Volume 13906

Proceedings of SPIE 0277-786X, V. 13906

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *AI and Optical Data Sciences VII*, edited by Masaya Notomi, Tingyi Zhou, Proc. of SPIE 13906, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

ISSN: 0277-786X

ISSN: 1996-756X (electronic)

ISBN: 9781510697294

ISBN: 9781510697300 (electronic)

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii *Conference Committee*

INVERSE DESIGN FOR ADVANCED OPTICAL SYSTEMS I

- 13906 02 **Democratizing electronic-photonic AI systems: an open-source AI-infused cross-layer codesign and design automation toolflow** [13906-3]
- 13906 03 **CARDIO-LENS: simulation-guided design of miniaturized metalens systems for intravascular OCT imaging (Invited Paper)** [13906-4]

INVERSE DESIGN FOR ADVANCED OPTICAL SYSTEMS II

- 13906 04 **AI-enhanced multifacet optical gas sensors** [13906-9]

COMPUTATIONAL IMAGING I

- 13906 05 **Deep learning for IR lensless face recognition in under-display system** [13906-12]
- 13906 06 **Optical image compression for computer vision via a metasurface implementation of the Radon transform** [13906-15]

COMPUTATIONAL IMAGING II

- 13906 07 **AI-assisted anomaly detection from SEM images in semiconductor fabrication** [13906-17]
- 13906 08 **Deep learning-driven image enhancement in low-light upconversion imaging using two-dimensional layered nonlinear optical mirror** [13906-18]

ADVANCED PIC TECHNOLOGIES I

- 13906 09 **Reframing AI acceleration: from electrons to photons in the Fourier domain (Invited Paper)** [13906-20]

PHYSICS-INSPIRED AI COMPUTING FRAMEWORK

- 13906 0A **From ML to physics informed neural networks: scalable digital twin for stress-aware design in photonic structures** [13906-31]

- 13906 0B **Whispering-gallery-mode sensing via physics-informed machine learning** [13906-33]
- 13906 0C **Physics-regularized simulation-based inference for quantitative near-infrared spectroscopy** [13906-34]

PHOTONIC AI ACCELERATOR

- 13906 0D **A versatile, ultrafast, and resource-efficient ONN-driven task scheduler inspired by modern GPT frameworks (Invited Paper)** [13906-68]
- 13906 0E **Performance comparison of photonic reservoir computing systems (Invited Paper)** [13906-37]

PHOTONIC NEURAL NETWORKS I

- 13906 0F **Integrated diffractive deep neural networks for near-infrared and visible wavelengths** [13906-40]
- 13906 0G **Passive photonic recurrent neural networks via spatiotemporal multimode fiber dynamics** [13906-46]
- 13906 0H **Fiber-length agnostic all-optical equalisation using silicon photonics neural networks** [13906-43]
- 13906 0I **Large-scale, high-parallelism, high-speed optical matrix-matrix multiplier (Invited Paper)** [13906-44]

PHOTONIC NEURAL NETWORKS II

- 13906 0J **End-to-end training and inference in integrated photonic deep neural networks** [13906-45]
- 13906 0K **Optoelectronic nonlinear activation with photochromic weighting based on silicon photomultipliers and light-emitting diodes** [13906-48]

DIFFRACTIVE OPTICAL PROCESSORS

- 13906 0L **Optimizing DMD embeddings for optical computing with physics-inspired data preprocessing** [13906-52]

NOVEL ARCHITECTURE FOR OPTICAL COMPUTING I

- 13906 0M **Physically generated masking sequences with GHz tunability for time delay reservoir computing** [13906-60]

NOVEL ARCHITECTURE FOR OPTICAL COMPUTING II

- 13906 0O **Comb-based parallel information processing and artificial intelligence (Invited Paper)**
[13906-66]
- 13906 0P **Evaluation of hardware-induced errors in optically computing transformer models**
[13906-65]

OPTICAL SENSING AND REAL-TIME INFERENCE

- 13906 0Q **Towards smart mobility: coordinated intersection control using multiagent reinforcement learning and visible light communication** [13906-71]
- 13906 0R **True-to-physics modeling enables sensing with a handful of photons detected per inference in total** [13906-73]
- 13906 0S **A machine learning-based temperature field reconstruction for food processing** [13906-75]

POSTER SESSION

- 13906 0T **Weather-resilient perimeter protection using DAS and deep learning** [13906-76]
- 13906 0V **Wavefront-based optical alignment of telescope using an autoencoder-FCNN model**
[13906-78]
- 13906 0W **Tilt-packet modeling of atmospheric turbulence and Fourier-domain stacking for ground-based imaging** [13906-79]
- 13906 0X **Rethinking fall detection for edge AI: tradeoffs between CNN and transformer design**
[13906-80]
- 13906 0Y **Random deep photonic processor for high-throughput optical inference with cascaded MZI arrays** [13906-82]
- 13906 0Z **Small-scale semiconductor laser networks with GHz-bandwidth for photonic reservoir computing** [13906-83]
