Volume 13926

Proceedings of SPIE, 1605-7422, V. 13926

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Medical Imaging 2026: Computer-Aided Diagnosis*, edited by Axel Wismüller, Thomas M. Deserno, Proc. of SPIE 13926, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

xi *Conference Committee*

ALZHEIMER'S DISEASE

- 13926 02 **MAVeRiC-AD: mixture-of-experts agentic vision-language ensemble for robust MRI classification of Alzheimer's disease** [13926-1]
- 13926 03 **Explainable harmonized cortical graph neural networks for risk prediction of Alzheimer's disease** [13926-3]
- 13926 04 **Predicting Alzheimer's disease progression using rs-fMRI and a history-aware graph neural network** [13926-4]

LANGUAGE MODELS

- 13926 05 **Finetuning medical vision-language models for interpretable and fine-grained disease classification** [13926-5]
- 13926 06 **An investigation of segmentation-pretrained and image-text pretrained models for medical VQA** [13926-6]
- 13926 07 **Pathologist-interpretable prediction of low grade glioma and glioblastoma from whole slide images** [13926-7]
- 13926 08 **MammoVQA: a reinforcement learning framework for clinically aligned mammographic question answering** [13926-8]

LUNG CANCER

- 13926 09 **Applying deep learning and radiomics to diagnostically challenging nodules in LDCT screening programs** [13926-9]
- 13926 0A **MEDPSeg: an offline pulmonary segmentation and quantification tool for ground-glass opacities, consolidation, and other pulmonary structures on computed tomography** [13926-10]
- 13926 0B **CT-RetrieVR: fine-grained retrieval-based report generation for 3D CT imaging** [13926-11]

- 13926 0C **Noise injection: improving out-of-distribution generalization for limited size datasets** [13926-12]
- 13926 0D **Minimal input, maximal impact: a CT-only semi-supervised learning pipeline for lung cancer survival prediction across 12 datasets** [13926-13]

FEATURE EXTRACTION

- 13926 0F **Image class translation distance: a novel interpretable feature for image classification** [13926-14]
- 13926 0G **Radiological and biological dictionary of radiomics features: addressing understandable AI issues in personalized lung cancer; dictionary version LC1.0** [13926-15]
- 13926 0H **Contrastive learning for robust deep radiomics** [13926-16]
- 13926 0I **Identifying important clinical features for post-cardiac arrest neurological prognostication using clinical BERT** [13926-17]
- 13926 0J **Ensembled composite spatial, radiomics, and dosimetric features for early onset prediction of complications in head and neck radiotherapy treatments** [13926-18]
- 13926 0K **Delta radiomics from multiparametric MRI predicts survival and treatment response in post-treatment glioma patients** [13926-44]

CLASSIFICATION

- 13926 0L **A PCA-based TDA approach for computed tomography** [13926-19]
- 13926 0M **Towards resolution-independent retinal image classification using implicit neural representations** [13926-20]
- 13926 0N **Enhancing thyroid scintigraphy classification with diffusion-based augmentation** [13926-21]
- 13926 0O **Improving machine-learning-based multiclass pediatric low-grade glioma molecular subtype identification using large language models** [13926-22]

PREDICTING BREAST CANCER

- 13926 0P **Breast density classification and decision explainability by deep sparse approximations** [13926-23]
- 13926 0Q **Explainable and fair federated learning with XGBoost for predicting pathological complete response in breast cancer using multicenter DCE-MRI data** [13926-24]

- 13926 OR **Early prediction of breast cancer response to neoadjuvant chemotherapy using multitimepoint and multiregion MRI with graph convolutional network** [13926-25]
- 13926 OS **Large language models and domain knowledge for enhanced multimodal learning in predicting breast cancer recurrence risk** [13926-26]
- 13926 OT **Predicting pathological complete response in breast cancer using a dual 3D ResNet-transformer architecture with multimodal data fusion** [13926-27]

TRANSFORMER MODELS

- 13926 OU **CEST MRI Z-spectra reconstruction using transformer-based deep learning models and undersampled spectrum signatures** [13926-28]
- 13926 OV **Latent diffusion transformers for 3D head and neck tumor segmentation** [13926-31]
- 13926 OW **Random forest-based out-of-distribution detection for robust lung cancer segmentation** [13926-32]

SEGMENTATION

- 13926 OX **Edge-preserving frequency-enhancement attention module for polyp segmentation in endoscopic imaging** [13926-33]
- 13926 OZ **Impact of color tint maps on regions of interest for segmentation in ultrasound images** [13926-35]

ABDOMEN IMAGING

- 13926 11 **Anatomy-aware diffusion-based detection of bowel inflamed lesions in MRE with foundation model-based zero-shot bowel segmentation** [13926-37]
- 13926 12 **Parameter-efficient fine-tuning of foundation models for liver tumor segmentation in CT** [13926-38]
- 13926 13 **Prostate cancer aggressiveness prediction via diffusion autoencoder-based self-supervised representation learning from multiparametric MRI** [13926-39]
- 13926 14 **Automated anatomical labeling of abdominal arteries via subgraph classification from contrast-enhanced CT scans** [13926-40]
- 13926 15 **Primary modality-focused hierarchical fusion for prediction of prostate cancer aggressiveness in bi-parametric MR images** [13926-41]

MRI

- 13926 16 **Anomaly detection in brain MRI: a neural discrete representation learning with contrastive loss** [13926-42]
- 13926 17 **Assessing generalizability and uncertainty in deep learning-based brain MR image reconstruction from healthy to pathological data** [13926-43]
- 13926 18 **Uncertainty-aware fusion of foundation and task-specific models for cardiac MRI segmentation** [13926-45]
- 13926 19 **Analysis of off-label artificial intelligence of ultrafast DCE-MRI for classification of breast lesions: implications for software as a medical device** [13926-46]

GENERATIVE AI

- 13926 1A **Efficient CBCT quality improvement for quantitative image analysis in radiotherapy using conditional flow matching models** [13926-47]
- 13926 1C **Evaluating the clinical plausibility of generative AI-synthesized imaging: a radiologist reader study** [13926-50]
- 13926 1D **Contrastive-inspired feature optimization in generative diffusion augmented learning for lesion detection in digital breast tomosynthesis** [13926-98]

PERCEPTION MEETS CAD: JOINT SESSION WITH CONFERENCES 13926 AND 13928

- 13926 1E **Extending image quality assessment system on top of pretrained CADe backbone for Barrett's esophagus** [13926-51]

POSTER SESSION

- 13926 1G **Decoupled adversarial diffusion for MRI-to-CT translation** [13926-49]
- 13926 1H **Adaptive differential privacy for federated medical segmentation across modalities and complexity levels** [13926-53]
- 13926 1I **Large vision models for advanced endoscopic data analysis** [13926-54]
- 13926 1J **Caption-based Alzheimer's and mild cognitive impairment diagnosis at baseline using hybrid and transformer-based models** [13926-55]
- 13926 1K **Adaptive stochastic fracture propagation for fracture detection development** [13926-56]

- 13926 1L **Enhanced lung cancer detection via a multimodal model: a segmentation-based approach** [13926-57]
- 13926 1M **Statistical process control for medical dataset cleaning** [13926-58]
- 13926 1N **Severity-aware multimodal network for chest x-ray triage and disease captioning** [13926-59]
- 13926 1O **Joint training to improve report generation capability from longitudinal CT volumes with a vision-language model** [13926-60]
- 13926 1P **Radiomics for predicting histological subtypes of pleural mesothelioma on CT scans with and without necrosis** [13926-61]
- 13926 1Q **Automatic estimation of mediastinal lymph node map from CT volumes** [13926-62]
- 13926 1R **Improving pediatric low-grade glioma molecular subtype identification using a novel AUROC loss function for convolutional neural networks** [13926-63]
- 13926 1S **Comparative evaluation of machine learning and large language model pipelines for identifying acute ischemic stroke in radiology reports** [13926-64]
- 13926 1T **CrossModalVit: cross-attention vision transformer for multimodal MRI fusion in MGMT promoter methylation prediction** [13926-65]
- 13926 1U **DuCTSNet: MA-SAM based fully automated DCIS segmentation and radiomic phenotyping for patient risk stratification in the ECOG-ACRIN E4112 trial** [13926-66]
- 13926 1V **Lesion segmentation and CT biomarkers definition for tuberculosis assessment and follow-up** [13926-68]
- 13926 1W **A synthetic data-based evaluation framework for global and voxelwise biological brain age prediction methods** [13926-69]
- 13926 1X **Toward using machine learning as a shape quality metric for liver point cloud generation** [13926-70]
- 13926 1Y **Optimized feature selection of nodular and peri-nodular radiomics for lung cancer risk prediction with ensemble artificial neural networks** [13926-71]
- 13926 1Z **Efficient skeletal muscle segmentation in body CT images via unilateral training based on anatomical symmetry** [13926-72]
- 13926 2I **Integrating 2D dermatological photography with 3D anatomical surfaces** [13926-74]
- 13926 2J **Anatomical context vs. precise segmentation: a comparative 3D CNN framework for primary liver tumor classification on MRI** [13926-75]
- 13926 2K **ICU mortality prediction using fine-tuned large language models on structured clinical data** [13926-77]

- 13926 25 **Multiscale graph attention network for topology-aware airway segmentation in lung CT** [13926-78]
- 13926 26 **Robust multiparametric model selection for semi-supervised event-free survival prediction in lung cancer using PET/CT radiomics** [13926-79]
- 13926 27 **Exploiting multiple contrast-enhanced CT data in computer-aided kidney mass classification** [13926-80]
- 13926 28 **Evaluating reliability of AI uncertainty estimations** [13926-81]
- 13926 29 **Explainable deep learning for myocardial perfusion imaging with a Grad-CAM-based loss function** [13926-82]
- 13926 2A **Text-embedded Swin-UMamba for DeepLesion segmentation** [13926-83]
- 13926 2B **Segmentation of breast implants in MRI** [13926-84]
- 13926 2C **Anatomy orientation-guided auto-segmentation of bones from hip 3T magnetic resonance imaging** [13926-85]
- 13926 2D **Patient-level evaluation of deep learning models for pre-operative diagnosis of adnexal masses on ultrasound imaging** [13926-86]
- 13926 2E **DECODE-PD: deep explainable composite imaging fusion of MRI, PET, and SPECT for early detection of Parkinson's disease** [13926-87]
- 13926 2F **Validation of fully-automated deep learning-based fibroglandular tissue segmentation for efficient and reliable quantitation of background parenchymal enhancement in breast MRI** [13926-88]
- 13926 2G **Integrating retinal fundus imaging and computable phenotypes for subphenotype discovery and LLM-assisted early and late-onset Alzheimer's diagnosis** [13926-89]
- 13926 2H **EndoMAE: a foundation model for endoscopic image analysis via self-supervised learning** [13926-90]
- 13926 2I **Automated estimation of anatomical risk metrics for endoscopic sinus surgery using deep learning** [13926-91]
- 13926 2J **Hybrid-intelligence framework for pathological liver segmentation and disease localization in CT imaging** [13926-92]
- 13926 2K **Integrated system for characterization of malignant and benign adrenal lesions and differentiation of high- and low-risk adrenal cancer on CT scans using radiomics-based decision support** [13926-93]
- 13926 2L **A novel AI approach for characterizing sporadic colonic hamartomas using NBI** [13926-94]

- 13926 2M **Cohort-aware agents for individualized lung cancer risk prediction using a retrieval-augmented model selection framework** [13926-95]
- 13926 2N **HepaTrack: spatiotemporal deep learning for ultrasound-based prediction of malignant transformation in liver nodules** [13926-96]
- 13926 2O **Deep learning-based regional white matter hyperintensity mapping as a robust biomarker for Alzheimer's disease** [13926-97]
- 13926 2P **MRI embeddings complement clinical predictors for cognitive decline modeling in Alzheimer's disease cohorts** [13926-99]
- 13926 2Q **Cardiac substructure segmentation via a pretrained large CNN with multistage learning** [13926-100]
- 13926 2R **Automated bone shape-guided ultrasound dataset generation for femur segmentation using conditional GANs** [13926-101]
- 13926 2S **Comparative analysis of deep learning models and transformers for diagnosis of multiple sclerosis using MRI** [13926-102]
- 13926 2T **Classification of invasive and non-invasive breast carcinomas with multiscale cross-modal attention modules** [13926-103]
- 13926 2U **AI explaining decision reasons in domain language of radiologists in liver cancer diagnosis in MRI** [13926-104]
- 13926 2V **A scale-controlled super-resolution study with YOLOv11 on VinDr-Mammo** [13926-105]
- 13926 2W **Predicting MGMT and IDH1 status in gliomas using radiomic features** [13926-106]
- 13926 2X **Investigating underlying mechanism of obesity through brain structure and delay discounting: a graphical modeling approach** [13926-107]
- 13926 2Z **BreastMR-FM v1.0: a foundational DCE-MRI model for breast tumor characterization and outcome prediction** [13926-109]
- 13926 31 **Leveraging a foundation model for efficient mediastinal lymph node segmentation from CT volumes** [13926-111]
- 13926 33 **Evaluating natural and domain-specific pretraining for variational autoencoder reconstruction of lung nodules** [13926-113]

DIGITAL POSTER SESSION

- 13926 34 **Multimodal multilevel neuroimaging fusion with modality-aware mask-guided attention and deep canonical correlation analysis to improve dementia risk prediction [13926-2]**
- 13926 35 **G2L-Mamba: global to local state-space networks for male pelvic multiorgan segmentation on T2w MRI [13926-29]**
- 13926 36 **Detecting pediatric supraventricular tachycardia from baseline ECGs using hybrid ensemble learning [13926-30]**
