Volume 14101

Proceedings of SPIE 0277-786X, V. 14101

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Organic Electronics and Photonics: Fundamentals and Devices V*, edited by Koen Vandewal, Wouter Maes, Sebastian Schellhammer, Proc. of SPIE 14101, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Conference Committee*

ORGANIC LUMINESCENCE I

- 14101 02 **Adjusting emission distribution and efficiency of tandem organic light emitting diodes via transport layers and emission layer sequence modulation** [14101-7]

ADVANCED ORGANIC SEMICONDUCTING MATERIALS: SYNTHESIS AND CHARACTERIZATION

- 14101 04 **Biosourced divanillin-thiazolothiazole polymers for organic electronics: toward sustainable technological solutions** [14101-12]

EXCITONICS AND POLARITONICS

- 14101 05 **All-solution-processed organic DFB lasers for efficient light generation and optical sensing** [14101-20]

POSTER SESSION

- 14101 06 **Fabrication and characterization of organic metasurfaces for photonic devices** [14101-37]
- 14101 07 **Two-fold increase in blue MR-TADF OLED stability via perdeuteration of the emitters** [14101-38]
- 14101 08 **Bipolar DPQ-derived acceptors enabling ultra-low-voltage and high-luminance red PhOLEDs** [14101-39]
- 14101 09 **Phase- and orientation-dependent fluorescence of DAST crystals for photonic sensor applications** [14101-43]
- 14101 0A **High-performance all-inorganic tin-based perovskite solar cell with engineered transport layers: a simulation study** [14101-48]
- 14101 0B **Whispering-gallery-mode optical interferometer using organic crystal microring resonators** [14101-53]
