SPIE

Volume 13945

Proceedings of SPIE 0277-786X, V. 13945

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Electroactive Polymer Actuators, Sensors, and Devices (EAPAD) 2026*, edited by Kentaro Takagi, John D. Madden, Cédric Plesse, Stefan S. Seelecke, Anne L. Skov, Proc. of SPIE 13945, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii *Conference Committee*

ELECTROSTATIC AND DIELECTRIC FLUID ACTUATORS

- 13945 02 **Cuttlefish swimming gait using electrohydraulic actuators** [13945-3]
- 13945 03 **Model-based position control of dielectric fluid actuators via high-frequency modulation**
[13945-4]

DIELECTRIC FLUIDS, GELS, AND ELASTOMERS

- 13945 04 **Electromechanical analysis of a stacked polyvinyl chloride (PVC) gel actuators and the improvement in their performances with the additions of ionic liquids (Keynote Paper)**
[13945-5]
- 13945 05 **Combination of dielectric elastomer membrane actuators with dielectric elastomer switches to create an autonomous elastomer-based platform** [13945-7]
- 13945 06 **Fiber-reinforced dielectric elastomers with a tailored fiber placement-manufactured continuous reinforcement layer** [13945-8]

DIELECTRIC ELASTOMERS I

- 13945 07 **From first cycle to fatigue: in-situ damage evolution and lifetime of dielectric elastomer actuators with continuous carbon fiber reinforcement** [13945-10]
- 13945 08 **Subtractive patterning for high-resolution electrodes in dielectric elastomer actuators**
[13945-13]
- 13945 09 **Dielectric elastomer transducers beyond audible frequencies: first experimental insights and design considerations** [13945-14]
- 13945 0A **Downscaling of multidimensional cooperative arrays of dielectric elastomer actuators**
[13945-15]

THERMO-MECHANICALLY ACTIVE POLYMERS AND TWISTED AND COILED ACTUATORS

- 13945 0B **Electrothermal polymer actuators driven by entropic elasticity near room temperature (Keynote Paper)** [13945-16]

13945 0C **Experimental characterization of the self-sensing property in compliant coiled string actuators** [13945-19]

SOFT ROBOTICS: JOINT SESSION WITH CONFERENCES 13944 AND 13945

13945 0D **Electroactive polymers (EAPs) and AI-ML: sensing touch and powering the humanoid push** [13945-35]

DIELECTRIC ELASTOMERS II

13945 0E **Dielectric-elastomer-switch-inspired devices for autonomous soft robotics** [13945-28]

13945 0G **Enhancing self-sensing in dielectric elastomers through random forest regression** [13945-30]

13945 0H **Integrated capacitive sensing for a soft robot joint based on dielectric elastomer transducers** [13945-31]

13945 0I **Ageing effect in carbon-black-based stretchable electrodes** [13945-53]

CONDUCTIVE AND IONIC POLYMERS

13945 0J **Solid state conducting polymer coated coiled yarn actuators for wearables** [13945-24]

13945 0K **A dimensionless parameter for characterizing and predicting the relaxation behavior of IPMC sensor voltage** [13945-27]

POLYMER SENSORS AND ELECTROSTRICTIVE POLYMER ACTUATORS

13945 0L **Embedded dielectric elastomer force sensors in wearable gloves for enhanced operator feedback in assembly tasks** [13945-32]

13945 0M **Electrostrictive actuation of endoscopes for mini-invasive surgery** [13945-36]

13945 0N **Development of EAP-based actuators for high-frequency adaptive optics system** [13945-37]

POSTER SESSION

13945 0P **Influence of precursor fiber processing parameters on the performance of thermally activated twisted and coiled polymer actuators** [13945-40]

13945 0Q **Hot-cold water-driven control of twisted and coiled polymer artificial muscles embedded in tubes** [13945-42]

- 13945 OR **Formation of a wrinkle structure using twisted and coiled polymer actuators for a variable friction mechanism** [13945-44]
- 13945 OS **Dielectric elastomers as active materials for next-generation high-voltage switches** [13945-48]
- 13945 OT **Mechanical metamaterial-reinforced dielectric elastomer actuators** [13945-49]
- 13945 OU **On the anisotropic swelling characteristics of Nafion membranes** [13945-50]
- 13945 OV **Segmented ionic polymer metal composite for dust wiper applications** [13945-52]
- 13945 OW **Printing and performance evaluation of multilayer electrostrictive soft actuators** [13945-54]
