Volume 14091

Proceedings of SPIE 0277-786X, V. 14091

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Fiber Lasers and Glass Photonics: Materials through Applications V*, edited by Stefano Taccheo, Maria Rita Cicconi, Matthias L. Jäger, Proc. of SPIE 14091, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii *Conference Committee*

NOVEL MATERIALS AND COMPONENTS I

- 14091 02 **Enhanced upconversion luminescence in Er^{3+} - Yb^{3+} codoped LaF_3 glass-ceramic optical fibers** [14091-2]
- 14091 03 **Dual-polarized laser emission from a $\text{Yb}:\text{LiYF}_4$ crystal cut along the optical axis** [14091-3]
- 14091 04 **Broadband near-infrared luminescence in glasses doped with PbS quantum dots and rare-earth ions for optical fiber applications** [14091-4]
- 14091 05 **Silicate glass and glass-ceramics for applications in scintillators: towards near-infrared region (Invited Paper)** [14091-1]

NOVEL MATERIALS AND COMPONENTS II

- 14091 08 **Limitations of the alumino-phospho-silica glasses for $2\mu\text{m}$ fiber lasers** [14091-8]
- 14091 0A **Processing and optical degradation assessment of Eu^{3+} -doped 13-93 bioactive glass fibers** [14091-10]
- 14091 0B **Advances of fluorescence measurements and photodarkening studies of dysprosium-doped silica fibers for efficient yellow emission** [14091-11]

NOVEL MATERIALS AND COMPONENTS III

- 14091 0C **Femtosecond-laser waveguide inscription in fluoride glasses (Invited Paper)** [14091-16]
- 14091 0E **Femtosecond-laser-written waveguides in Pr^{3+} -doped sulfide glass: μ -spectroscopy and birefringence analysis** [14091-14]

NOVEL MATERIALS AND COMPONENTS IV

- 14091 0G **Judd-Ofelt analysis and emission spectroscopy of Dy^{3+} -doped InF_3 -based glass for visible fiber lasers** [14091-17]
- 14091 0H **The influence of Pt ions on the optical and morphological properties of NaYF_4** [14091-18]

- 14091 OJ **Impact of argon sputtering pressure on mid-infrared emission from Dy³⁺-doped Ga-Ge-Sb-Se waveguides** [14091-20]
- 14091 OK **Flexible ZnO-PDMS microneedle waveguides for localized red-light delivery in photomedical applications** [14091-21]

NOVEL LASERS AND LUMINESCENCE MATERIALS I

- 14091 OO **From crystal to microsphere: pressureless amorphization of Dy³⁺-doped tungstate revealed by μ -spectroscopy** [14091-26]

TWO MICRON SOURCES

- 14091 OR **Numerical analysis of an optical fiber with a structural multiring invert gradient refractive index profile for applications in flat-top lasers operating in the 1.8–2.0 μ m range** [14091-29]
- 14091 OT **All-fiber picosecond 1950nm/35W MOPA system with Tm-doped spun tapered double-clad fiber** [14091-31]
- 14091 OU **1.9 μ m ring fiber laser mode-locked with nonlinear polarization evolution** [14091-32]

SPECIAL SESSION: EARLY CAREER RESEARCHERS

- 14091 OV **Improvement of effective conductivity in solid state laser medium through transparent heat sink face bonding** [14091-34]
- 14091 OW **Combining optical topologies for ultrarobust high dimensional states of light in optical fibre** [14091-35]
- 14091 OX **Integrated fiber-optic microlenses for enhanced femtosecond SHG in PPLN crystals** [14091-36]
- 14091 OY **Microstructure, light scattering, and mid-infrared emission of Er:CaF₂ transparent ceramics** [14091-37]

VIS

- 14091 IO **Multimode diode-pumped yellow Dy:ZBLAN fiber laser** [14091-39]
- 14091 II **A new look at a dye-based solid-state random laser: a simple photon model** [14091-40]
- 14091 IJ **All-glass double-clad diode-pumped Pr:ZBLAN red fiber laser (Invited Paper)** [14091-41]

HIGH-POWER SOURCES AND COMPONENTS

- 14091 14 **Pump-signal combiner for high-power fiber lasers at 2 μ m wavelength** [14091-43]
- 14091 15 **Simultaneous suppression of TMI and SBS in polarization maintaining fiber amplifiers (SPIE Best Student Paper Award)** [14091-44]

NOVEL LASERS AND LUMINESCENCE MATERIALS II

- 14091 18 **Advances of powder sintering technology for high power amplifiers (Invited Paper)** [14091-47]
- 14091 19 **Er/Yb-activated barium gallo-germanate glass thin films deposited by RF magnetron co-sputtering for near- and mid-infrared photonic structures** [14091-48]
- 14091 1A **Fabrication and emission properties of infrared-transparent erbium-doped lanthanum oxysulfide (Er:La₂O₂S) ceramics** [14091-49]
- 14091 1B **Eu³⁺-doped Y₂O₃ thin films for magnetic dipole-based spectroscopy** [14091-50]
- 14091 1C **Polymer-based nanocomposite materials co-doped with core-shell CdSe/ZnS quantum dots and lanthanides for photonic applications (Invited Paper)** [14091-51]

NIR SOURCES

- 14091 1D **High-power O-band bismuth-doped fiber amplifier (Invited Paper)** [14091-52]
- 14091 1E **Phase investigation of multimode-interference-based multispot patterns in square-core fibers** [14091-53]
- 14091 1F **Highly energy-efficient 12-core erbium-doped multicore fiber amplifier system for telecommunications** [14091-54]
- 14091 1G **Radio frequency-resolved relative intensity noise characteristics of conventional high-power CW Yb-doped fiber laser systems** [14091-55]

MIR SOURCES AND DEVICES

- 14091 1H **All-fibre ring cavity laser emitting at a wavelength of 2.8 μ m enabled via low-loss fluoride optical fibre couplers (Invited Paper)** [14091-56]
- 14091 1I **Efficient pump delivery for mid-infrared fiber lasers** [14091-57]
- 14091 1J **Broadly tunable erbium fluorindate glass laser at 2.8 μ m** [14091-58]

- 14091 1K **Direct laser writing of power splitters with controlled splitting ratio for mid-infrared applications** [14091-59]
- 14091 1L **Investigation on a passively Q-switched laser based on a Er³⁺-doped ZBLAN fiber for mid-IR emission** [14091-60]

PULSED SOURCES

- 14091 1M **High-repetition rate THz pulse generation in a laser-enhancement cavity locked system (Invited Paper)** [14091-61]
- 14091 1O **Data-driven control and optimization of mode-locked lasers with reinforcement learning** [14091-63]
- 14091 1P **Mode-locked lasers with ion-exchanged waveguides on Er-Yb doped glass** [14091-64]

POSTER SESSION

- 14091 1R **Ultra-narrow linewidth fiber laser based on saturable absorber and randomly distributed weak feedback** [14091-66]
- 14091 1S **Ultra-sharp edge distributed spectral filtering in optical fibers** [14091-67]
- 14091 1U **Optimization of acquisition time by using parameters determination method for laser inter-satellite links** [14091-69]
- 14091 1W **Boron co-doped silica based fiber with an ultra-high ytterbium concentration** [14091-71]
- 14091 1X **Thermo-responsive multilevel hybrid encryption device with adaptive tunability** [14091-72]
- 14091 1Z **Composite phosphors with the possibility of shaping luminescence in the optical range of 0.7-1.7 μ m** [14091-75]
- 14091 20 **Development of a compact, eye-safe, ultra-long-range laser rangefinder module** [14091-76]
- 14091 21 **Preparation, characterization, and properties of nanocomposites based on α -Zn₂SiO₄ glass ceramics for photonics** [14091-77]
