Volume 14082

Proceedings of SPIE 0277-786X, V. 14082

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *3D Printed Optics and Additive Photonic Manufacturing V*, edited by Alois M. Herkommer, Georg von Freymann, Manuel Flury, Proc. of SPIE 14082, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii *Conference Committee*

APPLICATIONS I

- 14082 02 **Design and fabrication of a 3D-printed micro-optical fringe projection system** [14082-4]
- 14082 03 **Learning to explain: translating dermatological XAI insights to industrial photonics**
[14082-62]

3D PRINTING II

- 14082 04 **Design of a 5D direct laser writing system for fabrication of stimuli-responsive materials with adjustable actuation properties** [14082-16]

APPLICATIONS II

- 14082 05 **Optimizing phase modulators within fabrication constraints of resin 3D printing** [14082-8]

TWO-PHOTON LITHOGRAPHY I

- 14082 06 **Compact 3D-printed dark-field condenser for high-resolution optical microscopy**
[14082-19]
- 14082 07 **High-fidelity transfer of 3D-printed freeform micro-optics into scalable polymer replication**
[14082-20]
- 14082 08 **Low-loss 3D microstructured optical waveguides fabricated by two-photon polymerization**
[14082-22]

TWO-PHOTON LITHOGRAPHY II

- 14082 09 **Simultaneous dual-plane multi-write-spot two-photon polymerization using a single diffractive optical element (Invited Paper)** [14082-23]
- 14082 0A **Diffractive optical elements fabricated by monolithic mode-locked diode laser-based two-photon polymerization** [14082-24]

- 14082 0B **Two-photon polymerized nanostructures as high-sensitivity homogeneous and reproducible SERS substrates** [14082-25]
- 14082 0C **On-fiber diffractive beam splitter for multicore fiber interfacing fabricated by two-photon polymerization** [14082-26]

ADDITIVE MANUFACTURING

- 14082 0D **Additive manufactured fused silica microlens array for photoacoustic applications** [14082-29]
- 14082 0E **Etch-free fabrication of strip-loaded thin-film lithium niobate integrated photonic components** [14082-30]
- 14082 0F **Additive manufacturing of fiber-tip microlenses and layered microstructures using UV-curable photopolymer** [14082-31]
- 14082 0G **First steps towards machine learning for prediction and pre-correction in direct laser writing (SPIE Best Student Paper Award)** [14082-32]

VOLUMETRIC PRINTING I

- 14082 0H **Exploring new etendue configurations for next-generation blurred tomography and the volumetric fabrication of micro-optical components (Invited Paper)** [14082-34]
- 14082 0I **High-performance coupled opto-chemical simulation of gradient-index light transport in vat photopolymerization** [14082-35]

VOLUMETRIC PRINTING II

- 14082 0J **Fluorescence profilometry for accurate volumetric additive manufacturing overprinting** [14082-42]

POSTERS-TUESDAY

- 14082 0K **3D printing of micron-scale tapered optical fibers made from bio-based organic materials: multiple physical and optical characterizations, towards a new form of integrated photonic** [14082-44]
- 14082 0L **Nonlinear optical characterization and two-photon polymerization performance of titanocene for high-resolution 3D microfabrication** [14082-45]

- 14082 0M **Two-photon polymerization of diffractive elements for core-selective coupling in multicore fibers** [14082-48]
- 14082 0N **Single-shot volumetric additive manufacturing via computer-generated holography** [14082-55]
- 14082 0O **Additive manufacturing of doped high-resolution glass optical components for quantum sensing devices** [14082-61]
