Volume 14087

Proceedings of SPIE 0277-786X, V. 14087

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Real-time Processing of Image, Depth, and Video Information 2026*, edited by Gian Domenico Licciardo, Viktor J. Schneider, Matthias F. Carlsohn, Proc. of SPIE 14087, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v	Conference Committee
vii	Introduction

AUTOMATED VISUAL INSPECTION AND MONITORING SYSTEMS

14087 02	Deep learning-based welding quality inspection from video streams using YOLOv11 [14087-1]
14087 03	Real-time image classifications of lemons in food industries [14087-2]
14087 04	A YOLOv12-ByteTrack framework for automated fish species labeling in coral reef environments [14087-3]
14087 05	Optical flow and synthetic depth augmentation for face presentation attack detection [14087-4]

RESOURCE-EFFICIENT AI AND EMBEDDED VISION SYSTEMS

14087 06	Path following of tracked vehicles using LSTM-based model predictive control [14087-6]
14087 07	Real-time image segmentation for kidney stone identification using light-weight AI models [14087-18]
14087 08	AI-based lightweight system for indoor pollution estimation [14087-9]

EMERGING HARDWARE ARCHITECTURES FOR NEURAL NETWORKS

14087 09	Compact digital-to-time and time-to-digital converters for in-memory computing circuits toward real-time edge GenAI [14087-12]
14087 0A	One-pass noise-aware training for higher accuracy free-space optical convolution neural network [14087-14]
14087 0B	Real-time vehicle trajectory prediction on an embedded GPU architecture [14087-10]

JOINT SESSION: MEDICAL IMAGE PROCESSING

- 14087 0C **Improving endoscopy by passing from complex video-sequences to 2D and 3D mosaics (Keynote Paper)** [14087-15]
- 14087 0D **Enforcing cross-view depth scale consistency for 3DGS-based reconstruction in endoscopy** [14087-16]

POSTER SESSION

- 14087 0E **Automatic generation of annotated IR image datasets using embedded real-time vision** [14087-17]
