Volume 14095

Proceedings of SPIE 0277-786X, V. 14095

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Neurophotonics III*, edited by Tomáš Čížmár, Tommaso Fellin, Proc. of SPIE 14095, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

NEUROPHOTONIC APPLICATIONS

- 14095 02 **Patient-specific intraoperative resting-state RGB parcellation framework for contextualising direct cortical stimulation** [14095-4]
- 14095 03 **Hyperspectral characterization of hemodynamic and metabolic responses in the mouse brain during oxygenation alterations** [14095-6]

DEEP-BRAIN IMAGING

- 14095 04 **Nanostructuration of optical fiber probes using atmospheric plasma jet synthesis of plasmonic enhancers towards label-free spectroscopy of neurochemicals in deep brain regions** [14095-11]

NONLINEAR APPROACHES I

- 14095 05 **In vivo two-photon imaging of the mouse brain with intraparenchymal light collection through a thin tapered optical fiber (Invited Paper)** [14095-14]
- 14095 06 **All-optical manipulation of retinal circuits in non-human primate explants** [14095-15]

NONLINEAR APPROACHES II

- 14095 07 **Effect of tissue thickness on epidection of backscattered third harmonic generation signals in mouse brain tissue** [14095-16]

OPTOGENETICS

- 14095 08 **A quantitative framework for visible-light uncaging of neurotransmitters: linking optical control of glutamate release to neuronal spiking** [14095-19]
- 14095 09 **Low-loss hybrid polymer waveguide neural probes for visible-wavelength optical neuromodulation** [14095-22]
