**Volume 13928**

Proceedings of SPIE, 1605-7422, V. 13928

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Medical Imaging 2026: Image Perception, Observer Performance, and Technology Assessment*, edited by Mark A. Anastasio, Jovan G. Brankov, Proc. of SPIE 13928, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

ISSN: 1605-7422

ISSN: 2410-9045 (electronic)

ISBN: 9781510697935

ISBN: 9781510697942 (electronic)

---

**Paper Numbering:** A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

vii *Conference Committee*

---

## TASK-INFORMED RECONSTRUCTION AND DENOISING

- 13928 02 **A procedure for identifying task-relevant null space hallucinations in reconstructed images** [13928-1]
- 13928 03 **Evaluation of perfusion defect detectability in low-dose cardiac SPECT upon edge-preserving deep learning denoising** [13928-2]
- 13928 04 **Medical image denoising with task-based image-adaptive denoising CNN** [13928-3]
- 13928 05 **Enhancing signal detectability in plug-and-play CT reconstruction** [13928-4]
- 13928 06 **Exploring the limits of deep-learning-based PET image denoising for lesion detectability** [13928-5]

---

## AI INTEGRATION INTO CLINICAL IMAGING WORKFLOWS

- 13928 07 **Generalized statistical testing of interchangeability in performance between an AI segmentation device and a multi-expert human panel without requiring a reference standard (Invited Paper)** [13928-6]
- 13928 08 **AI-driven multi-lesion detection in whole-body FDG PET/CT** [13928-7]
- 13928 09 **Benchmarking GPT-5 for zero-shot multimodal medical reasoning in radiology and radiation oncology** [13928-8]
- 13928 0A **Deep learning model for Cherenkov image de-identification in radiotherapy delivery verification** [13928-9]
- 13928 0B **Composite CT scoring system for diffuse idiopathic skeletal hyperostosis (DISH): a validated and reproducible framework for diagnosis and severity assessment (Robert F. Wagner All-Conference Best Student Paper Award - Runner-Up)** [13928-10]

---

## ADVANCES IN MODEL OBSERVERS

- 13928 0C **Anthropomorphic deep learning model observers compared to linear model observers for localization** [13928-11]

- 13928 OD **Adaptive learning approach for anthropomorphic model observers based on domain-aware CNNs** [13928-12]
- 13928 OE **A nonlinear channelized model observer using Box-Cox transformation** [13928-13]
- 13928 OF **Modeling human observer performance with neural network observers in a forced localization task using undersampled MRI images** [13928-14]
- 13928 OG **A new method for approximating the ideal observer based on the variational information bottleneck principle** [13928-15]

---

#### WEDNESDAY MORNING KEYNOTES

---

- 13928 OH **Human perception as an inverse problem with applications to medical imaging (Keynote Paper)** [13928-505]

---

#### HUMAN PERCEPTION IN DIAGNOSTIC IMAGING

---

- 13928 OI **Using normal medical images as disparity probes: application with chest radiographs** [13928-16]
- 13928 OJ **Characteristics of trainee interpretation time during simulated screening mammography** [13928-17]
- 13928 OK **Agreement between readers making mammographic percentage density assessments using visual analogue scales in a multivendor test set** [13928-18]
- 13928 OL **Comparing the subsequent search miss effect between mammography and tomosynthesis** [13928-19]
- 13928 OM **Trade-off between radiation dose and low-contrast detectability in CT: the role of display window settings optimization** [13928-20]

---

#### ADVANCES IN QUANTITATIVE EVALUATION

---

- 13928 ON **A framework for ROC analysis of rule-out and rule-in diagnostics and an application to mammography data** [13928-21]
- 13928 OO **Comparing evaluation of quantitative imaging methods using reference standards versus regression-without-truth-based technique** [13928-22]
- 13928 OP **Extending regression without truth to integrate ground-truth measurements for evaluating quantitative imaging methods with patient data (Robert F. Wagner All-Conference Best Student Paper Award - Finalist)** [13928-23]

- 13928 OQ **Uncertainty quantification for synthetic medical images** [13928-24]
- 13928 OR **An input-dependent Fisher-information-guided image decomposition for interpreting classification networks** [13928-25]

---

#### ASSESSMENT OF BREAST IMAGING TECHNOLOGIES

---

- 13928 OS **The impact of common image quality issues in screening mammograms on commercial AI-CAD models** [13928-26]
- 13928 OT **A comparison of contrast-enhanced mammography (CEM) versus digital breast tomosynthesis (DBT): diagnostic accuracy and reader performance** [13928-27]
- 13928 OU **Radiologist-vision-language model collaboration for breast cancer diagnosis in mammography** [13928-28]
- 13928 OV **Automation bias and timing of artificial intelligence decision support in screening mammography** [13928-29]
- 13928 OW **The largest validation of the Mirai model for 5-year breast cancer risk prediction in Mexican women** [13928-30]

---

#### ASSESSMENT OF EMERGING TECHNOLOGIES

---

- 13928 OX **Mitigating domain shift in concept bottleneck models for diabetic retinopathy grading via learnable concept projection** [13928-31]
- 13928 OY **MedFoundationHub: a lightweight and secure toolkit for deploying medical vision language foundation models** [13928-32]
- 13928 IO **The MIDRC SeqreT datasets: multi-institutional imaging resources for independent algorithm evaluation** [13928-34]

---

#### VISUAL SEARCH ANALYSIS AND MODELING

---

- 13928 I2 **Visual search behaviour of readers interpreting mammograms with known different difficulty for humans and AI (Invited Paper)** [13928-36]
- 13928 I3 **TopoGaze: topological analysis of radiologist gaze patterns for thoracic disease classification** [13928-37]
- 13928 I4 **Visual search patterns in 3D pancreatic imaging: an eye tracking study** [13928-38]
- 13928 I5 **A contactless gaze-to-reaction-time pipeline for screening-oriented visual field assessment** [13928-39]

---

**PERCEPTION MEETS CAD: JOINT SESSION WITH CONFERENCES 13926 AND 13928**

---

- 13928 17 **Can automation bias exert a positive bias when radiologists read screening mammography concurrently with artificial intelligence?** [13928-41]
- 13928 18 **Impact of a computer-aided detection tool on risk prediction models for interval cancers in mammography screening** [13928-42]

---

**POSTER SESSION**

---

- 13928 19 **Quantitative evaluation of saliency-based explainability for breast cancer detection using digital breast tomosynthesis (Image Perception and Technology Assessment Cum Laude Poster Award)** [13928-43]
- 13928 1A **Colony grounded SAM2: zero-shot detection and segmentation of bacterial colonies using foundation models** [13928-44]
- 13928 1B **Unsupervised CBCT metal artifact reduction via prior-aware polychromatic implicit neural representations** [13928-45]
- 13928 1C **Diffusion models with awareness of binary signal detection tasks for medical image denoising** [13928-46]
- 13928 1D **Objective image quality quantification: an automated robust noise evaluation method for anatomical CT images** [13928-47]
- 13928 1E **Crossing the AI innovation-to-application chasm through implementation science: using concept mapping in the knowledge-to-action process to identify and overcome barriers to routine use of effective AI in medical imaging** [13928-48]
- 13928 1F **Fine annotation loss and top-k analysis in interpretable models for breast cancer prediction** [13928-49]
- 13928 1G **Under-sampling pattern optimization for task-informed image reconstruction in MRI (Image Perception and Technology Assessment Honorable Mention Poster Award)** [13928-50]
- 13928 1H **Automated highly efficient and rapidly implementable clinical data extraction from medical ultrasound images: a vendor-agnostic deep learning pipeline** [13928-51]
- 13928 1I **Clustering of texture concepts in CNN feature space for improved explainability in glioma biomarker prediction from post-contrast T1-weighted MRI** [13928-52]
- 13928 1J **Toward context aware skin cancer analysis: learning age, sex, site, and class from ISIC dermoscopic images** [13928-53]
