

PROCEEDINGS OF SPIE

Complex Light and Optical Forces XX

David L. Andrews
Enrique J. Galvez
Halina Rubinsztein-Dunlop
Editors

19–22 January 2026
San Francisco, California, United States

Sponsored and Published by
SPIE

Volume 13921

Proceedings of SPIE 0277-786X, V. 13921

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Complex Light and Optical Forces XX*, edited by David L. Andrews, Enrique J. Galvez, Halina Rubinsztein-Dunlop, Proc. of SPIE 13921, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

SKYRMIONS

13921 02 **Creation of multicolored skyrmions as entangled and single photon states** [13921-8]

ENTANGLEMENT WITH STRUCTURED LIGHT

13921 03 **Towards sources of entangled transverse-mode-encoded qudits on-chip** [13921-25]

LIGHT INTERACTIONS

13921 04 **Topological protection through randomness** [13921-28]

13921 05 **Classical ghost imaging with nondiffracting, self-healing light structures in simulated atmospheric turbulence** [13921-29]

COMMUNICATIONS

13921 06 **Fast and efficient OAM mode detection for optical communications via rotating Poincaré beams (Invited Paper)** [13921-31]

STRUCTURED LIGHT IN FIBERS

13921 07 **Single-fibre endoscopy based on holographic beam projection and photon-counting detection (Invited Paper)** [13921-32]

ANGULAR MOMENTUM OF LIGHT AND PHOTONIC MATERIALS

- 13921 08 **The use of additive and subtractive manufacturing on photonic crystal surface emitting laser to encode orbital angular momentum states for quantum communications** [13921-36]

POSTER SESSION

- 13921 09 **Controlling randomness: experimentally simulated scattering with digital holograms** [13921-40]
