SPIE

Volume 14016

Proceedings of SPIE 0277-786X, V. 14016

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *SPIE Advanced Biophotonics Conference (SPIE ABC 2025)*, edited by Ki-Hun Jeong, Hongki Yoo, Seung Ah Lee, Eun-Yeong Park, Proc. of SPIE 14016, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

YIA1

- 14016 02 **Development of an index-matching epoxy-based collimator for reducing multipath artifacts in multimodal intravascular optical coherence tomography** [14016-11]
- 14016 03 **Mini review on fast multiple-scattering solvers for holotomography: the pupil phase series** [14016-17]
- 14016 04 **Intracellular refractive index imaging via plasmonic metasurfaces** [14016-10]
- 14016 05 **Correlative expansion imaging-guided deep learning to enable high-throughput in vivo super-resolution microscopy** [14016-18]
- 14016 06 **Enhanced 3D multiparametric photoacoustic computed tomography via hybrid diffusion model** [14016-15]
- 14016 07 **High-speed virtual re-staining via near-infrared quantitative phase imaging** [14016-13]

YIA2

- 14016 08 **Label-free morpho-molecular live-cell phenotyping propels biological discovery** [14016-6]
- 14016 09 **Polarization maintaining fiber with simple optical configuration for polarization-insensitive optical coherence tomography** [14016-14]
- 14016 0A **Chromatic optical coherence tomography for clear and deep-tissue imaging** [14016-7]
- 14016 0B **Event-based imaging of neuronal and vascular dynamics in vivo** [14016-16]
- 14016 0C **Adaptive optics based on neural wavefront shaping for two-photon microscopy** [14016-5]
- 14016 0D **Mitigating forward model mismatch in inverse problems via learned residuals and diffusion priors** [14016-3]
- 14016 0E **Plasmonic metasurfaces with scalable quasi-orders for optical security** [14016-2]

14016 OF **An investigation of high refractive index silicone as a light guiding material for optogenetic applications** [14016-4]
