quality control for two-photon polymerisation** [13899-40]

SENSORS

- 13899 0J **Photonic band gap in three-dimensional amorphous foam-like ceramic networks** [13899-42]
- 13899 0K **Tips versus holes: $\times 10$ higher scattering in FIB-made plasmonic nanoscale arrays for spectral imaging** [13899-43]
- 13899 0L **Freeform microlens arrays surface description** [13899-44]

POSTER SESSION

- 13899 OM **Lift-off resist for optical filters using high-temperature sputtering** [13899-46]
- 13899 ON **Star grazing with alumina grass: antireflection coatings in the visible and near-infrared on IPX-clear microlenses assisted by grass-like alumina** [13899-47]
- 13899 OO **Fabrication of customized diffractive optics in under ten minutes using a consumer-grade resin 3D printer (Best Student Paper Award)** [13899-51]
- 13899 OP **Diffractive optical element-based coupler for multicore fibers fabricated using two-photon polymerization (3D Printing Best Paper Award in OPTO, Conference Best Paper Award)** [13899-52]
- 13899 OQ **Stamp material evaluations for next generation wafer level optics** [13899-54]
- 13899 OR **Data-driven process optimization of x-cut thin-film periodically poled lithium niobate waveguides using two-photon microscopy** [13899-55]
